

MEMORANDUM

To: Water Right File No 01-10576
From: Ashley Ritter
Date: June 17, 2019
Re: Reporting Requirements Review

Intro

On June 3, 2017, North Side Canal Company, Ltd. (North Side) submitted Proof of Beneficial Use Form for Permit 01-10576 along with supporting power generation documentation. Permit 01-10576 requires proof of application of water to beneficial use to be submitted no sooner than March 1, 2019, and no later than March 1, 2020.

Permit 01-10576 Condition of Approval two (2) states:

"To facilitate determination of the volume of water beneficially used by this project, the right holder shall provide IDWR a copy of the characteristic performance curve for the turbine(s) and a copy of the monthly generation from the development period. These items shall be submitted with the required Proof of Beneficial Use statement. Failure to submit these items shall be cause for the Director to reject the Proof of Beneficial Use statement."

Permit 01-10576 Condition of Approval three (3) states:

"Prior to diversion of water under this right, the right holder shall install and maintain a measuring device and lockable controlling works of a type acceptable to the Department as part of the diverting works at the Snake River. In addition, the right holder shall install a measuring device that can be used to determine the instantaneous rate of flow of water used to generate power, or the right holder shall provide to the department a flow rate measurement or computation made by a certified water right examiner in accordance with actual system design and operation."

Conclusions

Northside provided the product brochure with characteristic performance curve for the installed turbines and the monthly power generation from May 2015 through April 2019 (during each year's period of use 3/15 to 11/15). I called Alan Hansten, General Manager for North Side to confirm the units and abbreviations on the submitted power generation documentation. Mr. Hansten confirmed that the total generation is reported in kilowatt hours, HL stand for heavy load, and LL for light load. Mr. Hansten also stated that the system has eight (8) turbines and that each turbine has a maximum power generation of 160 kilowatts.

Northside stated that a measuring device and lockable controlling works already exists at Milner Dam where the water that supplies the hydropower plant is diverted from the Snake River. Flow data was able to be obtained using the Departments Water Rights Accounting Resource for 2015 through 2019. Data was obtained from site 130870000, Northside Twin Falls Canal at Milner.

The reporting requirements for the above permit has been satisfied.

RE: Water Right Permit 01-10576 Licensing

Dear Sir/Madam,

Please find enclosed the Statement of Completion, Idaho Power monthly generation reports for the Head of the U Hydro project water right permit 01-10576, and a check for \$600 for the license examination fee. The following are responses to the water right permit conditions #2 and #4:

Condition #2:

Copies of the monthly generation reports from Idaho Power Company are included with this letter. The equation (performance curve) used by the control system to calculate the flow through each turbine is: $Q = 0.997 \times P_g + 0.6$ where Q is the flow rate in cubic feet per second and P_g is the power generation in kilowatts.

Condition #4:

A measuring device and lockable controlling works already exists at Milner Dam where the water that supplies the hydro plant is diverted from the Snake River. Flow rate at the power plant is determined using the equation shown under Condition #2 above.

When the Idaho Department of Water Resources staff is ready to conduct a field exam of the project or if they have any questions, they may contact me at (208) 324-2319.

Sincerely,

Alan W. Hansten
General Manager

Idaho Power Monthly Generation Reports
\$600 Check for License Exam Fee

TM MODULAR MICRO TURBINE

Head of the U HPP 8 x TM10

Located in Idaho, the Head of the U HPP is the first installation in the USA of Mavel's proprietary modular micro turbine.

Head of the U HPP Parameters

Turbine.....	8 x TM10 Modular Micro
Head.....	5.14 meters (16.9 ft)
Flow.....	34 cms (1,200 cfs)
Power.....	1,224 kW

The Head of the U Project is a new hydroelectric power plant on the North Side Canal system that delivers irrigation water to area farmland near Jerome, Idaho. The project site is a diversion structure that divides the flow of the main canal into three branch canals. These are then divided to provide flow to each of the eight TM10 Modular Micro Turbines.

MAVEL'S **TM MODULAR MICRO TURBINES** are designed for sites with low flow and low head conditions. Easily installed, the TM Turbines are a modular system used to capture the energy of water flowing through the turbine.

The proprietary TM Turbine design uses siphon technology and includes a Kaplan-type runner with four manually adjustable blades. The runner is connected to an asynchronous generator directly or by a belt drive. This allows for turbine and generator speeds to be optimized for the site condition. The TM Turbines do not require an enclosed powerhouse and can be installed on support brackets attached to a weir structure.

The TM Turbines come in four sizes and are suited for sites with flow of 0.15 to 5 cms (5 to 177 cfs) and heads of 1.5 to 6 meters (5 to 20 ft). Individual turbines have installed power from 5 kW to 160 kW and are often installed as multiple units.

The TM Turbine's features include:

- modular design
- no powerhouse requirement
- manual blade adjustment
- siphon technology
- robust construction
- short delivery times
- proven performance

Over the past 25 years, Mavel has installed over 65 TM Turbines globally at sites in Bulgaria, Czech Republic, Finland, Germany, Japan, Italy, Latvia, Poland, Slovakia, Slovenia, Ukraine and the USA. The first American installation was completed in 2015.

Mavel's TM10 Modular Micro Turbine

Kyoto HPP

1 x TM5

Mavel's TM5 Micro Turbine is used to light up the historic Togetsukyo Bridge and nearby hillside in Kyoto, Japan.

Kyoto HPP Parameters

Turbine.....	1 x TM5 Modular Micro
Head.....	1.34 meters (4.4 ft)
Flow.....	0.55 cms (18.7 cfs)
Power.....	4 kW

Mavel's TM5 Modular Micro Turbine was installed adjacent to the historic Togetsukyo Bridge in Kyoto, Japan as a symbol of that city's commitment to clean renewable energy. The Kyoto Hydroelectric Power Plant lights up the bridge and a nearby hillside. Mavel made modifications to the standard TM5 Turbine design to respect the historic integrity of the site.

Three prototype TM10 Turbines were installed on an existing weir on the Odra River in Poland.

Olawa II HPP 3 x TM10

Olawa II HPP Parameters

Turbine.....	3 x TM10 Modular Micro
Head.....	4 meters (31.1 ft)
Flow.....	11.70 cms (397.8 cfs)
Power.....	300 kW

The Olawa II installation is at the site of a historical hydroelectric power plant on the Odra River in Southern Poland. The three TM10 Modular Micro Turbines provide a combined 300 kW and were installed directly onto the weir. They are in addition to an existing 200 kW Francis turbine in the adjacent original powerhouse.

Turbine Models

Mavel has developed four models of the TM Turbine. The four models and their operating parameters are detailed below.

Runner Diameter..... 1000 mm
Head..... 2 to 5 meters (7 to 16 ft)
Flow..... 2 to 5 cms (71 to 177 cfs)
Power..... 30 to 160 kW

TM10 TURBINE

Runner Diameter..... 850 mm
Head..... 2 to 5 meters (7 to 16 ft)
Flow..... 1.5 to 3 cms (52 to 106 cfs)
Power..... 20 to 100 kW

TM8 TURBINE

Runner Diameter..... 550 mm
Head..... 1.5 to 6 meters (5 to 20 ft)
Flow..... 0.7 to 1.4 cms (25 to 50 cfs)
Power..... 7 to 60 kW

TM5 TURBINE

Runner Diameter..... 300 mm
Head..... 1.5 to 6 meters (5 to 20 ft)
Flow..... 0.15 to 0.4 cms (5 to 14 cfs)
Power..... 5 to 20 kW

TM3 TURBINE

Individual Mavel TM Turbines produce from 5 kW to 160 kW depending on the site's head and flow.

Head and Flow Characteristics

Installation 5 Steps

The TM Turbine has a five step installation procedure.

1. Structure Preparation
2. Support Framework Installation
3. Draft Tube Installation
4. Turbine and Generator Installation
5. Commissioning

The TM Turbine is a proprietary modular design that can be adapted to unique site conditions.

Scope of Supply

A typical division of the scope of supply between Mavel and the customer is shown in the graphic illustration below.

Hydro Turbine Technology by Mavel

Kaplan

Francis

Pelton

Micro

MAVEL IS A GLOBAL LEADER IN THE DESIGN AND PROVISION of a full range of Kaplan, Francis, Pelton and micro turbines for hydroelectric power plants typically from 30 kW to 30+ MW per unit.

Founded in 1990, Mavel was one of the first companies formed under the new Czech Commercial Code. The company moved from Prague to its current headquarters in Benesov, CZ in 1993 and brought in a consortium of American / Canadian / European investors in 1997. Funds were used to upgrade facilities and purchase a historical small hydro turbine producer near Brno, CZ. The original founders of the company remain top managers with their American counterparts and are joined by a team of global hydroelectric power specialists.

Mavel produces its turbines at its 10,300 m² (110,870 sf) combined manufacturing facilities which have 40 production machines, 85 ton combined crane capacity, a 5-axis milling machine and a new 6-axis prototype machining center put into operation in late 2013.

The Company is ISO 9001:2008, 14001:2004 and 3834-2:2005 certified.

Mavel installations are now in 36 countries on five continents with over **475 turbines** ordered or installed at over 300 hydroelectric power plants around the world.
