WATER RESOURCES
WESTERN REGIONAPPLICATION FOR EXTENSION OF TIME TO AVOID
FORFEITURE OF A WATER RIGHT

Section 42-222(4), Idaho Code, provides that a water right holder may apply to protect a valid water right from forfeiture. Upon a showing of reasonable cause, the Director may grant one (1) extension of five (5) years in which to resume use.

1. Water Right No. 61-7189 (one right per application)
☒ Attach a copy of the water right record, available at <http://www.idwr.idaho.gov>, *Water Right Transfers, Step 1*, or by contacting any Department office.
2. Applicant Don and Carol McFarland Phone (208) 731-6530
3. Are you the current water right holder of record? Yes ☒ No ☐
☐ If no, provide documentation of your authority to sign on behalf of the right holder -- OR -- attach a *Notice of Change in Water Right Ownership* form along with the required documentation and fee.
4. Mailing address ☒ Same as water right record -- OR -- complete the following information:
Address _____ City _____
State _____ Zip code _____ Email _____
5. Give the last date water was beneficially used 2007
6. Explain your reasons for non-use of the water right and your reasons for requesting an extension of time.
Attach additional documentation if needed.
Potato processing became uneconomical and property including water rights was sold.

The information contained in this application is true to the best of my knowledge.

Re: Water Rights 61-2248B and 61-7189 Application for Extension of Time to Avoid Forfeiture

Dear Mr. Brockway,

On August 7, 2017, the Idaho Department of Water Resources (IDWR) received two applications for Extension of Time to Avoid Forfeiture filed on behalf of Don and Carol McFarland for water rights 61-2248B and 61-7189. Per Idaho Code § 42-222(5)(c), the Director may grant one (1) Extension of Time to Avoid Forfeiture for up to five (5) years for a water right. A previous extension was granted for each of the rights in 2012, with a resumption of use date of August 31, 2017. Therefore, the two applications received August 7, 2017 are being returned and a refund of the filing fees has been requested (refund request memo enclosed).

Furthermore, IDWR staff sent Don and Carol McFarland a request to submit a Resumption of Use form for each water right, 61-2248B and 61-7189, on June 20, 2017. The forms were requested to be submitted by the resumption of use date, August 31, 2017. Reviewing information received August 7, 2017, it appears use of these rights may have resumed in February of 2017 (Narrative in Support of Application for Extension of Time to Avoid Forfeiture paragraph 2). If this is the case, please complete the enclosed Resumption of Use forms and return to IDWR.

IDWR forms and other information are available on the Internet at www.idwr.idaho.gov. Please contact me at 208-334-2190 if you have any questions. Thank you for your attention to this matter.

Sincerely,

Angela M. Grimm, P.G.
Water Rights Supervisor

RE: Refund

Brockway Engineering PLLC paid \$200.00 for two applications for extension to avoid forfeiture on 8/7/2017. The applications were returned on 8/16/17 which eliminated the need for processing fees. A full refund should be issued.

Please issue a \$200.00 refund as follows:

Narrative in Support of Application for Extension of Time to Avoid Forfeiture

Don and Carol McFarland Water Permits 61-7189 and 61-2248B

Prepared by: Charles E. Brockway
Brockway Engineering, PLLC
Date: August 3, 2017

Both water permits were issued for potato processing at the Glenns Ferry plant and were utilized until 2007 when the plant operation was discontinued because the operation was no longer economical. The geothermal well water was utilized along with the City of Glenns Ferry municipal water within the plant. After operation ceased and water use from the well discontinued, the plant was owned by several entities until it was purchased by the McFarland's.

These changes in ownership required extended periods of time to consummate. Plant operation was commenced in February 2017 and is currently in operation for potato processing.

Currently, no waste water is being utilized on irrigated land, but as production increases, this use will be commenced.

Don and Carol McFarland

Glenn's Ferry Water Rights Review Update

Water Rights 61-7724, 61-2248B, 61-7189

Prepared by: Charles E. Brockway, PhD, P.E. Brockway Engineering, PLLC

Date: Revised August 2, 2017

A. Water Right Details

Three ground water rights are now owned by Don and Carol McFarland: 61-7189, 61-2248B, and 61-7724 applicable to the Glenn's Ferry Potato Processing project with cogeneration. All three of these rights were purchased from Brian and Cheri Baalman on December 29, 2015. Data contained herein has been obtained from IDWR current data base on August 2, 2017.

Table 1. Water Right Details-Glenns Ferry Processing Plant

B. Water Use Measurement and Reporting

Permits and historical IDWR Orders require flow monitoring and reporting of water use from the single source (well) providing water to the three water rights. Hot water use measurement and monitoring is required and reporting on an annual basis from the well is required. IDWR approved in-pipe flow meters will be required on the pipe from the well. Currently the flow meter, mounted vertically on a pipe from the well to the production facilities, was a propeller type McCrometer at the time of the beneficial use exam for water right 61-7724 (7/2//2014), IDWR metal tag No. A0010043. However, data in the IDWR WIMIS file indicates that the flow meter type has been changed periodically over the years and at one time it was a Siemens Mag Meter. The McCrometer meter is a propeller type meter which is not on the approved meter list. Only magnetic type flow meters are approved and an application for a waiver or variance will be required to secure continued use of the McCrometer meter. In addition, the accuracy of the current flow meter will have to be verified by an approved Water Rights professional. It is recommended that an approved Mag meter be installed in an appropriate location so that continued flow monitoring will be more defensible.

An Order issued by IDWR on January 22, 1999, required that water use from the well be reported every 3 months beginning February 1999, and ending April 30, 1999. In addition the diverted volume from the well under water right 61-7189 and any other water rights diverted from the same point of diversion shall be reported every three months until such time as IDWR determines that annual reporting is sufficient. It is not known if this order was followed but it is apparently still in effect, the water right report for 61-7724 on the IDWR data base is the only one of the three current published water right reports that lists reporting requirements. A minimum of annual total volume of use should be reported to IDWR and, since cogeneration is listed as a separate nature of use, the appropriate flow meter(s) will be required if cogeneration is to be utilized.

C. Forfeiture

It was reported that the potato processing at the plant terminated in 2007 and the use of hot water for cogeneration terminated in 2009, the hot water use for processing has therefore not been utilized for some 10 years and hot water use for cogeneration has not been used for 8 years. A search of the IDWR files shows that an application for Extension of Time to Avoid Forfeiture of a Water Right for water rights 61-2248B and 61-7189 was approved on September 14, 2012 which extended the time for resuming beneficial use to August 31, 2017. Water right 61-7724 was licensed on November 6, 2014 so no Extension of Time to avoid forfeiture is required. There should be no forfeiture concerns for any of the three water rights except for the August 31, 2017 proof of beneficial use time.

D. Potential Water Supply Bank

Since no use of the water from the common hot water well has been identified since 2009, all or parts of these rights could have been offered for lease to the Idaho Water Supply Bank. That was apparently not done; however, the approved extension of time to avoid forfeiture protects these two rights. If immediate resumption of use is not contemplated, the Water Bank could be used to provide some income and forestall forfeiture concerns if necessary.

E. Constraints on Discharge and Volume

All three water rights have combined limits on discharge from the well. Essentially the combined discharge limit for the three water rights is 0.67 cfs even though the sum of the individual discharges is greater than 0.67 cfs.

Water diverted under any of these rights is considered waste water after being used for its primary use which is for the heat value in potato processing. After use for heat value (potato processing), water may be utilized for land application.

There are no combined limits on total volume for the three water rights, so the total allowed annual diversion volume is the sum of the individual volumes or $58 + 8 + 251 = 317$ AFA.

F. Cogeneration

Water Right 61-7724 is licensed for industrial use which included potato processing and cogeneration. Cogeneration is allowed only after the diverted water is used first for potato processing. The season of use for this right is from 1/01 to 12/31. This license allows a combined diversion with water rights 61-2248B and 61-7189 of 0.67 cfs. The allowed annual volume for water right 61-7724 for industrial use in food processing and cogeneration is 251 AF. The season of use for this right is for 365 days; however, the hot water can only be used for cogeneration after it has been used for its heat value. Since the period of use for water rights 61-7189 and 61-2248B is for 8/15 to 7/01 and their primary use is for potato processing (heat value), then the allowed period of use for 61-7724 for cogeneration is limited also to 8/16 to 7/01 or 320 days. If the allowed discharge of 0.67 cfs is utilized continuously for 320 days, the total volume would be 424.5 AF. However, the volume limit on 61-7724 is 251 AFA. It would seem, then, that the limits on use of any water for cogeneration are 0.67 cfs for a total volume of 251 AFA or 189 days of operation at 0.67 cfs.

G. Trust Water

All of the water rights are subject to a 20 year review by IDWR to determine availability of water and to re-evaluate the public interest. This condition is applicable to all permits or licenses deemed to be trust water according to the Swan Falls agreement between the State of Idaho and Idaho Power.

H. Separate Agreements

Water right 61-7724 is subject to agreements which were entered into during the adjudication process and require the owner to adhere to certain operating or potential mitigation requirements. Water rights 61-7189 and 61-2248B may also be subject to separate agreements. These requirements are not administered by IDWR and any breach of these agreements is a civil matter.

RESUMPTION OF BENEFICIAL USE

The Idaho Department of Water Resources will consider this form as a statement that the water right holder(s) has/have resumed the use of water for the water right identified below. This form **must** be returned to the department or the water right will revert to the state of Idaho.

Water Right Number(s) _____

Name of Water Right Holder(s) _____

Mailing Address _____

_____ Telephone Number _____

Source of Water (Groundwater/Surface) _____

Extent of Use: Domestic _____ (number of households)

Stockwater _____ (number and type of stock)

Irrigation _____ (number of acres irrigated)

Other/Remarks _____

Total rate and/or volume of use _____ cfs _____ acre feet

Show the date water use was resumed under this water right _____

Person to contact to accompany the Department representative if a field examination is conducted:

Name _____ Telephone No. _____

Address _____

The above information is my true statement of the extent to which diversion and use of the above-described water right has been resumed.
