CONCLUSIONS

- 1) The proposed change will neither result in an expansion of the existing rights nor cause injury to other rights.
- 2) The change is expected to increase the efficiency of water delivered to Mr. Godfrey's pumps after the 1898 priority rights are cut.
- 3) There should be no charge against Mr. Godfrey's water rights for potential losses in the river between the heading for the McCormick-Rowe Ditch and his pumps.
- 4) Water should not be delivered to both points of diversion simultaneously.

RECOMMENDATION/CONDITIONS

The transfer should be granted with the following conditions:

- 1) Water rights 22-00424 and 22-00490 can only be diverted through the McCormick-Rowe Ditch (T6N R40E SEC 1 SWNW).
- 2) Water rights 22-00425B and 22-00491A can be diverted either through the McCormick-Rowe Ditch when delivered with rights 22-00424 and 22-00490 or in T6N R40E SEC 2 SWSW after the April 1, 1898, water rights have been cut.
- 3) Delivery of these rights is subject to regulation by the Watermaster for Water District 01.
- 4) A lockable headgate and measuring device of a type approved by this Department shall be maintained as a part of the diverting works at both points of diversion.
- 5) Approval of this transfer does not preclude the opportunity for review of the validity of the water rights in the ongoing Snake River Basin Adjudication.

ADJUDICATION FOLLOWUP

A determination will need to be made regarding the need for 15.638 cfs to irrigate 240 acres. Eric Verner did give Mr. Godfrey an excessive flow work sheet which he will need to complete in support of his April 1, 1898 water rights.

RE: APPLICATION FOR TRANSFER 22-00424/00425B/00491A/00490
GLEN R. GODFREY

PURPOSE

Mr. Godfrey wants to construct an intake from the Teton River to his existing pumps. Then by adding the pumps as a point a point of diversion to his earlier water rights he could pump almost directly from the river. This would eliminate the transmission loss sustained in the McCormick-Rowe Ditch.

FINDINGS

- 1) On August 10, 1992, Tony Olenichak and Eric Verner, met with the applicant to perform an on site investigation. Using a pygmy meter Tony and Eric measured the flow of water at the head of the McCormick-Rowe Ditch and at the end of it, where water can either be diverted to Mr. Godfrey's two pumps or discharged into the Teton River. Their measurements reflect a transmission loss of 61% between these two points.
- 2) Mr. Godfrey indicated the existing pump site is the additional point of diversion. With some excavation work he hopes the flow of water at the end of the McCormick-Rowe Ditch can be reversed allowing water from the Teton River water to reach the pumps. The added point of diversion is approximately 1.5 miles downstream from the heading for the McCormick-Rowe Ditch.
- 3) Mr. Godfrey stated he wants to continue diverting water through the McCormick-Rowe Ditch when 1898 priority water rights are being delivered on the Teton River. When these rights are being delivered he has ample water to flood irrigate the 240 acres listed as the POU.
- 4) After the 1898 priority water rights are cut, Mr. Godfrey proposes to cease using the McCormick-Rowe Ditch and then start pumping his remaining rights at the added point of diversion.
- 5) On the day of the inspection Mr. Godfrey was operating one of two pumps. A totalizing meter installed in the mainline indicated he was pumping between 800 to 1000 gpm.
- 6) Mr. Godfrey does not want the new point of diversion added to his 1898 water rights.
- 7) Mr. Godfrey is the only user of the McCormick-Rowe Ditch.
