FINDINGS OF THE SPECIAL MASTER

IN THE MATTER OF THE DETERMINATION OF THE RIGHTS TO DIVERT THE WATERS OF

HAYDEN LAKE AND ITS TRIBUTARIES IN KOOTENAI COUNTY, IDAHO

On October 24, 1966, this action was commenced in the First Judicial District Court (formerly the Eighth Judicial District), Kootenai County, Idaho, by the filing of individual complaints by Avondale Irrigation District, Dalton Gardens Irrigation District, and Hayden Lake Irrigation District, all quasi municipal corporations of the State of Idaho against North Idaho Properties, Inc., an Idaho Corporation, John Doe I, John Doe II, John Doe III, the unknown owners and the unknown claimants and/or unknown devisees of any deceased person having, claiming or asserting any interest in and to those waters of Lake Hayden Lake, located within Water District 93, Kootenai County, Idaho.

The plaintiffs sought a decree quieting their title to rights to the use of the waters of Hayden Lake and enjoining and restraining any and all other persons, companies, corporations, and partnerships from in any way interfering with the prior rights. The petitions further requested the court to appoint a water master to carry out the terms of the court decree and to direct the Department of Reclamation to ascertain by survey the users of said water source and the date of their water right appropriation.

The three matters were consolidated for trial and the Department of Reclamation was ordered to make an examination of the waters of Hayden Lake and the diversion therefrom and of the lands being irrigated therefrom and of the appropriation and/or use of water taken therefrom in the manner provided by Section 42-225, Idaho Code, and the Department was further directed to prepare maps showing the water source and the lands thereunder, the capacity and the amount of land irrigated therefrom and/or water used or taken therefrom and to file a copy of such report, determinations, and maps with the Clerk of the Court, serving copies on all parties appearing in said cause and controversy.

On April 10, 1968, R. Keith Higginson, State Reclamation Engineer, submitted an affidavit informing the court that the Department had completed the preliminary mapping and other investigational work for the purpose of full and complete compliance with said order and that the preliminary investigation of the users of water from Hayden Lake had shown the possibility that there were in excess of 5,000 potential users of said water and that the determination of the nature, extent, and priority date of their use would not be possible unless the Department be allowed to hold and conduct hearings, to place witnesses under oath, and do all things necessary for the purpose of procuring the necessary information for the report.

On April 24, 1968, pursuant to petition from the plaintiffs, the court issued an order appointing Mr. R. Keith Higginson, State Reclamation Engineer, as Special Master in the case with the power to do all things and join all parties necessary in order to gather the information required to complete a report and to submit recommendations to the court.

Pursuant to the authority granted by the court, the Special Master caused a report entitled "Proposed Findings of the Special Master" to be prepared by the Department of Reclamation which was distributed to all parties. This report and its proposed recommendations

of water rights were made the subject of hearings before the Special Master held in Coeur d'Alene, Idaho, on July 29, July 30, July 31, and August 1, 1969; January 27, January 28, and September 3, 1970. Thirty-four witnesses appeared and offered testimony during these hearings, and 35 exhibits were introduced by the various parties.

Based upon the evidence presented, the Special Master reports to the court the following Findings of Fact, Conclusions of Law, and Recommended Decree:

FINDINGS OF FACT

(1) Hayden Lake is located 30 miles east of Spokane, Washington, and 5 miles north of Coeur d'Alene, Idaho, in the narrow "panhandle" portion of Idaho. The Hayden Lake drainage and associated irrigated area include some 60 square miles situated in Kootenai County, on the southeastern edge of the Rathdrum Prairie. The prairie comprises the western boundary of the lake while the south, east, and north sides are bounded by mountains. Most of the streams feeding the lake come from these mountains. Hayden, Nilsen, and Lancaster creeks are the largest streams, but many small, often intermittent creeks also contribute to the lake. The mountains that surround the lake on three sides have an average maximum elevation of 5,000 feet. Precipitation is primarily in the form of rainfall. Snowfall, which may be heavy at times, rarely remains, resulting in little or no snow coverage and causing the runoff to be heaviest in late winter and early spring. The mountains are heavily timbered. This controls runoff and increases the time available for recharge of ground-water storage.

(2) Settlement of the Hayden Lake area began in the 1860's after the Mullen Road was rerouted around the northern end of Coeur d'Alene Lake. Irrigation did not become a factor in the settlement of the area until after 1900. Then, within a decade, four irrigation districts were organized to supply water to a portion of Rathdrum Prairie. These irrigation districts started pumping from the lake for irrigation in the following years: Avondale Irrigation District, 1907; Dalton Gardens Irrigation District, 1906; Hayden Lake Irrigation District, 1907; and Post Falls Irrigation District, 1909. Another major user, the Coeur d'Alene Country Club, began diverting water from the lake in 1907 for irrigation and domestic purposes. Since the late 1950's, there has been an extensive development of summer homes around the lake. Most of these homes derive their domestic water supply from the lake.

(3) Hayden Lake lies in a glacially-dammed stream valley on the eastern side of the Purcell Trench, a structural and erosional trough extending from Canada to the Spokane Plateau. The lake is bounded on three sides by pre-Cambrian and Cretaceous rocks. The pre-Cambrian rocks are well-stratified limestone, shale, and sandstone of the Belt Series and are exposed along the southeastern edge of the lake. Granitic rocks of Cretaceous age form over half of the shoreline and a portion of the floor of the lake. These rocks are related in age and composition to the massive Idaho Batholith to the south. Approximately half of the northern shoreline of Hayden Lake is bounded by Columbia River basalt of Middle Miocene age. Although the basalt is vesicular near the top and bottom of individual flows, the permeability appears to be low. The extent of the basalt beneath Hayden Lake is unknown, but the rock probably forms at least a portion of the lake bottom. The lake is dammed at the western end by a heterogeneous mass of glacial debris. This deposit was emplaced during pre-Wisconsin glaciation of the Purcell Trench and is probably a remnant of a lateral moraine which was partially buried by glacial outwash during the recession of the Wisconsin age ice sheet from the Purcell Trench. Glacial outwash comprises the large, relatively flat area to the west of the lake known as the Rathdrum Prairie.

Recent deposits in the Hayden Lake area consist of coarse alluvium deposited by local streams.

Water levels in wells in the Rathdrum Prairie indicate an extremely steep ground-water gradient between the lake and the general ground-water system. Wells within one mile of the west end of the lake have water levels over 250 feet below land surface. Leakage from the lake is believed to be primarily through the morainal dam in Sections 18 and 19, Township 51 North, Range 3 West, Boise Meridian.

(4) The Hayden Lake watershed comprises about 39,000 acres of fairly steep mountainous area. The majority of the runoff occurs during the months of February through May. The maximum observed flow in Hayden Creek, the major tributary, is 790 cubic feet per second (c.f.s.) of water occurring on December 23, 1964. The maximum gage height recorded for the lake is 2,242.67 feet above mean sea level, on April 22, 1956. The minimum lake elevation recorded is 2,219.59 feet above mean sea level, on December 16, 1931. (Figure 1 shows the maximum and minimum lake levels for the years 1920-1968.)

The natural surface outlet of the lake has been altered by construction of a control dam and outlet spillway. Large amounts of water are lost to the Rathdrum Prairie through seepage from the lake bottom.

The mean annual yield of the Hayden Lake Basin is estimated at approximately 55,700 acre feet per year. Seepage from the lake is estimated at about 22,000 acre feet per year.

The mean change in storage volume from the minimum lake elevation in the fall until the maximum lake elevation in the spring is about 26,850 acre feet, based upon 47 years of United States Geological Survey water supply records and Department of Reclamation capacity curves for the lake.

(5) The quantity of water required for irrigation of lands is found to be 3.5 acre feet of water per irrigated acre. The normal irrigation season is determined to be 154 days in length within the dates of April 1 to October 31, inclusive.

(6) The use of water for domestic purposes varies widely from use in permanent year-round residences and commercial and business establishments to occasional and weekend summer cottages. Year-round domestic usage is found to be 0.57 acre foot of water per household per year. Summer cottage and intermittent use are found to be a portion of the annual rate based upon the length of time each claimant occupies his cottage each year.

(7) The Post Falls Irrigation District filed an application with the State Engineer on January 22, 1909 for a permit to appropriate water from Hayden Lake and Permit No. 4370 was issued to the district. The Department of Reclamation subsequently issued Water License No. 4370 to the district to the effect that a right had been established to the diversion and use of 55.0 c.f.s. of water from Hayden Lake for the irrigation of 2,753 acres of land with a priority of right of January 22, 1909. In about 1945, the Post Falls Irrigation District ceased drawing water from Hayden Lake.

By deed dated March 17, 1954, the Post Falls Irrigation District purportedly transferred its Hayden Lake water right, License No. 4370, to the Avondale, Dalton Gardens and Hayden Lake irrigation districts. Subsequently, on September 24, 1962, separate applications to transfer

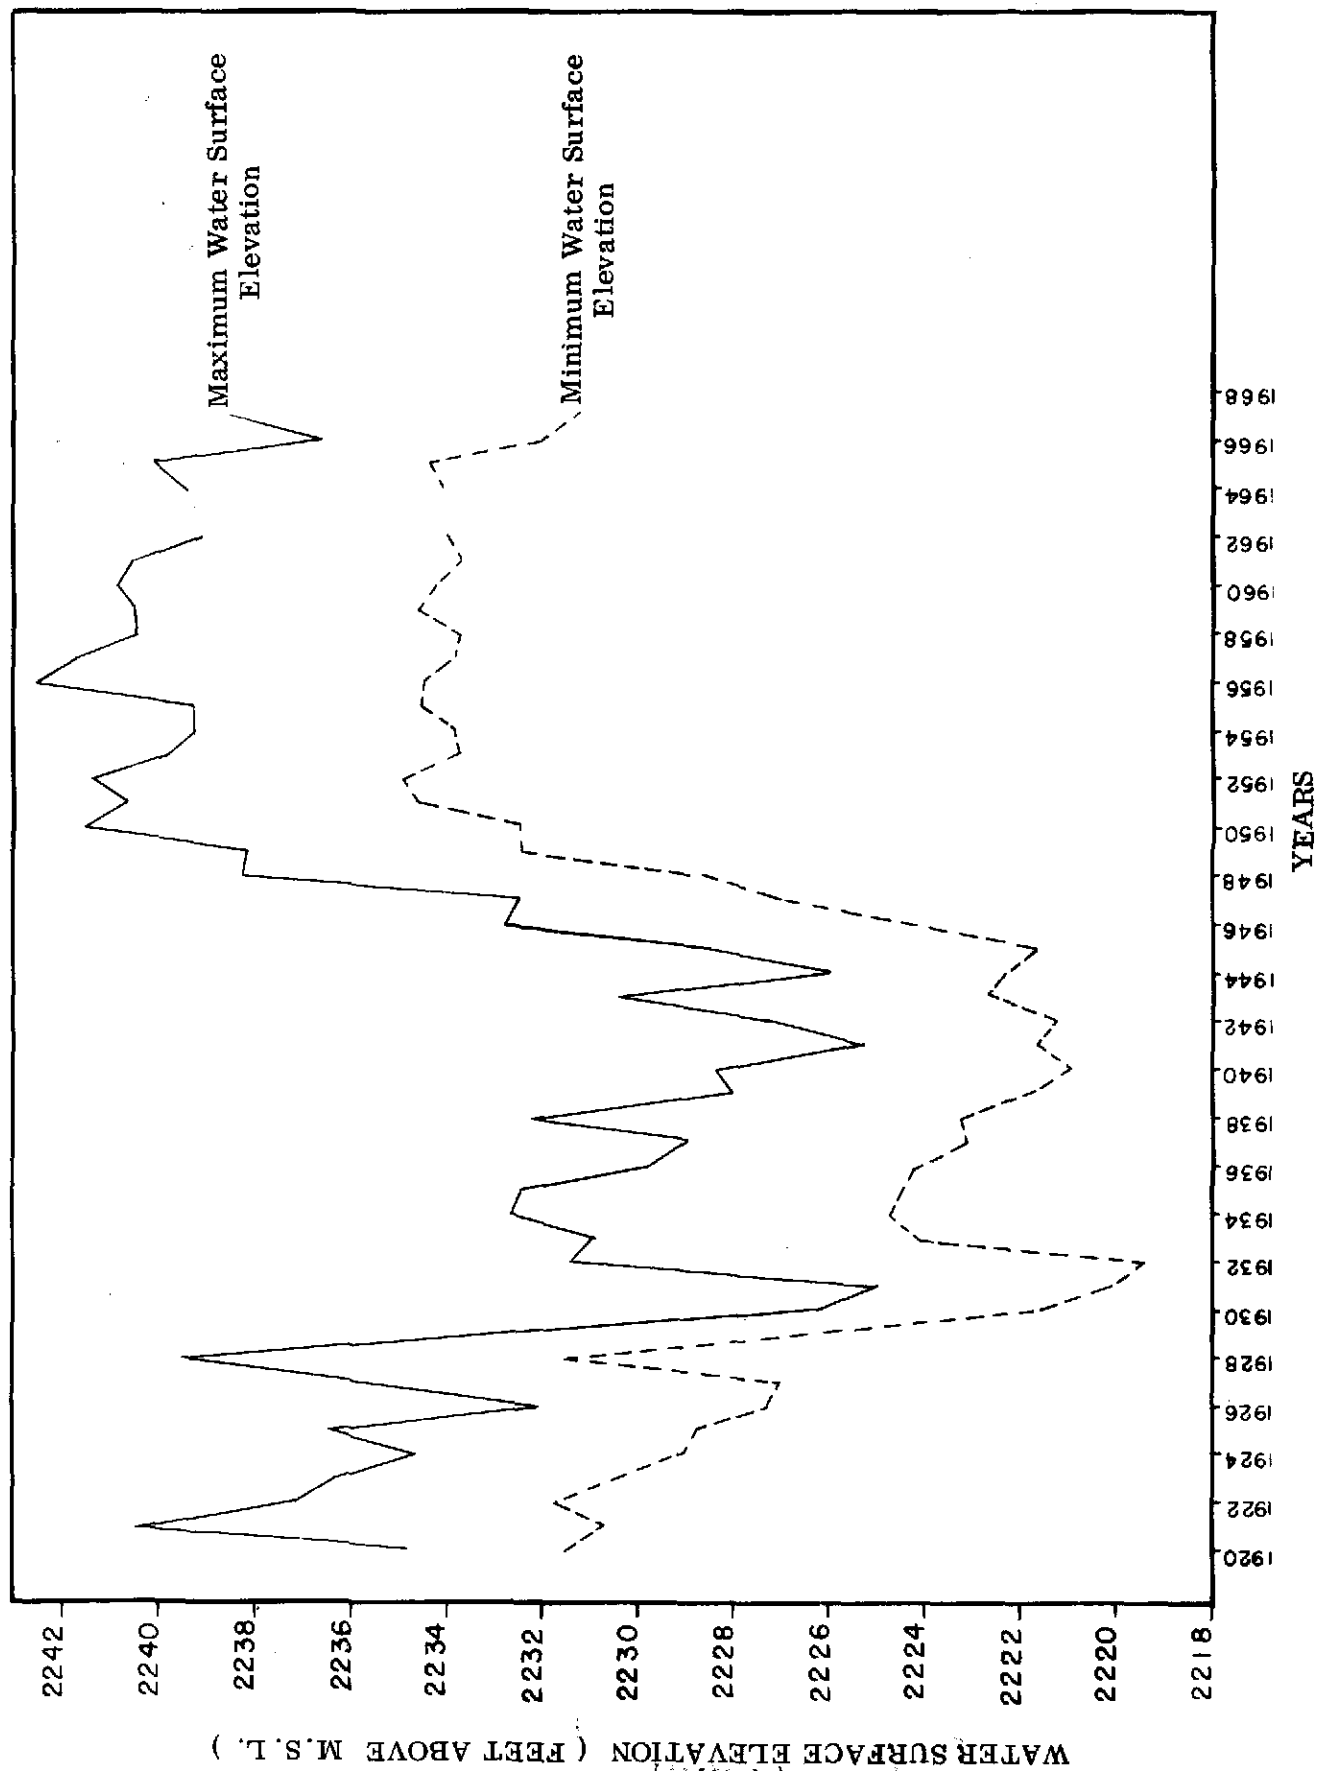

Figure I - Maximum and Minimum Water Surface Elevations for Years 1920 - 1968

the place of use of portions of the water right were filed by each of the last three named districts. Each of these applications for transfer was approved by the State Reclamation Engineer.

(8) There is testimony in the record to the effect that the quantity of water withdrawn from the lake by the plaintiffs has varied somewhat over the years due to changes in pumps and motors and changes in water requirements caused by conversion of acreage from orchards to other crops. However, the dates of any increased (or decreased) use of pumping plant capacities were not completely established by testimony or exhibits. The present pumping plants were constructed under contract by the U.S. Bureau of Reclamation and apparently first placed in operation in 1962. The record also indicates that residents within each of the irrigation districts obtained their domestic water through the same systems as the irrigation water.

The Special Master has taken judicial notice of the files and records of the Department of Water Administration and the following official reports of the U. S. Bureau of Reclamation:

- (a) Avondale Project, Idaho, Definite Plan Report, Volume 1, General Plan, June 1954.
- (b) Dalton Gardens Project, Idaho, Definite Plan Report, Volume 1, General Plan, March 1954.
- (c) Hayden Lake Unit, Rathdrum Prairie Project, Idaho, Definite Plan Report, Volume 1, General Plan, September 1956.

Based upon the evidence presented at the hearings and the records of which judicial notice was taken, it appears that the history of the diversion and use of water from Hayden Lake through each of the plaintiff's diversion systems has been approximately as follows:

Avondale Irrigation District

ERRATA: Wherever the words "per acre per day" appear on pages 5, 6 & 7, this should read "per acre per year."

- (a) June 13, 1907 – Application filed for permit to appropriate 7.0 c.f.s. of water for irrigation of 1,120.0 acres of land. Subsequent examination made by the State Engineer following submission of Proofs of Beneficial Use of Water indicated that diversion and use of water was at the rate of 4.12 c.f.s. for irrigation of 571 acres of land. These 571 acres of land could require 3.5 acre feet of water per acre per day for a 154-day irrigation season for a total of 2,000 acre feet. However, the pump capacity could supply only 1,269 acre feet of water if operated 24 hours each day throughout the same 154-day season. The pump could also supply the requirement of 0.5 acre foot of domestic water for the 286 households per year.
- (b) 1922 – New pump installed with capacity of 3,150 gallons per minute (7.02 c.f.s.) which was used until other new facilities were put into operation in 1962. Use of water through this pump in 1954 was found to be for irrigation of about 775 acres of land. These 775 acres of land could require 3.5 acre feet of water per acre per day for a 154-day irrigation season for a total of 2,712 acre feet. However, the pump capacity could supply only 2,162.0 acre feet of water if operated 24 hours per day throughout a 154-day season.
- (c) 1962 – New pumps installed with capacity of 6,000 gallons per minute (13.37 c.f.s.). Use of this water at the time of the survey by the Department of Reclamation in

1967 was found to be for domestic purposes of 286 households and irrigation of 694 acres of land. Although this pumping plan is capable of producing 3,180 acre feet of water if operated 24 hours per day for a 154-day season, the 694 acres of land and the 286 households require a yearly quantity of only 2,592 acre feet.

Dalton Gardens Irrigation District

(a) December 20, 1906 – Application filed for a permit to appropriate 25.0 c.f.s. of water for irrigation of 2,080 acres of land. Subsequent examination made by the State Engineer following submission of Proof of Beneficial Use of Water indicated that diversion and use of water was at the rate of 9.693 c.f.s. for irrigation of 807.75 acres of land. These 807.75 acres of land could require 3.5 acre feet of water per acre per day for a 154-day irrigation season for a total of 2,827 acre feet. However, the pump capacity could supply only 2,431 acre feet of water if operated 24 hours per day throughout the same 154-day season. This is after deducting the pumping capacity (1.8 c.f.s.) for the now separate domestic system.

(b) September 22, 1913 – Additional Proof of Beneficial Use of Water submitted and license issued confirming use of additional 0.012 c.f.s. of water for irrigation of 10 acres of land with priority of September 22, 1913. This additional pumping capacity could produce 4.0 acre feet of water through the irrigation season.

(c) 1936 – New pump installed with capacity of 5,500 gallons per minute (12.25 c.f.s.). Use of water through this pump in 1954 was found to be for irrigation of about 872 acres of land. These 872 acres of land could require 3.5 acre feet of water per acre per day for a 154-day irrigation season for a total of 3,052 acre feet. This is less than could be produced by pumping 24 hours each day throughout the irrigation season.

(d) 1962 – New pumps installed with combined capacity of 6,000 gallons per minute (13.31 c.f.s.). Use of this water at the time of the survey by the Department of Reclamation in 1967 was found to be for irrigation of 793 acres of land. These 793 acres of land could require 3.5 acre feet of water per acre per day for a 154-day irrigation season for a total of 2,775.5 acre feet. This is less than could be produced by pumping 24 hours each day throughout the irrigation season.

Hayden Lake Irrigation District

(a) June 27, 1906 – Application filed for a permit to appropriate 15.0 c.f.s. of water for irrigation of 2,000 acres of land. Subsequent examination made by the State Engineer following submission of Proof of Beneficial Use of Water indicated that diversion and use of water was at the rate of 15.0 c.f.s. for irrigation of 2,003 acres of land. These 2,003 acres of land could require 3.5 acre feet of water per acre per day for a 154-day irrigation season for a total of 7,010.5 acre feet. However, the pump capacity could supply only 4,620 acre feet of water if operated 24 hours each day throughout the same 154-day season. The pump could also supply the requirement of 0.57 acre foot of domestic water for the 237 households per year.

(b) 1922 – New pumps installed with capacity of 14.0 c.f.s. Use of water through these pumps in 1956 was found to be for irrigation of about 1,037 acres of land. These 1,037

JUL 31 1996

acres could require 3.5 acre feet of water per acre per day for a 154-day irrigation season for a total of 3,630 acre feet. This is less than could be produced by pumping 24 hours each day throughout the irrigation season.

(c) 1962 — New pumps installed with combined capacity of 9,000 gallons per minute (20 c.f.s.). Use of this water at the time of the survey by the Department of Reclamation in 1967 was found to be for domestic purposes of 237 households and irrigation of 1,405 acres of land. These 1,405 acres of land could require 3.5 acre feet of water per acre per day for a 154-day irrigation season for a total of 4,918 acre feet. This is less than could be produced by pumping 24 hours each day throughout the irrigation season.

(9) In about 1945 those persons receiving domestic water through facilities of the Dalton Gardens Irrigation District formed the Dalton Water Association, Inc. for the purpose of constructing and operating a separate domestic water system. The Department of Reclamation's report recommended that use of water through this system be found to be for 1.8 c.f.s. for domestic use of 450 households with a priority of December 20, 1906, pursuant to Water License No. 2518. Neither the Dalton Water Association, Inc. nor the Dalton Gardens Irrigation District objected to the proposed finding.

(10) The maximum allowable level of Hayden Lake was set at 2,239.0 feet above mean sea level by the District Court in the case of Hayden Lake Protective Association, Inc. vs. Dalton Gardens Irrigation District, et al, in March of 1962. The court directed that an adequate spillway be installed *...so that such spillway as constructed shall be designed and operated to draw excess water levels over and above the level fixed by this decree, reasonably calculated to maintain normal and average high water at a level of 2,239.0 feet.*

No minimum lake level for protection of the pumping rights of the irrigation districts or the lake front properties was set by the court in the above case and no minimum lake level was recommended by the Department in its report. Testimony of the Idaho Fish and Game Department indicated there is an adverse effect upon recreational boating and the fishery resources of Hayden Lake when the level drops below 2,234.0 feet.

Plaintiff's witnesses and evidence indicate that there is a physical limitation on the three pumping plants they currently operate. This is the limitation of the centrifugal pumps' ability to lift water from the lake as the lake level recedes during the irrigation season. The pumps are apparently set at 2,240.0 or 2,240.25 feet elevation. Plaintiff's witnesses testified that the pumps of the Avondale Irrigation District were designed to operate with a lake level of 2,233.5 feet elevation. Because of the similarity of construction it is reasonable to assume that the pumps of the other two districts were designed to operate under the same limitations. When the lake level drops below 2,233.5 feet there may be danger to the intake pipes and pumps. Pumping with a water surface at this elevation would mean that the pumps would be operating against a head of 6.5 or 6.75 feet on the intake side. The design minimum water level for the three irrigation pumping plants is 2,230.0 feet, although the districts have, at times, operated their pumps (those in use prior to the 1962 replacements) when lake levels were below that elevation. The historical record of water levels maintained by the U. S. Geological Survey indicates a maximum water surface elevation of 2,242.67 feet on April 22, 1956 and a minimum elevation of 2,219.59 feet on December 16, 1931. (It should be noted that the zero on the currently used U. S. Geological Survey gage at Hayden Lake is set at elevation 2,200.21 feet above mean sea level. Therefore, 0.21 foot must be added to all U. S. Geological Survey gage readings since March 26, 1931 to

RECEIVED JUL 31 1996

JUL 31 1996

obtain mean sea level elevations.)

(11) The Avondale Lake drainage, with total area of approximately 2.2 square miles, is a natural tributary of Hayden Lake. The runoff from this drainage is controlled by an earth dam constructed in about 1893 and rebuilt of concrete in about 1937. The lake is used for recreational boating, swimming, fishing, and domestic purposes. Also, in recent years (1967) water has been pumped from the lake for irrigation (File No. 95-0012). The storage capacity of the lake as originally controlled by the earth dam is unknown as also is the present storage capacity. The present spillway elevation is 2,288.0 feet above mean sea level and the elevation prior to 1937 was apparently 2.0 feet lower.

(12) The United States of America, Forest Service administers use of certain lands within the Hayden Lake drainage. Part of these lands were reserved by Presidential Proclamation dated November 6, 1906, while some lands were subsequently acquired by other means. The United States claims rights to the use of water in connection with the "reserved" lands with a priority of water right date of November 6, 1906. Its claims include use of water in connection with two allotment areas on which cattle are permitted to graze and on which use of water is by the cattle drinking directly from the streams.

The United States also claims a right to the use of water for a proposed campground development at "Hells Canyon" (File No. 95-0495) with a water right priority of November 6, 1906. Such claim is made under the principle of water law commonly referred to as the "Reservation Doctrine."

In addition to the above specified rights to use of the water of Hayden Lake and its tributaries, the United States claims additional, unspecified rights to the use of water under the Reservation Doctrine for the purpose for which the land was initially withdrawn. No quantification or identification of such additional claimed rights were asserted by the United States and no factual finding can be made concerning them, if, in fact, such additional rights do exist.

CONCLUSIONS OF LAW

(1) The water rights originally held by the Post Falls Irrigation District under Water License No. 4370 were abandoned or lost by statutory forfeiture through a failure for a period of five consecutive years to apply the water to a beneficial use. Even though the Avondale, Dalton Gardens and Hayden Lake irrigation districts subsequently filed applications to transfer parts of the Post Falls rights and such applications were considered and approved by the State Engineer, no rights could be created by his approval that did not previously exist. Any expansion of the withdrawal of water from Hayden Lake by the three irrigation districts over the years by installation of new pumps and motors and in 1962 following reconstruction of pumping facilities by the Federal Government resulted in an appropriation of water by the "constitutional" method of diversion and application to beneficial use.

(2) I find nothing to support the plaintiffs' contention that their rights to the waters of Hayden Lake entitle them to whatever quantity of water is required to serve the area within the boundaries of the districts regardless of the area actually being irrigated or the number of domestic users at any given time or to what extent they may choose to annex additional lands to said districts. On the contrary, it is concluded that every water right is limited by the extent to

which water has actually been diverted and applied to beneficial use. Water Licenses No. 2882 (Avondale Irrigation District), 2518 (Dalton Gardens Irrigation District), and 2129 (Hayden Lake Irrigation District) described the extent to which rights were established by the plaintiffs following construction of their original pumping plants.

Based upon the reports of which notice was taken and evidence in the record, the plaintiffs are entitled to a decree adjudicating their respective rights to the waters of Hayden Lake as described in the schedule of water rights in this report. Such schedule of water rights should recognize the domestic water used by the districts even though such use was not included in the original water right licenses.

(3) The Defendant, Avondale on Hayden, Inc., is entitled to a decree recognizing its rights to storage of waters of the Avondale Lake tributary of Hayden Lake with priority of 1893 for water to elevation 2,286.0 feet mean sea level and with priority of 1937 for water to elevation 2,288.0 feet mean sea level for recreation, boating, swimming, fishing and domestic purposes. Such rights are in addition to the defendant's right to pump water from Avondale Lake under File No. 95-0012 for irrigation purposes.

(4) The construction of the outlet control dike at Hayden Lake provides storage of water which would otherwise be lost for use for irrigation, domestic, and recreation purposes. No party claimed a right to this storage and it is concluded that no water right exists since the various uses of this storage are in conflict with each other. However, the various parties have a right and obligation to maintain the dike and outlet spillway to control the maximum lake surface as provided in the court's prior decree.

(5) The United States holds rights to the use of water on reserved forest lands within the Hayden Lake drainage with a priority of November 6, 1906 to the extent such water has been diverted and applied to beneficial use prior to the date of this action and to the extent that future potential uses can be reasonably identified. The rights of the United States are subject to adjudication in this proceeding under the provisions of 43 U.S.C. Section 666. The United States holds no rights to the present or future use of water of Hayden Lake and its tributaries, either expressly or impliedly, except as set forth in these Findings, Conclusions, and Recommendations.

The claims of the United States of rights to water in connection with grazing allotments where no diversion and use facilities exist are in the nature of "riparian" rights which are not recognizable in Idaho as against rights acquired by appropriation through diversion and application to beneficial use.

RECOMMENDED DECREE

It is recommended that the court adjudicate the rights of the various parties claiming the waters of Hayden Lake and its tributaries substantially as follows:

ADAMS, Lexie R., Box 236, Dishman Station, Spokane, Washington

---------	--------------	---------	-------------	---------	----------------

The following claims are included under the recommended water right for the Hayden Haven Water Company water system (File No. 95-0168) and are recommended to be disallowed.

95-0292	Olson, Orville C.	95-0345	Showacre, Robert M.
---------	-------------------	---------	---------------------

The Special Master makes the following general recommendations to the court:

- (1) That the court make no finding as to those parties claiming rights to use water from ground-water sources, except to disallow those claims as they apply to Hayden Lake and its tributaries, without prejudice.
- (2) That the court confirm elevation 2,239.0 feet above mean sea level as the maximum water level for operation of Hayden Lake based upon its prior decree in the case of Hayden Lake Protective Association, Inc., vs. Dalton Gardens Irrigation District, et al, dated September 7, 1961.
- (3) That no minimum lake elevation be set but that the court require the Department of Water Administration to establish a water district encompassing Hayden Lake and its tributaries as provided in Chapter 6, Title 42, Idaho Code, for the purpose of proper distribution of the lake's waters in accordance with its decree. The rights of the plaintiffs are entitled to protection against a lowering of the lake elevation below 2,230.0 feet above mean sea level. The Department of Water Administration should be directed to devise a system of projecting the maximum water surface elevation on a yearly basis based upon information concerning precipitation and streamflow and the low water elevation for the previous year.
- (4) The Department and its Water Master appointed as provided in Chapter 6, Title 42, Idaho Code, should be authorized to deny water to the holders of water rights (including plaintiffs) in the inverse order of their respective priorities if withdrawal of such water is reasonably expected to lower the lake surface elevation below 2,230.0 feet above mean sea level at any time during the irrigation season.
- (5) The court should retain jurisdiction of this matter pending receipt of further information from the Department concerning its experience with the system for operation of the lake, at which time consideration should be given to incorporating such system into the court's decree.

DATED this 15th day of April, 1971.

R. KEITH HIGGINSON
Special Master
