Tim,

To put it very simply, Laguna Point is in violation of their water right. If you are unable to report this information to my office weekly I would recommend that you have one of the homeowners make it a point to stop by the pump house, record the flows and e-mail the data to my office.

I have been willing to work with these subdivisions on the Graham Gilbert diversion. However, after three years of non-compliance it is time that they operate as required by the conditions of the water right.

I will allow you a grace period for the remainder of this water season which will end October 15, 2012 to install your new equipment. Beginning with the water season 2013 (April 1, October 15) the reports must be submitted weekly in order to protect the water right.

I would recommend you forward a copy of this message to the Homeowners Association so they are aware of the possible ramifications of non-compliance.

Rex,

As I knew it would be, the process of manual weekly checking of the meter at Laguna Pionte was simply not feasible. I have been working diligently towards having an upgraded flow meter installed so that a remote monitoring (cellular/web based) system will provide daily or weekly (however you want it) usage readings. The cost of this upgrade will be around \$1,000. I apologize for not keeping you updated, but please believe me when I say that I am working towards a solution that will ultimately be far easier, accurate and convenient for the both of us. I will keep you updated when I know more, but the meter has already been ordered and will hopefully be installed very soon.

Tim,

I have not received any data for awhile?
