RE: Permit No. 63-32423 Notification to report amount of water diverted annually & 2019 Mitigation Plan Comments

Dear Permit Holder:

The Department of Water Resources (IDWR) approved Permit No. 63-32423 with the following condition:

After specific notification by the Department, the right holder shall report to the Department the amount of water diverted annually in connection with this right.

Please consider this letter notification by IDWR to begin reporting the amount of water diverted annually in connection with Permit 63-32423. This report can be included with future Mitigation Plan submittals.

IDWR has reviewed the above referenced 2019 Mitigation Plan for Permit 63-32423 submitted to IDWR on December 02, 2019, by SPF Water Engineering (SPF) and have a few comments/suggestions for future mitigation plans:

For the 2021 Mitigation Plan, verify that your 2020 diversion volume projections are greater or equal to actual diversion volumes.

Clarification on Attachment B, Mitigation Planning Map Figure as to what "Acres Available for Mitigation" (yellow hashed marks) represents. The aerial photo appears to be from 2018, and may be misleading as to what was actually irrigated or mitigated in 2019. Revise the legend to indicate the acres that will be utilized for mitigation for a given year.

Based on our review, the mitigation requirements for Permit 63-32423 are currently being met. We anticipate that SPF will submit the 2020 Mitigation Plan on behalf of the permit holder by February 15, 2020.

If you have any questions in regard to this matter, please do not hesitate to contact me.

Sincerely,

ASHLEY RITTER
Associate Engineer
