Angie,

Thanks - the explanation for the POI & POR make sense and that draft is now acceptable. The other question is for you to simply agree that the Attachment 7b (copy attached here) correctly identifies the 74 acres that are to be dried up for the pond expansion. If your answer is yes, then that draft is also correct. Then you should be able to send out approvals as preliminary orders for final review by Ann and me. Make sense?

Jim

Roxanne,

The source of Water Right 73-2147 are springs in the S1/2 of Sec 29 and the NWNW of Sec 33. Based on Cindy Yenter's watermaster recommendation (scanned to water right file 73-2147) that characterizes her site visit of the diversion works, the spring water is ultimately injected into Spring Creek and re-diverted from Spring Creek at the point the applicant is proposing as the new point of diversion in the transfer application. The points of injection and re-diversion are recommended on the transfer approval as they more clearly describe the diversion system and the proposed new point of diversion (re-diversion point) from Spring Creek. I hope this address the question on Transfer No. 83193.

I will continue my in-depth review of the expansive documents related to Transfer No. 81964 to address your previous request asking that I confirm the acres dried up as part of the nature of use change. I will communicate the results of that effort to you via email (rbrown.boise@gmail.com) and to Jim via email (jim@speckandaanestad.com <mailto:jim@speckandaanestad.com>). As part of my next communication, I anticipate setting a new timeline for review of the draft approvals for Transfer No. 81964 and 81963 considering it is my understanding Ann Vonde was waiting for the applicant's review to conclude before she begins her review.

Please let me know if you have additional questions. I wish you safe travels on your adventure to Vietnam.

Regards,

Angie

Angie - At Jim Speck's request, I am reminding you I will be out of the country from Friday, February 7, until March 2. I will be unavailable via phone or email until perhaps February 9 and expect email to be somewhat unreliable for the rest of my time in Vietnam.

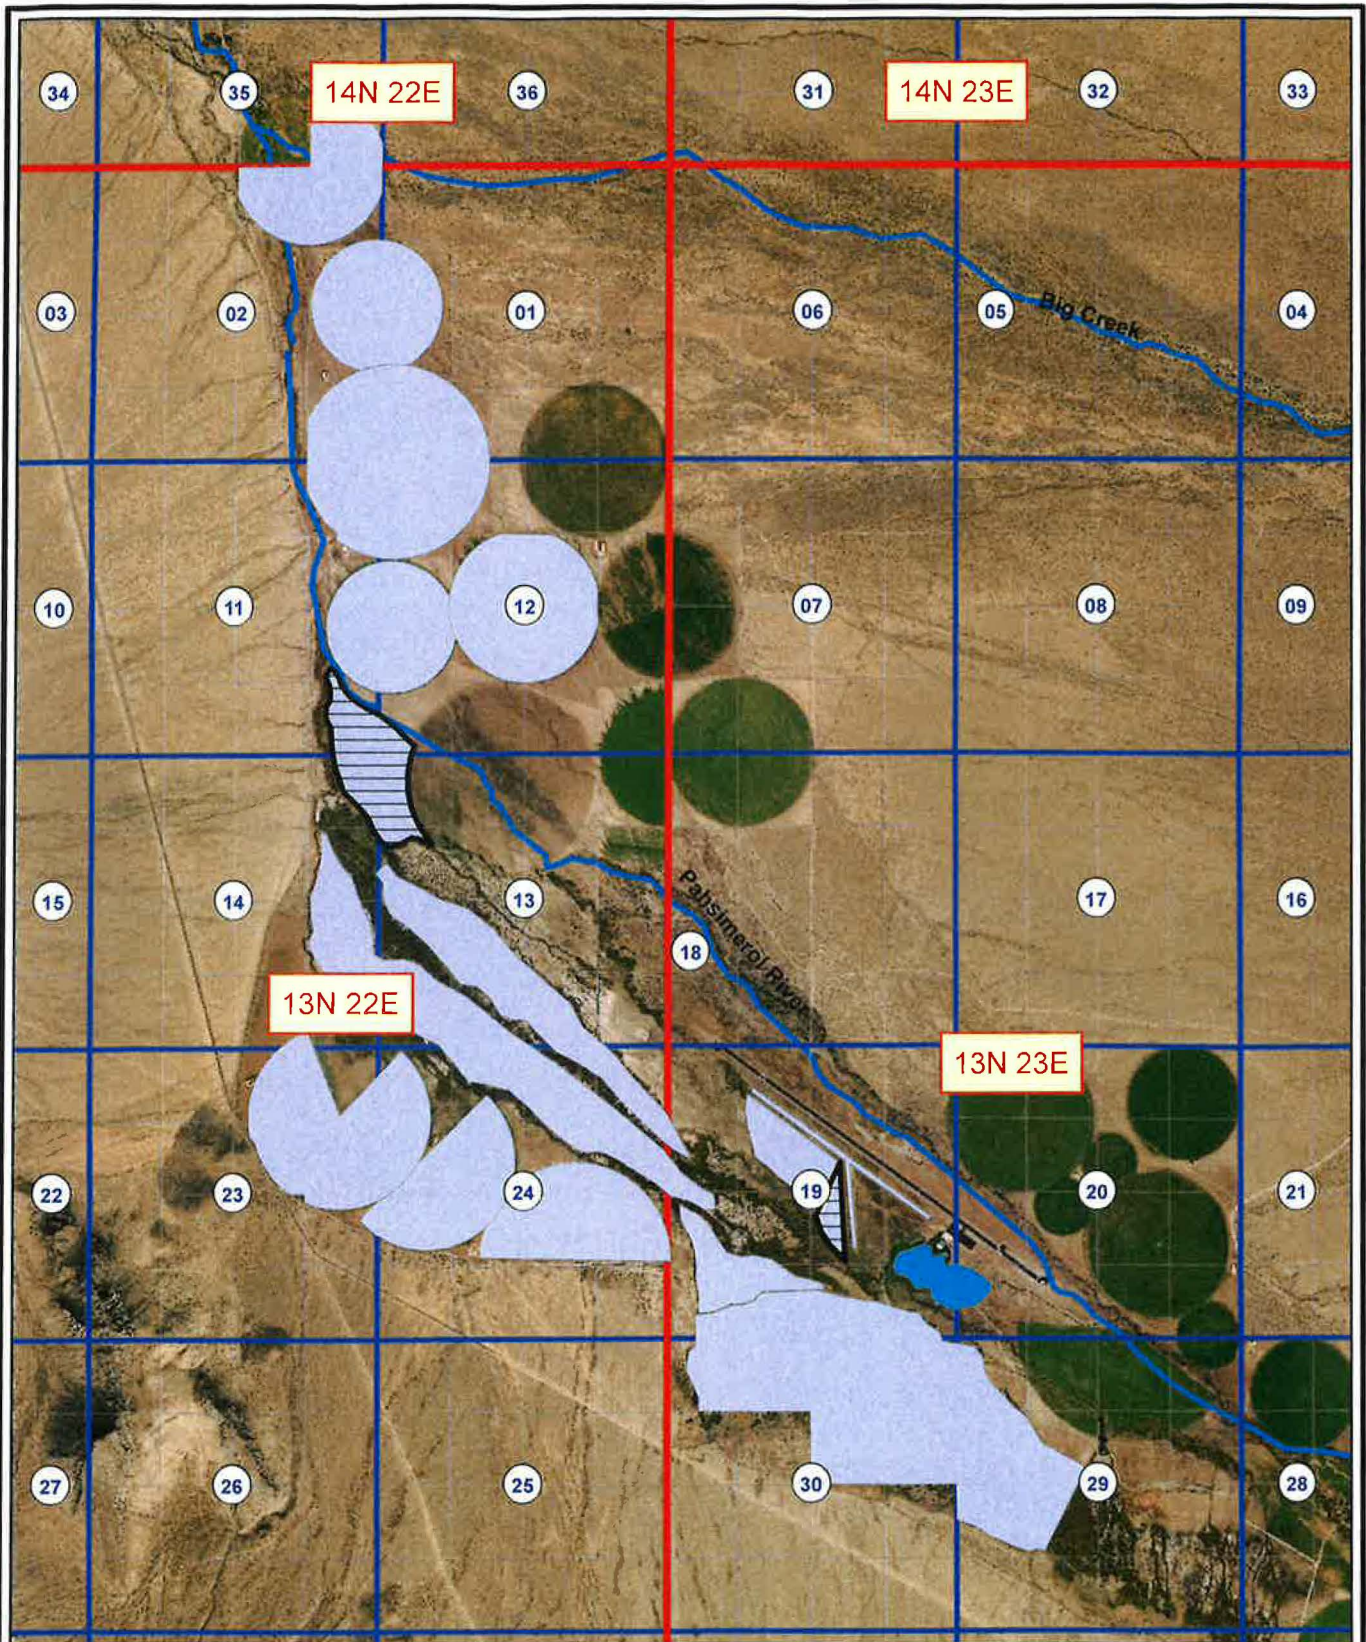

Please call me to discuss the final issue which concerns the inclusion of points of diversion and rediversion as described in my last email. I recognize you are busy, but please understand these applications have been under review for a very long time and our client needs closure on these matters. After all, the applications were prepared in response to a letter from Tim Luke threatening a Notice of Violation.

Please use my cell phone or personal email:

Thank you, Angie. That was a great explanation and I agree with Jim there is no lingering question on the transfer of 73-2147. Also, confirming that IDWR and FJR agree on the designated acres to no longer irrigate will finish our questions.

Thanks again for your work on this one.

Roxanne

Subject: RE: Question concerning transfer of water right 73-2147 (Flying Joseph Ranch)

Roxanne,

Not off-hand. I need to take another deeper dive into the files considering my review so far I'm still not able to address your first question regarding confirmation of the acres dried up for the NOU change. I sincerely apologize this review is taking so long. With the holidays and now legislative session my time is being taken up by other priorities. However, I have next Friday 100% dedicated to this filing and I WILL resolve some of these questions by if not before then. I appreciate your continued patience as I get further up to speed on these filings. There was a lot that happened over the course of the last few years during review of the files and unfortunately that institutional knowledge walked out the door last fall.

Thanks,
Angie

Subject: Question concerning transfer of water right 73-2147 (Flying Joseph Ranch)

Angie –

We have a question concerning the draft of Transfer 83193. It appears a point of injection and point of redirection have been added to the water right. Can you explain this addition?
