Subject: spring creek for mitigation water from arco canal
Attachments: moncur spring creek.pdf

Here is the map attached showing the place where there is an existing head gate and measuring device (according to the Water Master) for recharge and for the water transfers we are suggesting. The point of diversion is at the top of section map number RP04N26E260100 at the top of the referenced area in faint blue. There are 3 ditches coming out of the Arco canal onto a pivot onto spraker (Moncur) land. The far right is the Arco canal. The middle one is the center ditch. And the left one is the existing recharge site in Spring creek where the water would be sunk into the ground. I talked to Lukas the water master and he told me he is fine with this concept. I am currently in the process of getting the land owners approval. I have contacted Bill Moncur and he has given me the verbal approval and will sign a paper I sent him and send it back. I will get you a copy of the signed document as soon as I get it back.. Thanks for all your work on this. Jim Rindfleisch
