

**STATE OF IDAHO  
DEPARTMENT OF WATER RESOURCES  
BENEFICIAL USE FIELD REPORT**

#### A. GENERAL INFORMATION

**Permit No:** 36-8299  
**Exam Date:** 11/15/2012, 10/24/2019

- 1. Current Owner:**

BLIND CANYON AQUA RANCH INC  
2775 S 1050 E  
HAGERMAN ID 83332

2. Accompanied by: In 2012: Cindy Yenter, IDWR, and Gary Lemmon.  
In 2019: Michelle Richman, IDWR, and Gary Lemmon.  
Phone No: 208-280-4808  
Address: same as above  
Relationship to permit Holder: Permit Holder

### **3. SOURCE:** **SPRINGS** **GROUND WATER**

## Tributary SINKS

**Method of Determination:** During both field exams, noted tunnel excavated into canyon wall with water flowing out. Spring water was observed pouring from the canyon wall along the length of the collection ditch.

#### **B. OVERLAP REVIEW**

- #### 1. Other water rights with the same place of use:

<b>Water Right No.</b>	<b>Source</b>	<b>Purpose of Use</b>	<b>Basis</b>
36-7831	Springs	Fish Propagation	Decree

Comments: 36-7831 is the original right diverted from the springs complex.

- ## 2. Other water rights with the same point-of-diversion:

<b>Water Right No.</b>	<b>Source</b>	<b>Purpose of Use</b>	<b>Basis</b>
36-7831	Springs	Fish Propagation	Decree
36-4026	Springs	Stockwater, domestic	Decree

Comments: 36-7831 and 36-4026 list only springs as their point of diversion.

## C. DIVERSION AND DELIVERY SYSTEM

- 1. LOCATION OF POINT(S) OF DIVERSION:**

SPRINGS NE $\frac{1}{4}$  NW $\frac{1}{4}$  NE $\frac{1}{4}$ , Sec. 17, Twp 08S, Rge 14E, B.M. GOODING County  
GROUND WATER NW $\frac{1}{4}$  NE $\frac{1}{4}$  Sec. 17, Twp 08S, Rge 14E, B.M. GOODING County

Method of Determination: ArcMap aerial imagery and site visit

PLACE OF USE: FISH PROPAGATION

Method of Determination: ArcMap aerial imagery and site visit.

3.

Delivery System Diagram Attached (required). Indicate all major components and distances between components.  
 Indicate weir size/pipe as applicable.

Map Attached Showing Location(s) of point(s) of diversion and place(s) of use (required). Scale must be  
 1:24,000 or greater.

Aerial Photo Attached (required for irrigation of 10+ acres).

Photo of Diversion and System Attached

4.

Well or Diversion ID No.*	Motor Make	Hp	Motor Serial No.	Pump Make	Pump Serial No. or Discharge Size
None					

#### D. FLOW MEASUREMENTS

1.

Measurement Equipment	Type	Make	Model No.	Serial No.	Size	Calib. Date
Flow Tracker	Acoustic Flow meter			P841		

2. Measurements: Michelle Richman made a flow measurement of the tunnel discharge by wading the outlet with the Flow Tracker. We also made measurements at the group of 6 weirs at the outlet of the fish facility to determine the total flow rate of the facility.

#### E. FLOW CALCULATIONS

Additional Computation Sheets Attached

Measured Method: The tunnel measurement yielded a flow rate of 14.14 cfs, and the weir at the facility outlet measured 36.62 cfs, so it is appropriate to license the right at the permitted rate of 14.2 cfs, with the sources being ground water and springs. The high flow recorded at the facility during the development period was 42.4 cfs in 2002, so sufficient flow occurred then to allow for the existing right, 36-7831, at 25.0 cfs, and for this permit at 14.2 cfs.

#### F. VOLUME CALCULATIONS

1. Volume Calculations for irrigation: NA

$$V_{IR} = (\text{Acres Irrigated}) \times (\text{Irrigation Requirement}) =$$

$$V_{DR} = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation season}) \times 1.9835 =$$

$$V = \text{Smaller of } V_{IR} \text{ and } V_{DR} =$$

2. Volume Calculations for Other Uses: The highest volume year during the development period of the permit was 2002. Daily flow records were obtained from Cindy Yenter, the Watermaster of WD-130 at the time of the 2012 field exam. To determine the volume for this permit, the daily flow rates for that year were reduced to the total flow of this permit (14.2 cfs) (see 'Ten Springs daily flows reduced to 39.2 cfs, with resulting volumes' in this report) and the existing fish propagation right, 36-7831 (25.0 cfs), which is 39.2 cfs, if they exceeded that amount. The flows are measured as the water exits the fish facility. The adjusted volume for that year was 23,598.4 acre-feet. The portion of the total which would be attributed to permit 36-8299 would be calculated as:  $14.2/39.2 \times 23598.4 = 8548.4 \text{ AF}$ .

#### G. NARRATIVE/REMARKS/COMMENTS

The field exam for permit 36-8299 was done in two parts, the first on November 15, 2012 with Cindy Yenter, IDWR (WD-130 Watermaster at the time) and permit holder Gary Lemmon. At that time, only the outflow at the tail end of the facility was measured, but it was determined in consultation with IDWR Southern Region that the ground water source would need to be measured separately, in addition to measuring the total diversion amount. The permit was held, awaiting a measurement, until October 24, 2019, when Michelle Richman, IDWR, and I were accompanied by Gary Lemmon to make the necessary measurements. Ms. Richman is an engineer at Southern Region with expertise in open channel measurements.

The application for this permit was filed on April 19, 2001, and was amended on October 18, 2001, so the priority date was advanced to that date. It was advanced again, to October 21, 2001, to reflect the fact that proof of beneficial use was submitted three days late.

The permit was originally filed for 20.0 cfs, but was reduced to 14.2 cfs because the maximum flow out of the facility at the time was 39.2 cfs; so with the flow rate of the existing right at 25.0 cfs, this left only 14.2 cfs available for permit 36-8299. The high flow and volume year of 2002 produced a maximum flow rate out of the facility of 42.4 cfs, which is sufficient to satisfy the existing right (25.0 cfs) and this permit (14.2 cfs) (see 'Ten Springs diversion data for 2002 – high year').

The water for this permit is sourced from the springs complex and from a constructed horizontal tunnel, which Mr. Lemmon indicated was excavated in 1979 or 1980 by his father. He estimated the tunnel dimensions as: approximately 150' long, 4.25' high, and 2.5' wide. The tunnel is located at the far south (upstream) end of the springs collection ditch. Mr. Lemmon indicated that the tunnel was excavated at the point in the springs complex where the highest spring flow was occurring. Because no measurements were made of the spring flow from that area before the tunnel was dug, it is not possible to quantify how much of the flow from the tunnel is spring flow and how much is ground water. Thus, no differentiation is attempted in this report and licensing.

Water from the tunnel flows in a ditch along the face of the canyon wall where it co-mingles with spring water flowing out of a long horizontal fracture in the basalt. Pipes then carry the water down slope into the fish propagation facility which consists of 48 concrete raceways and several earthen ponds. The permit holder estimates the total volume of the facility at 383000 cubic feet. After leaving the raceways, the water flows into a settling pond where the solids are removed. Water then flows off the property and over the canyon wall where it sinks into the talus slope or flows into the Snake River.

On the day of the 2019 field exam, the discharge from the tunnel was measured at 14.14 cfs (see 'Discharge Measurement Summary' included with this report). The entire flow rate through the fish facility that day was 36.62 cfs (see 'Ten Springs Flow Readings – 10/24/2019', also included with this report). The volume was calculated by totaling the daily volumes from that year, with reductions down to 39.2 cfs (the total flow rate of this permit and right 36-7861) on days when the flow exceeded that number. The calculation is detailed in the Volume Calculations section of the Beneficial Use Field report.

Permit conditions appear to have been complied with and with the entire tunnel flow measured at 14.14 cfs, it seems appropriate to license at the permitted rate of 14.2 cfs with the source as springs and ground water.

Mr. Lemmon requested that a copy of a March 16, 2004 letter from the Water District 130 Watermaster be included in the field report for informational purposes, so it has been, and is labeled as 'Watermaster Letter, 2004'.

Have conditions of permit approval been met?  Yes  No

#### H. RECOMMENDATIONS

##### 1. Recommended Amounts

<b>Beneficial Use</b>	<b>Period of Use</b>	<b>Rate of Diversion</b>	<b>Annual Volume</b>
FISH PROPAGATION	01/01 to 12/31	14.20 CFS	8,548.4 AF

Totals: 14.20 CFS 8,548.4 AF

##### 2. Recommended Amendments

Change P.D. as reflected above  Add P.D. as reflected above  None

Change P.U. as reflected above  Add P.U. as reflected above  None

#### I. AUTHENTICATION

RE: Water Right No. 36-8299

Dear Gary:

Blind Canyon Aqua Ranch was included in a mailing of a Notice of Curtailment dated February 26, 2004. This notice was sent in compliance with an Order issued by the Department of Water Resources on February 25, 2004, in the matter of distribution of water to a water right within Water District No. 130 with a date of priority of 7/13/1962. The notice was sent to holders of junior priority ground water rights with points of diversion which are within the boundaries of Water District No. 130.

The above water right permit held by the Blind Canyon Aqua Ranch, authorizes appropriations from a ground water source with date of priority 10/18/2001. However, this permit does not allow construction of a well, and was issued for additional development of a source locally known as Ten Springs. Water use under this permit is entirely nonconsumptive, and will not be subject to curtailment pursuant to IDWR's February 25, 2004 Order.

Please contact me if you have any questions.

Regards,

Cindy Yenter  
Watermaster  
Water District 130
