Subject: RE: Amending Recharge Application

I think submitting a new form would probably be the cleanest (new applicant, address, POU attachment, signature, etc.).

When you get a chance, could you give me a call? I wanted to talk about another item related to this application.

Thanks,

Corey

Exactly what I was thinking. Do you want us to take the original application and mark it up in traditional fashion? Or submit something new?

Subject: Amending Recharge Application

Mr. Barker,

We talked earlier today about amending application for permit 37-23018, now in the name of South Valley Ground Water District. I had mentioned the possibility of amendments to the place of use possibly impacting the priority date. I was recalling a section in the water appropriation rules (available at the following link)....

<https://adminrules.idaho.gov/rules/current/37/370308.pdf>

On page 8, are some rules discussing amended applications. Specifically, Rule 035.04.c states....

An amendment which increases the rate of diversion, increases the volume of water diverted per year or the volume of water depleted, lengthens the period of use, or adds an additional purpose of use shall result in the priority of the application for permit being changed to the date the amended application is received by the department.

Since an amendment to the Place of Use is not specifically listed here, I think you should be good to go.

Submit an amended, signed, application and request processing and we should be able to get things started on the processing front.

Corey
