Narrative of Proposed Application for Transfer

W T Williams Inc.

Water Right Nos. 33-2041, 33-2069, 33-4000, 33-4001, 33-4002, 33-10986 are appurtenant to property owned by W T Williams Inc. Table 1 includes a list of all water rights proposed in this transfer, their acreages, and limitations. Each group is partially overlapped by another group of rights as shown in Attachment #7b. Because of the overlap, IDWR issued combined use limitations to prevent the overall diversion from exceeding the standard allowable amounts (i.e. 0.02 cfs/acre and 3.5 afa) on each described place of use.

Table 1.

WR Number	cfs	Total Ac	Ac Limit	cfs/ac	Notes
33-4001	3.3	243		0.014	Overlapped by 33-4000, 33-4002, 33-2041 on 53 ac
33-2069	4	243	200	0.02	
<i>Total</i>	<i>4.86</i>	<i>243</i>		<i>0.02</i>	
33-4000	3.64	364		0.010	Overlaps all other rights on different acres.
33-4002	3.06	364		0.008	
33-2041	3.89	364	317	0.012	
<i>Total</i>	<i>7.28</i>	<i>364</i>		<i>0.02</i>	
33-10986	1.96	156		0.013	Completely overlapped by 33-4000, 33-4002, 33-2041
<i>Total</i>	<i>3.12</i>	<i>156</i>		<i>0.02</i>	

Based on the decreed acres under each water right, the total irrigated acres are 554 acres, accounting for all overlapping acres. Each right authorizes diversion of 0.02 cfs/acre. Although there is not a combined use limitation for all of these rights together when irrigating all 554 acres, it is assumed that the total diversion rate authorized would be limited to 0.02 cfs/acre, or 11.08 cfs.

This transfer proposes to add a point of diversion and to combine the POUs for the water rights into a permissible place of use.

W T Williams Inc. proposes to reconfigure irrigated acres by retiring pivot corners and including lands that are now covered under center pivot systems. The application proposes to form a Permissible Place of Use that will include the existing lands and other lands owned by applicant that are operated under the same irrigation system. The proposed PPU covers 629 acres with a limit of 554 irrigated acres, designated on Attachment #7a, at a diversion rate of 11.08 cfs and a volume of 1939 afa.

Table 2 includes an evaluation of the acres per QQ, including the decreed acres (including the overlapping water rights), the proposed irrigated acres, and the changes per QQ resulting from this transfer.

The new POD is an existing well that has not been connected to a system for many years. It still has a pump installed but has no power access currently. Applicant has an easement granted from the property owner to access the well and install pipe to connect to the existing mainline for the system.

5. General Information:

- a. Describe the complete diversion system, including how you will accommodate a measuring device and lockable controlling works should they be required now or in the future:

Existing PODs are connected to mainline. New well will be connected to the mainline also upon approval of this transfer. There is likely a measuring device on the wells, but if not one can be added.

- b. Who owns the property at the point(s) of diversion? Little Lost River Land & Cattle owns new well location

If other than the applicant, describe the arrangement enabling the applicant to access the property for the diversion system:
Applicant has agreement with neighbor allowing easement to use and connect to the proposed well.

- c. Are the lands from which you propose to transfer the water right subject to any liens, deeds of trust, mortgages, or contracts?

If yes, ☐ attach a notarized statement from the holder of the lien, deed of trust, mortgage or contract agreeing to the proposed changes on official letterhead signed by an authorized representative. Label it **Attachment #6**. List the name of the entity and type of lien: NA

It is the applicant's responsibility to provide notice to lien holder, trustee, mortgagor, or contract holder of the proposed changes that may impact or change the value of the water rights or affected real property. Any misrepresentation of legal encumbrance on this application may result in rejection of the application or cancellation of an approval.

- d. Are any of the water rights proposed for transfer currently leased to the Water Supply Bank?

If yes, ☐ complete Attachment WSB. **NA**

- e. Describe the effect on the land now irrigated if the place or purpose of use is changed pursuant to this transfer:

52 acres will be retired from ground water irrigation to expand the POU to additional acres. The retired acres will still be irrigated from Blaine County Canal Company shares

- f. Describe the use of any other water right(s) for the same purpose or land, or the same diversion system as right(s) proposed to be transferred at both the existing and proposed point(s) of diversion and place(s) use:

Surface water rights from the Blaine County Canal Co. overlap the existing and proposed POUs. No other water rights at the PODs.

- g. To your knowledge, has/is any portion of the water right(s) proposed to be changed:

Eastern Snake Plain Aquifer Modeling Analysis

W T Williams Inc

The Applicant proposes to add a new POD to the existing water rights, which currently include eight wells. All eight existing wells are connected to a mainline that delivers water to the place of use. The existing wells already operate as a single system, therefore, a weighted centroid was established for the purposes of evaluating modeling effects. The values for weighting the centroid for the existing wells were based upon well capacities found in the IDWR water right backfiles. They were either directly measured by a field agent or determined through theoretical means. The wells shown in Figure 1 are identified by the diversion rate (cfs) determined by IDWR.

The new POD is an existing well. However, no well log could be found and no information was available that was reasonably attainable for determining the well capacity. A new centroid, including the existing wells and the new well, was determined using the mean of the existing well capacities as the anticipated capacity of the new well.

Both of the weighted centroids are in the same grid cell. No modeling analysis is required.
