Subject: Conditions for West Ada

Modified.943:

The primary irrigation water for the place of use authorized under this right is surface water delivered by <<Farmers' Co-Operative Ditch Company>>. The right holder shall make full beneficial use of said primary surface water rights available to the right holder for irrigation of lands within the authorized place of use for this right. The right holder may divert water under this right to irrigate land with appurtenant primary surface water rights when the primary surface water supply is not reasonably sufficient to irrigate the place of use for this water right or is not available due to drought, curtailment by priority, or the seasonal startup and shutoff or maintenance schedule for canal company deliveries. The right holder shall not divert water for irrigation purposes under this right if use of the primary surface water rights is intentionally discontinued or reduced (for example abandoned, forfeited, sold, disallowed by court decree, or leased to the Water Supply Bank), or is not deliverable due to non-payment of annual assessments, without an approved transfer pursuant to Idaho Code §42-222 or other Department approval.

24-Hr Turf Grass condition does not have a standard condition or number, so here is our standard language:

The diversion rate for this right shall not exceed <# total irrigation rate> cfs. Provided, further, this right when combined with all other rights shall provide no more than <0.02 cfs> per acre when averaged over a twenty-four hour period based upon the amount of water applied over such twenty-four hour period. However, should the lands authorized to be irrigated under this right ever cease to be a school, park, cemetery or golf course recognized by the Department as allowing more than <one inch> per acre, then this right when combined with all other rights shall provide no more than <0.02 cfs> per acre at the field headgate for irrigation of the place of use.
