Rob,

Applications 83288 and 83315 were both amended shortly after they were originally filed. Each of these applications includes an amended Page 3, revising the proposed place of use descriptions. These amended page 3s do not include initials or signatures. It appears the amendments may have been prepared while IDWR (Cooper Fritz) was working with Jason Helms to address deficiencies. While conducting the final review, I noticed a few discrepancies between the amended page 3s and the associated maps.

I have prepared corrected Page 3s for Applications 83288 and 83315. The revised place of use descriptions match the shapes depicted on the attached maps. If these amended pages correctly describe the proposed places of use, would you please initial the page 3s and email them back to me. I am prepared to issue the approvals when the corrected Page 3s are filed.

Please note, the other application (83340) is different. It does not propose to combine 35-2824 with an existing right. It only proposes to cover the corners of the pivot located in SWSE/SESE of Section 17 and the NWNE/NENE of Section 24. If the transfer is approved as filed, there will still be two mini pivots which are not covered by any water right in Section 24, T09S, R28E and Section 19, T09S, R29E. Jason has been working on a WSB rental. These mini pivots could be covered through the WSB rental.
