Re: Water rights 29-13656 and 29-13654

Owner of record: Deborah K Brown

Address: 4638 W Portneuf Road, Inkom, ID 83245

Application attached requesting a change in diversion point due to recent sale of property. Existing diversion is located on property that was sold.

This request is to allow a diversion for Brown to the West of the current diversion and would be on property owned by Brown. The current diversion is noted as "Brown" diversion by the water master. Another diversion noted as "Reardon" who is the purchaser of property he acquired from me in November, 2017. Mr. Reardon has expressed a desire to maintain the Brown diversion point as his diversion if allowed as the other diversion now indicated as his, lies across the river. I obviously need to get a diversion on my land and relocate the pump to that new location which is the reason for this request regardless of your decision on the existing diversion going to him or not.

I am aware of the new requirements for a measuring device and attended the meeting to discuss requirements and obtain the information for obtaining this. The system I will be using is a basic suction hose from the river to the pump with an existing underground pipe system and 3" handlines. Pump will be set on concrete and would be a level area to accommodate the measuring device needed.

The location on the map for the diversion was discussed with the water master and he is aware of this request being made. This location is at the far East side of my property closest to the river and would allow the shortest distance for the electrical line to be run from the shop and keep the pump high enough to eliminate the overflow in high water years. Bank is sloped well to accommodate the suction hose without any disruption to the bank. Water is used for irrigation for pasture/hay.

Your assistance with this is appreciated as I would hope to have approval and be able to move forward in relocating the pump to my land since I have only a temporary right of use and access to the existing diversion point. Please advise if any further information is needed.

Debbie Brown (208) 251-4410
