Question # 7: Proposed Diverting Works:

a. Describe type and size of devices used to divert water from the source.

Answer: 1.5 HP 115/230 Volts electric water pump with 2" flexible vinyl suction hose with foot valve. Discharge side will be 5/8 to 3/4 inch common flexible vinyl garden hose with manually moved "Rain Bird" style sprinkler. Bank height where pump will be located is approx. 5 - 6 feet above the summer river/water elevation.

Question # 12: Describe your proposal in narrative form, and provide additional explanation for any of the items above. Attach additional pages if necessary.

Answer: Our property is used recreationally on a limited seasonal basis due to being located in a river bottom flood plain. The property is used for camping with our Recreational Vehicle (Trailer). All personal property ie; Rv, tools, lawn mower and proposed water pump must be removed after every season due to chronic annual flooding.

The water pump will be positioned on the river bank and no permanent piping will be constructed. The use of flexible vinyl hose for both water intake and discharge diversion is planned. The pump and hoses will be removed at the end of each season. The water diversion is for irrigation of grass for the purpose of dust abatement and fire prevention.

Additional Note: Last year, due to late season flooding we could not use our property until June 20, 2018. Also, the water level recorded over the property in 2017 was 10'4" deep. The structure observed (metal green roof) in the GeoEye Earthstar Map is a roof only shelter with a concrete slab. The shelter is not whatsoever enclosed.
