Department of Water Resources

Water Right License

WATER RIGHT NO. 37-20654

PRIORITY: December 21, 2000

Maximum Diversion Rate: 25.00 CFS
Maximum Diversion Volume: 5,500.0 AF

It is hereby certified that:

THOMAS M O GARA FAMILY TRUST C/O BRIAN BARSOTTI
PO BOX 370 KETCHUM ID 83340

has complied with the terms and conditions of the permit, issued pursuant to Application for Permit dated December 21, 2000, and has submitted Proof of Beneficial Use on January 04, 2010. An examination confirms water is diverted from:

SOURCE:
WASTE WATER

TRIBUTARY:
SINKS

and a water right has been established as follows:

BENEFICIAL USE	PERIOD OF USE	DIVERSION RATE	ANNUAL DIVERSION VOLUME
GROUND WATER RECHARGE	04/15 to 10/31	25.00 CFS	4,150.0 AF
WILDLIFE	04/15 to 10/31	25.00 CFS	3,580.0 AF
WILDLIFE STORAGE	01/01 to 12/31		150.0 AF
DIVERSION TO STORAGE	04/15 to 10/31	25.00 CFS	

LOCATION OF POINT(S) OF DIVERSION:

Water Right License

WATER RIGHT NO. 37-20654

CONDITIONS OF APPROVAL

1. Use of water under this right will be regulated by a watermaster with responsibility for the distribution of water among appropriators within a water district. At the time of this approval, this water right is within State Water District No. 37.

2. Upon notification the right holder shall maintain a measuring device and lockable controlling works of a type approved by the Department in a manner that will provide the watermaster suitable control of the diversion(s).

3. Rights 37-20653 and 37-20654 authorize wildlife storage ponds with a total surface area not to exceed 46.4 acres. This surface area encompasses pre-existing wetland areas in the amount of 26.2 acres with no pre-existing storage capacity.

4. The right holder shall divert 81 AF of water to storage each year in accordance with Rights 37-20636, 37-20638, 37-20640, 37-20642, 37-20644, 37-20646, 37-20648, 37-20650, and 37-20652, as they were approved in Transfer 69756, to mitigate evaporative losses associated with this right. If the specified mitigation rights, or portions thereof, are not used or are not deliverable due to a shortage of water or a priority call, then the amount of water authorized for diversion under this right shall be reduced by the same proportion as the reduction to the mitigation rights.

5. Rights 37-20653 and 37-20654 when combined shall not exceed a maximum diversion rate for ground water recharge of 35.10 cfs and a total annual volume for ground water recharge of 4,150 af; a maximum diversion rate for wildlife of 30.70 cfs and a total annual diversion volume for wildlife of 3,580 af; and a total maximum storage volume for wildlife storage of 150 af.

6. The ground water recharge portion of this right is subject to all prior water rights, including those water rights for power purposes that may otherwise be subordinated by contract entered into by the governor and Idaho Power Company on October 25, 1984, and ratified by the legislature pursuant to Section 42-203B, Idaho Code.

7. Pursuant to Section 42-4201A(3), Idaho Code, the Director may reduce the amount of water diverted for recharge purposes under this right even though there is sufficient water to supply the entire amount authorized for appropriation under this right.

8. To insure that other water rights are not injured by the operations of the recharge project authorized by this right, the director retains jurisdiction to approve, disapprove, or require alterations in the methods employed to achieve ground water recharge.

9. The use of water for ground water recharge purposes under this right does not provide a right to recover ground water for any purpose nor a credit as mitigation for diversion associated with any existing or future water right.

10. The source of water diverted under this right is waste water and is subject to the right of the original appropriator, in good faith and in compliance with state laws governing changes in use and/or expansion of water rights, to cease wasting water, to change the place of use or manner of wasting it, or to recapture it.

State of Idaho
Department of Water Resources

Water Right License

WATER RIGHT NO. 37-20654

11. Water diverted under this right is wastewater from the Baseline Canal.

12. Right holder shall not divert or impound any water source, other than wastewater, under this right.

13. This right is for the use of trust water, and it is subject to review 20 years after its initial date of permit approval to re-evaluate the availability of trust water for the authorized use and to re-evaluate the public interest criteria for reallocating trust water.

14. Use of water pursuant to this right is either nonconsumptive or the right holder is required to provide ongoing mitigation to offset the depletion of water resulting from the use of this right. Regulation of this right to satisfy the minimum stream flow water rights in the Snake River at Murphy Gage shall not be required.

15. This right does not grant any right-of-way or easement across the land of another.

This license is issued pursuant to the provisions of Section 42-219, Idaho Code. The water right confirmed by this license is subject to all prior water rights and shall be used in accordance with Idaho law and applicable rules of the Department of Water Resources.

Signed this 18th day of September, 2018.

RE: License Nos. 37-20653 & 37-20654

Issuance of Licenses

Dear Water Right Holder(s):

The Department of Water Resources ("Department") has issued the enclosed Water Right Licenses confirming that water rights have been established in accordance with your permits. Please be sure to thoroughly review all the conditions of approval listed on your licenses. The conditions may include ongoing requirements, such as maintenance of a measuring device or implementation of mitigation, as well as information about how your water use may be administered, such as regulation by a watermaster in a water district.

The licenses are PRELIMINARY ORDERS issued by the Department pursuant to Rule 730 of the Department's Rules of Procedure (IDAPA 37.01.01.730). They can and will become final orders without further action by the Department unless a party petitions for reconsideration, files exceptions, or requests a hearing as described in the enclosed information sheet.

Also, please note that water right owners are required to report any change of water right ownership and/or mailing address to the Department within 120 days of the change. Failure to report these changes could result in a $100 late filing fee. Water right forms are available from any office of the Department or on the Department's website at idwr.idaho.gov

If you have any questions concerning the enclosed information, please contact me at (208) 287-4951.

Sincerely,

Pamela S.Skaggs, Manager
Water Rights Section

Enclosure(s)

CERTIFICATE OF SERVICE

I hereby certify that on September 20, 2018, I served true and correct copies of Water Right License Nos. 37-20653 & 37-20654 by U.S. Mail, postage prepaid, to the following:

EXPLANATORY INFORMATION TO ACCOMPANY A PRELIMINARY ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 730.02)

The accompanying order or approved document is a "**Preliminary Order**" issued by the department pursuant to section 67-5243, Idaho Code. **It can and will become a final order without further action of the Department of Water Resources ("department") unless a party petitions for reconsideration, files an exception and brief, or requests a hearing as further described below:**

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a preliminary order with the department within fourteen (14) days of the service date of this order. **Note: the petition must be received by the department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See Section 67-5243(3) Idaho Code.

EXCEPTIONS AND BRIEFS

Within fourteen (14) days after: (a) the service date of a preliminary order, (b) the service date of a denial of a petition for reconsideration from this preliminary order, or (c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration from this preliminary order, any party may in writing support or take exceptions to any part of a preliminary order and may file briefs in support of the party's position on any issue in the proceeding with the Director. Otherwise, this preliminary order will become a final order of the agency.

REQUEST FOR HEARING

Unless a right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director of the Department and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to section 42-1701A(3), Idaho Code. A written petition contesting the action of the Director and requesting a hearing shall be filed within fifteen (15) days after receipt of the denial or conditional approval.

ORAL ARGUMENT

If the Director grants a petition to review the preliminary order, the Director shall allow all parties an opportunity to file briefs in support of or taking exceptions to the preliminary order and may schedule oral argument in the matter before issuing a final order. If oral arguments are to be heard, the Director will within a reasonable time period notify each party of the place, date and hour for the argument of the case. Unless the Director orders otherwise, all oral arguments will be heard in Boise, Idaho.

CERTIFICATE OF SERVICE

All exceptions, briefs, requests for oral argument and any other matters filed with the Director in connection with the preliminary order shall be served on all other parties to the proceedings in accordance with IDAPA Rules 37.01.01302 and 37.01.01303 (Rules of Procedure 302 and 303).

FINAL ORDER

The Director will issue a final order within fifty-six (56) days of receipt of the written briefs, oral argument or response to briefs, whichever is later, unless waived by the parties or for good cause shown. The Director may remand the matter for further evidentiary hearings if further factual development of the record is necessary before issuing a final order. The department will serve a copy of the final order on all parties of record.

Section 67-5246(5), Idaho Code, provides as follows:

> Unless a different date is stated in a final order, the order is effective fourteen (14) days after its service date if a party has not filed a petition for reconsideration. If a party has filed a petition for reconsideration with the agency head, the final order becomes effective when:
>
> (a) The petition for reconsideration is disposed of; or
> (b) The petition is deemed denied because the agency head did not dispose of the petition within twenty-one (21) days.

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, if this preliminary order becomes final, any party aggrieved by the final order or orders previously issued in this case may appeal the final order and all previously issued orders in this case to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of this preliminary order becoming final. See section 67-5273, Idaho Code. The filing of an appeal to district court does not itself stay the effectiveness or enforcement of the order under appeal.

Erick,

I have no problem with this. I think the language is acceptable.

What are your thoughts?

If you agree please let Dan know to move ahead and finish the license.

Thanks,
Zach

Subject: RE: Draft Licenses for O Gara Permits

Hello Erick,

I spoke with Shelley, and we have come up with the following language for conditions 2 and 5. Please review them and see if they would be acceptable.

Condition 2:

> Upon Notification the right holder shall maintain a measuring device and lockable controlling works of a type approved by the Department in a manner that will provide the watermaster suitable control of the diversion(s).

Condition 5:

> Rights 37-20653 and 37-20654 when combined shall not exceed a total diversion rate and maximum annual volume for ground water recharge of 35.10 cfs and 4,150 af; a total diversion rate and maximum annual volume for wildlife exceeding 30.70 cfs and 3,580 af; and a total maximum storage volume for wildlife storage volume of 150.0 af.

Please review these updated conditions and let me know as soon as possible if they will meet your client's needs.

Thank you.

Subject: RE: Draft Licenses for O Gara Permits

Hi Dan,
Thanks for putting these draft licenses together. They look really good. Just a couple of comments for you and Shelley to consider.

1. Condition 2: I know that the standard condition is to include language about lockable controlling works that the watermaster can control the diversion. I would ask IDWR to consider removing the language regarding the lockable controlling works for the following reasons.
    a. There are lockable controlling works at the diversion from the Big Wood River and throughout the canal system.
    b. All flow at the point of diversion needs to come onto Silver Springs Ranch without flooding the neighbor. There is no where else for the water to go.
2. Condition 5: The language on this condition is odd, and could be interpreted incorrectly. I think that we are all on the same page, but my fear is what someone will interpret this to mean in 20 years. I'm not sure what the phase "total annual maximum diversion rate and volume" means.

I would suggest that IDWR consider the following suggestions on these two conditions on both licenses.

1. Condition 2: The right holder shall maintain a measuring device of a type approved by the Department.

2. Condition 5: Rights 37-20653 and 37-20654 when combined shall not exceed a maximum diversion rate for groundwater recharge of 35.10 cfs and a total annual diversion volume for groundwater recharge of 4,150 af; a maximum diversion rate for wildlife of 30.70 cfs and a total annual diversion volume for wildlife of 3,580 af; and a total maximum storage volume for wildlife storage of 150.0 af.

Thanks again. If you have any questions, please do not hesitate to contact me or Zach.
Regards,
Erick

MEMORANDUM

TO: Water Right File 37-20653 and 37-20654

FROM: Daniel Nelson – Analyst 3

DATE: July 25, 2018

SUBJECT: Licensing Review of Water Rights 37-20653 and 37-20654

The field report for these permits were submitted by Jeffery Rau of Brockway Engineering. Both of these permits were identical except for the source and points of diversion. 37-20653 diverted wastewater from the District 45 Canal, and 37-20654 diverted wastewater from the Baseline Canal. Both permits authorize 25 cfs from each canal for wildlife, ground water recharge and diversion to storage. They also both authorize 150 af for wildlife storage.

The field exam performed on these two permits were done in the winter months, so there was no measurements done, and there were several issues raised. The field report was accepted by the Department, but they didn't have the information required to license these permits. On March 26, 2018, I contacted the permit holder requesting additional information to complete the field report. On May 1, 2018, G. Erick Powell of Brockway Engineering replied to my letter. The information supplied in this letter provided confirmation of the measurement device requirement, water quality monitoring, and I agreed with the 876 af for a volume for ground water recharge calculated by Mr. Powell. However, it was determined later on that the volume for the ground water recharge should be increased based on the amount of water diverted to the two gravel pits through the Price Lane Diversions.

However, I was still concerned with the volume calculated for the irrigation use and the volume diverted from each of the canals. On May 19, 2018, I contacted Mr. Powell and asked for additional information that showed the amount of water diverted from each canal, and the amount of water diverted for irrigation uses. Mr. Powell responded on May 31, 2018. After reviewing the information supplied on May 31, 2018, I was confused by the information, and I asked for clarification on June 20, 2018. After several communications back and forth, it was decided that the best way to go over this information and understand what was going on was to meet with each other in person.

July 13, 2018, Shelley Keen and I met with Mr. Powell and Zach Hill. Mr. Hill monitors the measurement devices installed in this system. During this discussion, we discovered that it was really difficult to separate out the two systems and the irrigation. We did discover that the water diverted by these permits were being measured with ramp flumes accompanied by a data logger. Therefore, the information submitted by did accurately account for the water diverted in 2015, 2016, and 2017. No measurements were recorded during the development period, so determined that these measurements would provide a reasonable determination of the average flows and volumes of water diverted under this permit.

In the meeting, we were informed that water is diverted from each canal into a common ditch. The water in the common ditch is then diverted into two separate locations. There is a ditch that diverts from the common ditch that flows along Price Lane. The water in this ditch is measured through a measurement device referred to as the Price Lane diversion. The water in the Price Lane diversion is diverted to two gravel pits throughout the year. This water is measured and supplies all of the water used for recharge. The common ditch continues on to a small regulation pond where irrigation water is diverted from the regulation pond to the surrounding fields. Any water not used for irrigation flows through the regulation pond into a ditch referred to as the Wildlife diversion. The water in this ditch is also measured and sent down to the wildlife ponds on the southern portion of the property. The water diverted to these ponds is inconsistent, and is totally dependent on the amount of wastewater available at the end of the two canals.

The data supplied by Mr. Powell will be used to determine the flow rates for each use. These permits authorize a diversion rate of 25.00 cfs from each canal for a total of 50 cfs. The data supplied by Mr. Powell confirms that more than the 25.00 cfs was diverted from each canal. Mr. Powell's data also confirms that there are times that water is being diverted from one canal when the other canal is dry, but Mr. Powel did provide data that the maximum combined rate has exceeded the 50 cfs allowed by the combination of the two permits. Therefore, there will be no combined limitation on the diversion rate of the water being diverted from the canals.

The diversion rates for each individual use will be discussed by the use below:

Ground Water Recharge:

It was determined during the meeting that all of the water diverted through the Price Lane diversion would be attributed to recharge, since the water goes into 2 gravel pits. According to the information supplied by Mr. Powell, the maximum amount of water diverted through the Price Lane diversion was in 2017. The amounts diverted were 35.07 cfs and 4,199 af in 2017.

The two gravel pits are included in the wildlife storage volume, so the amount of water stored by these two gravel pits will need to be reduced from the total amount volume authorized by the ground water recharge. I have determined that the surface area of the two gravel pits have a surface area of 4.9 acres and 7.9 acres for a total of 12.8 acres, and the field report states that the average depth of these ponds is 4 feet. The total volume for wildlife storage attributed to the two gravel pits would be 51.2 af (12.8 X 4 = 51.2 af). The total volume available for ground water recharge is 4147.8 af.

Whereas either of the two canals can supply all of the water to the ponds, each right can be authorize a diversion rate of 25.00 cfs and 4,150 af. A diversion rate of 25.00 cfs can supply approximately 9,920 af during the 200 day irrigation season. A condition will need to be placed on both rights that when combined, the two rights will not exceed a combined diversion rate of 35.10 cfs and 4,150 af for ground water recharge. Since the ground water recharge only occurs when water is being delivered for irrigation, the season of use should be limited to the irrigation season of use of April 15 to October 31. Any non-irrigation recharge event to these ponds would need to be addressed through a new permit or temporary permit, since the source of these permits is waste water from the irrigation canal.

Wildlife Use:

According to Mr. Powell, all of the wildlife use is diverted through the Wildlife diversion. The maximum Wildlife diversions were 30.69 cfs in 2017 and 3,759 af in 2015. Once again, the wildlife storage uses will need to be removed from these uses. A total of 150 af of storage was authorized by the permit and both the field examiner and I confirmed that 50 af of water was stored in the ponds in 2006. The amount storage attributed to the Wildlife diversion would be 98.8 af (150 af – 51.2 af gravel pits = 98.8 af). The mitigation volume of 81 af covering the evaporative losses should also be removed from this amount. The total amount of volume attributed to wildlife use would be 3,579.2 af (3,759 af – 98.8 af storage – 81 af mitigation = 3579.2 af).

Whereas either of the two canals can supply all of the water to the ponds, each right will authorize a diversion rate of 25.00 cfs and 3,580 af. A diversion rate of 25.00 cfs can supply approximately 9,920 af during the 200 day irrigation season. A condition will need to be placed on both rights that when combined, the two rights will not exceed a combined diversion rate of 30.70 cfs and 3,580 af for wildlife use. Since the wildlife use only occurs when water is being delivered for irrigation, the season of use should be limited to the irrigation season of use of April 15 to October 31. If water is delivered to these ponds for wildlife use outside the normal irrigation season, as new permit would be required, since these permits only authorize wastewater from the irrigation canal.

Wildlife Storage:

The field examiner calculated the volume of the storage component to 148.8 af. He then rounded that number to 150 af. I was able to recreate the amount of water stored in 2006 to well over 150 af. I have not been to the property, so I cannot confirm the total volume based on my analysis, so I am going with the recommendation of 150 af to ensure everything is properly covered. The wildlife storage should have a year round season of use, since they can continue to store water after the irrigation season. The condition on the permits that required the total storage when the two rights are combined to be limited to 150 af should be carried forward to licensing. It should also be noted that 81 af of water on top of this storage component is delivered to the property to cover the evaporation losses.

Diversion to Storage:

The spreadsheet Mr. Powell provided clearly shows that more than the 25.00 cfs from each right was diverted. The spreadsheet also shows that maximum combined incoming diversion rate was 60.39 cfs measured in 2015. There should be a condition that limits the combined diversion rate for these two rights to 60.40 cfs when the two rights are combined.

Total Volumes:

The maximum volume diverted in the District 45 Canal is 5,293 af (2017), and the maximum volume diverted in the Baseline Canal is 5,497 af (2015). Therefore, the total volume for each of these rights cannot exceed the total maximum volume diverted from each canal.

Conditions:

Condition 1 (R05), 5(004), 7 (176), 8, 9 (X35), 10, 12, 13, and 15 should be carried forward to licensing. Conditions 10, and 12-14 are conditions placed on the permit per negotiations with Baseline Canal Company, so they should be carried forward to licensing. Condition 2 (01J) should be changed to condition R43 as is standard. Condition 3 should be carried forward to licensing, since it provides direction for the water used for mitigation on this permit. Condition 4 (106) can be dropped at licensing, since the permit holder provided proof they complied with DEQ monitoring requirements. Condition 6 (051) should be replaced with condition 933. The water for these permits do not reach the river, and never have reached the river. The canal companies have historically been diverted into gravel pits to seep into the ground water and/or evaporate. Generally condition 935 accompanies condition 933, but condition 935 is not necessary since the water doesn't reach the river. Condition 11 will be changed to condition 929 as is standard.

Subject: RE: Review of additional documentation supplied on May 31,2018 for permits 37-20653 and 37-20654

Hello Erick,

I finally have been able to meet with Shelley, and we feel it would be best to meet in person. I have done some more work on the permits, so hopefully, we can find a happy medium. Unfortunately, it is really difficult this time of year to schedule meetings. The times Shelley and I have open are the following:

Friday 13th -- 8:00 am to 2:00 pm
Friday 20th -- 8:00 am to 12:00 pm and 3:00 pm to 4:00 pm

We might be able to do some rescheduling to set up dates for the following:

Monday the 16th – 1:00 pm to 4:00 pm
Thursday the 19th -- 8:00 am to 12:00 pm or 3:00 pm to 4:00 pm

Please let me know if any of these dates work for you to see us in our office. I will schedule a conference room with computer available, so we can bring up maps and spreadsheets as needed.

I hope one of these dates works for you. Please let know as soon as possible, because our time can get scheduled rather quickly.

Dan,
Thanks for setting up a meeting with Shelley. I think that we can meet via teleconference – if you want to set that up as well.

Thanks,
Erick

Erick,

I couldn't agree with you more on the issues. I am happy to set up a meeting with Shelley. I think his perspective would be very helpful in this situation.

I will discuss this Shelley when he returns to the office and I will give you some dates we can meet. Do you want to meet in person here at our office or do you want to do a teleconference? Either way works, and we can set things up on our end.

Thank you for your comments, and we discuss these things further when we meet.

Dan Nelson

Dan,
I think that the best course of action is to set up a meeting when Shelley returns to discuss this in detail. Some of the issues that you raise are of concern, ones that are legal in nature. I'd like Shelley's perspective on these issues before we move forward and I need to know if Mr. O'Gara's attorney needs to weigh in on this discussion.

We are not trying to withhold information, in fact we have provided more flow measurement details for these permits than most permit field exams. Obviously, we would prefer to use the 2015 data, which has the maximum permit volume. There are multiple answers to your question of why the ET numbers don't jive with delivery numbers. The two primary answers are: (1) the ranch is located in the headwaters of Silver Creek. There are numerous times during the growing season when irrigation water is not applied because of the high water table. It is inappropriate to assume that CIR only is supplied by irrigation water. And (2) surface water supply is not constant throughout the year. Once irrigation water delivery has been cut, the groundwater is the only source of water. Recharge volume is typically spring runoff or fall excess.

Let me know when Shelley is available.
Thanks,
Erick

Subject: RE: Review of additional documentation supplied on May 31,2018 for permits 37-20653 and 37-20654

Erick,

Thank you for your quick response. Your response is the reason I wanted to send the information to you before I proceeded with licensing. I need to understand what is going on at the site. When I find something that doesn't make sense, I am counting on you to give me a detailed explanation on what is going on, and why the numbers don't make sense in a basic analysis. I can think of a number of explanations, but I need to hear what actually happened during these years to understand why the irrigation delivery is so low in 2015 and 2016. We have the delivery numbers, we just need to be able to make sense of what they represent. If I don't have that information, then I must go with the best information available, which in this case would be the 2017 data.

The reason we are asking these questions is to determine if there should be a limitation on the water use when the irrigation rights and these permits (referred to as wildlife uses in this email) are combined, and if anything needs to be done to the existing irrigation rights to make this practice legal. When licensing a permit we are looking at additional beneficial use and new water delivered to the new beneficial use. If you are using the irrigation water for the new beneficial use, then a water right transfer may need to be filed on the portion of irrigation water being used for wildlife uses. If that is the case, then we would not include that portion of irrigation water usage for wildlife uses in this permit. If the irrigation rights are being delivered to the property but the irrigation rights are not being used for irrigation, then we would need to have a combined limitation condition for the wildlife and irrigation rights. However, this also creates an issue with the irrigation rights, because they don't include any of the wildlife uses, so there may be a need to file a water right transfer to correct these existing water rights.

If the water delivered to the wildlife uses do not use any of the water being diverted for irrigation, then we can license the permits without a combined limitation. This is why I chose to use the 2017 year, because my analysis clearly shows the water being diverted for irrigation is used of irrigation, and the water being diverted for wildlife use is actually additional water being delivered to the farm and only being used for wildlife uses. We can use the 2015 volumes for the wildlife use, but if there is no explanation for the discrepancies in the analysis, we may need to include the combined limitation conditions and possible adjustments to the existing water rights. The existing irrigation water rights don't list a wildlife use on them, so that issue will need to be resolved if some of that water from those rights are being used for the wildlife use.

If your client wishes to proceed using the 2015 data, we can certainly go down that path. All I need is confirmation from you that some of the irrigation water is being used for wildlife uses instead of irrigation uses. If they are diverting water under the irrigation rights to the wildlife use, then I do agree with you that we should meet to figure out how we want to address this issue for the combined limitation conditions, possible changes to the existing irrigation rights, and possible water right compliance issues.

I am going to be out of the office tomorrow and Friday. Tuesday through Thursday next week I am available. Shelley is out of the office until next Friday, so I can't schedule for him until he gets back. The following week (July 2 through July 6) we may have time to meet with you Tuesday (July 3) in the morning or Thursday (July 5), but I won't be able to schedule those days until Shelley returns next week.

Please let me know what you think is the best path to follow, and I will be happy to work with you to put together a meeting. Unfortunately, scheduling meetings this time of year is difficult, so it could be a couple of weeks before we can find a time that works for everyone.

Dan,
I would like to visit with you and Shelley about this. I think that I can follow your math, but unfortunately I think that there are some errors with your analysis and assumptions. When would you both be available to discuss this in more detail?

Thanks,
Erick

Subject: Review of additional documentation supplied on May 31,2018 for permits 37-20653 and 37-20654

Hello Erick,

I am sorry it has taken me so long to review the information you supplied on the O'gara property. I have attached a spreadsheet showing my review of the data. I used the Metric Data used in the Department's modelling program to determine if the information sounded reasonable. The Department's Metric Data

Specialist assisted me in acquiring the data and double checking the results. In my review of the information, it appears as though the 2017 data is really the only data that seems reasonable. The data for the 2015 and 2016 just didn't seem to match the irrigation requirements when put up against the Metric Data. Please review my spreadsheet to see how I came to this conclusion. If you wish to talk about it, I would be happy to go through the information with you.

Based on my review of the data, I feel there is a total of 5,715 acre-feet of water available for the two permits. Of that 5,715 af, I determine that approximately 3,070 acre-feet is supplied by the District 45 Canal and 2, 645 acre-feet of water is supplied by the Baseline Canal. These numbers don't really supply the amount of water diverted during the development period, but they do represent one of the best water years we have had in quite in some time. Therefore, I doubt we will get any numbers that would show a higher The 2017 aerial imagery also shows more standing water in this area than at any time during the development period. Therefore, I believe it is the best representation of the water actually diverted under the storage permits.

I will give a couple of weeks to review my data, and if I don't hear back from you, I will move forward with the licensing of these permits with this data. If you disagree with my assessment, I will be happy to talk it over with you.

Thank you for the information. It really helped to see how the information was split out in your spreadsheet.

Respectfully,

Daniel Nelson

Year	Acres	Mean CIR mm	CIR ac-ft	CIR ac-ft/acre	Possible GW Irrigated acres	Possible GW CIR ac-ft*	Possible SW CIR ac-ft	Diversion Volume needed at 10% losses**	Diversion Volume needed at 20% losses**	Diversion Volume needed at 30% losses**	Volume Attributed to Irrigation per Water Right Examiner Spreadsheet	Actual Losses by Percent
2015	2,011	566	3,733	1.9	721	1,338	2,395	2,661	2,993	3,421	1,829	-30.9
2016	2,011	345	2,274	1.1	721	262	2,013	2,237	2,516	2,876	2,278	11.6
2017	2,011	392	2,588	1.3	721	347	2,241	2,490	2,802	3,202	4,139	45.9

* Possible ground water usage was limited by the volume recorded in the Water District Records for the all of their wells. The records show a maximum diverted from the wells of 1851.9 af (2015), 261.5 af (2016), and 346.69 af (2017)

** It is assumed that some water will be lost in the irrigation effiency of the sprinklers and pivots used on this property and some ditch losses. Therefore, the volume of water needed to attain the CIR ac-ft was adjusted based on 10% to 30% losses to see if the diverted volumes were reasonable.

The CIR calculations shown above represent the consumptive use of water minus the annual precipitation. These calculations were determined from the Meteric data currently being used in the Department's modeling programs. The modelling was performed on the entire 2,011 acre place of use, so the average use was used to ensure that the non-irrigated or fields irrigated through a portion of the year would be addressed. There is also 721 acres that can only be irrigated with ground water, that were removed from the overall average. The volume attributed to this acres were alloted the full amount per acre determined by the metric system or by the actual volume recorded from the wells in the Water District's records. It is the owner's responsiblity to ensure the Water District records are accurate, so if they are not correct, then the owner should ensure they are corrected. Based on the information supplied above, 2017 is the only year that seems reasonable when comparing the total diversion rates, irrigation rates, and the storage rates. It is possible that the 2016 season could be used, but the less than 20% of irrigation efficiency rating and ditch losses don't sound reasonable for this type of water system. However, when you consider that the majority of sprinkler type systems are 70 to 80 percent efficient and earthen ditches can have up to 30% ditch loss, 11.6 % efficiency of the system doesn't seem reasonable. However, when you consider the ditch losses and the sprinkler eviciencies, the 2017 numbers although a bit high do seem reasonable. The 2015 data just doesn't seem reasonable, since we know the ditches are dry during the winter.

Subject: Flow Data for Canals
Attachments: Summary tables of different flow measurement scenarios.pdf; O'Gara Summary of measurements.xlsx

Hi Dan,
Attached to this email is a spreadsheet that summarizes the incoming surface water to the O'Gara property and the measurements for water diverted for Wildlife/Recharge uses. I have also summarized several different scenarios of peak flow rates, and the combinations of the flows from the Baseline and District 45 Canals and the diversions for wildlife or recharge use.

I'd like to request that you send us a draft copy of the license approval to review prior to issuing the final license in an effort to prevent any petition for reconsideration, given the complex nature of this license exam.

I am available to discuss this further, if you have questions.
Regards,
Erick

Subject: RE: Additional information regarding water right permit nos. 37-20653 and 37-20654

Hello Erick,

I called today (May 18, 2018) to talk about the additional information regarding the Ogara permits, and it appears as though you are out of the office today. I have had the opportunity to speak with my supervisor, and I wanted to speak to you about what was needed. To go over the issues I had questions about I separated everything out in order of the letter you wrote on May 1, 2018.

1.) **Measurement Device Requirement –** We are satisfied with the measurement devices that were installed, and feel the measurement program that Zach Hill is doing more than meets the requirements for these permits.
2.) **Water Quality Monitoring** – With the information you submitted in your letter and the information submitted to me by Mr. Hill, we believe these requirements have been met and do not need any further information on this issue.
3.) **Wild Life Volume –** This is the only area that we feel we need additional information to ensure we fully understand what is happening at this location. It is our understanding the irrigation rights and these permits are all diverted through the same measurement devices. I was expecting data that followed the following parameters:

> (Base Line Canal rates/volume – Base Line Canal irrigation rights use) + (45 Canal rates/volume – 45 Canal Irrigation rights use) = diversion rates and volumes available for permits.

Until we can see information that shows us the total diversion rates and volumes diverted and how you determined those rates and volumes when considering the total rates and volumes needed for the irrigation rights that are also
diverted through the system, we cannot move forward with the licensing of these permits. Most importantly, we need the calculations so we can verify if the information you are using matches the information we have in our records. This is a requirement that is spelled out in the Idaho Administrative Rules IDAPA Beneficial Use Rule 37.03.02.035.01.d which states the following:

> Any interconnection of the water use being examined with other water rights or with other conveyance systems shall be described on the field report. Interconnection includes, but is not limited to, sharing the same point of diversion, distribution system, place of use, or beneficial use. The examination report shall also include an evaluation of how the water use being examined is distinct from prior existing water rights and provides an alternate source of water or increment of beneficial use not authorized by prior existing water rights.

4.) **Ground Water Recharge –** I reviewed the volume that you calculated in the letter. I found that there are different soil types at the pond depths that allowed for a larger volume amount. My review determined that the volume you calculated in your letter of 876 af is reasonable. Therefore, we will use the volume that you calculated in the licensing of these permits.

As you can see from the above overview of the information that we have reviewed, the only point that is currently holding up the licensing of these permits is a clear description of the amount of water being diverted and beneficially used over the existing irrigation water rights diverted through the two canals. Even though we are only allowed to look at the time during the development period for addressing the water use, we can use more recent information if it is available and compare that information to the development period. The three years presented in the data give a very good range of water flows from very low water availability in the entire system to an abundance of water in the system, so the data collected can be used to determine the diversion rates and volume amounts for this system. However, we simply need a clear evaluation of the amount of water measured minus the amount of water currently used under existing rights to find the final amounts that are available for these permits. Most impotantly, we need to see all of the calculations you used to determine the volumes.

I hope this helps. Please call me at you earliest convienience if you have any more questions.

Hi Dan,
I just left you a voice message. I think that there is confusion regarding what was reported, so if you can give me a call this afternoon, I think that we can clear this up quickly.

Next week should be fine to discuss the other items.
Thanks,
Erick

Erick,

I am going to be out of the office tomorrow and most of next week. I will give you a call when get back into the office and can follow up on a couple of things. I also want to speak with Shelley. I want to find out from him whether or not we are going to need the total amount of water delivered with the irrigation and wildlife separated out, or if the information you supplied is sufficient to move forward with licensing. Where the irrigation and the wildlife water is diverted through the same measurement devices, I was expecting to see an accounting of all of the water.

I also want to be able to let you know about the request to waive the headgate requirement. I haven't had time to go over the recharge information yet either, so I will work on that before I give you a call.

I think we are good with the monitoring information you supplied from DEQ and the water quality monitoring information, and I think we are also satisfied with the measurement device requirement information.

I think you have all of the pieces, it is just putting them all together in a manner that will prevent additional questions later on that will hold up the licensing of the permits.

Hi Dan,
I can understand you confusion, as the system is very complex. All of the measurements that I provided you in the Appendix and are reported on Page 5 are water that has been diverted for wildlife and/or groundwater recharge only, not for irrigation. There are additional water measurement devices that are in place that measure and record all of the water coming onto the ranch, but the license exam is just for the wildlife and/or groundwater recharge portion only.

I think that it would help if we discussed this on the phone. When might you be available?
Thanks,
Erick

Erick,

Thank you for the spreadsheet. I can see where you got the numbers for the table on page 5 of the letter. I am still need a bit of an explanation on headings. The headings on the spreadsheet say "Wildlife" and "Price Lane". My first assumption is that Price Lane was the water flowing through the measurement devices for the irrigation rights, and the Wildlife was the water measured through the measurement devices attributed to the wildlife use and the ponds. It was

my understanding that the measurement devices measured both the irrigation and the wildlife water. However, in the table on Page 5 of your letter, you count the total water use towards the wildlife use. It is clear from the aerial that they have irrigated, so is the irrigation water diverted from a different location or do these measurements include the irrigation water delivered to the farm? I can't include the water diverted for irrigation with the water diverted for wildlife use, so I am hoping you can help me understand how the wildlife use and the irrigation use is separated.

Dan Nelson.

Hello Erick,

I have gotten back to reviewing the Ogara field reports. And the additional data that you submitted. Is there any way I could get the measurement data in a Excel spreadsheet, so I can work through the data. This would save me from having to data enter all of these numbers into a separate spreadsheet to verify the information provided, and would reduce the potential for errors on my part. It would also significantly reduce the amount of time I would need to enter all of the data and review the data.

I also wanted to know if the measurement data is in acre feet or in cubic feet per second. From what I can tell from the data, it appears as though it is in cfs, but I want to make sure before I start my review.

Thank you.

Dan Nelson

Dear Dan,
I have attached the additional information that you requested regarding the water right permits 37-20653 and 37-20654. I will also mail you hard copies of all of this information, but wanted to make sure that you had this today. If you have questions regarding any aspect of this data, please do not hesitate to contact me.

Regards,
Erick

Re: Additional Information regarding Field Exam for Water Right Permit Nos. 37-20653 and 37-20654
Project No. 327-26-2011

Dear Mr. Nelson,

We have enclosed the following information regarding water right permit nos. 37-20653 and 37-20654 as you requested in your letter dated March 26, 2018. The proofs of beneficial use and the beneficial use field exams for these water right permits were submitted to IDWR in 2010. Some data and/or information that was requested could not be found prior to 2010, however we have submitted all available and relevant information with this letter.

It is important to understand the system that these waste water right permits were filed on. Water right permit no. 37-20653 is a waste water right permit for 25 cfs from the District 45 Canal system. The District 45 Canal provides approximately 137 different water rights throughout the Bellevue Triangle area and the point of diversion from the Big Wood River is located NESWNW (Lot 3) Section 36, T2N R18E. The permit holder has 9.55 cfs water rights from the District 45 system. The District 45 Canal is shown in Figure 1.

Water right permit no. 37-20654 is a waste water right permit for 25 cfs from the Baseline Canal system. The Baseline Canal provides approximately 102 different water rights throughout the Bellevue Triangle area and the point of diversion from the Big Wood River for the Baseline Canal is located NWSESW Section 12, T1N R18E with a point of re-diversion in NWSENW Section 25, T1N R18E. The permit holder has 11.6 cfs water rights delivered through the Baseline Canal system. The Baseline Canal is also shown in Figure 1.

Furthermore, the permit holder is at the very end of both the District 45 and the Baseline Canal systems. There are no other water right users downstream

FAX: 736•8506

of the permit holder on either canal system. Any additional water that is left in either canal system must go through the permit holders private ditch system or be diverted to potentially flood neighboring properties or public roadways. One of the reasons why the permits were filed originally was because historically the permit holder accepted all of the waste water from both canals.

Measurement Device Requirement:

One condition of the permits clearly states that the permit "holder shall install and maintain a measuring device and lockable controlling works of a type acceptable to the Department as part of the diverting works." Figure 2 shows the measuring devices that were in place in 2003. The measurement information and rating curves were provided to the watermaster. However, there were no installed recording devices at the measurement locations and no record of diversion rates or volumes are available. During the field exam, no waste water was flowing, so no measurements could be collected.

New broad crested weir measuring devices with stilling wells were installed in 2014 with pressure transducers. The same broad crested weir design was installed at five different locations throughout the ranch property. A map of their locations is shown in Figure 3. The rating curve and rating table are also included in Appendix A. The pressure transducers record depths of water at regular intervals (at least hourly) and flow rates are determined from the rating curve. It is my opinion that the measuring device condition on these permits has been fully satisfied with the measurement plan available during the field exam and the broad crested weirs installed in 2014.

No lockable controlling works are installed at the point of diversion for these waste water permits. The District 45 and Baseline Canals both have lockable controlling works at their points of diversion from the Big Wood River. In addition, the Baseline Canal system does have a lockable headgate to prevent water from continuing to the permit holders property (Location identified in Figure 3 as the Baseline Canal Silver Springs Headgate and picture of the controlling works is shown as Figure 4). The permit holder requests IDWR to wave the requirement to have a lockable controlling works at the listed point of diversion for the following reasons:

1. The source of the water is waste water, the permit holder cannot call for the water right, therefore if waste water is present it can be used, and when it is not present, it cannot be called for.

208•736•8543

FAX: 736•8506

2. The District 45 and Baseline Canals have substantial controlling works on their respective systems, including, but not limited to, the lockable controlling works at the canal headgate.
3. The waste water delivery system (District 45 Canal, Baseline Canal, Private Ditches) are the same delivery system of valid irrigation rights and should be left open for continued beneficial use of the irrigation rights.
4. Excess water has historically been delivered through the permit holder's property. Blocking waste water would potentially cause neighboring lands and/or Baseline Road to flood. A picture of the two ditches (District 45 and Baseline Canals) immediately upstream on the confluence, taken from Baseline Road is shown as Figure 5.

Water Quality Monitoring:

Water quality sampling was done in May and June of 2003 as outlined in the 2003 communication referenced in your letter. The water quality results are provided as Appendix B. It is not known why this sampling was not continued. Jeff Rau may have had verbal or email communication from DEQ regarding the monitoring program. Or when Jeff Rau left Brockway Engineering, no one was instructed to continue sampling water quality. We can confirm that DEQ has copies of 2003 water quality data which at least was provided by Zach Hill to DEQ.

Furthermore, Zach Hill recently met with and discussed the groundwater recharge water quality monitoring plan with Ed Hagan and Kathryn Elliott, Idaho Department of Environmental Quality. After the first year of monitoring, DEQ will reevaluate the groundwater monitoring plan. DEQ provided the following written communication regarding project groundwater monitoring:

> Thank you for the submittal of the Silver Spring Ranch recharge project proposal, including the historical ground water quality monitoring plan from 2003 and the project background and property management information provided in the pre-project meeting on April 13, 2018.
>
> Ed and I talked with our administrator, Barry Burnell, this morning regarding your project. We discussed that while this recharge project is unique and a may not impact beneficial uses of ground water, section 006.02 of the DEQ Ground Water Quality Rule (IDAPA 58.01.11) requires that we protect "existing and projected future beneficial uses of ground water and interconnected surface water." Due to the nature of this site, its hydrogeology, and proximity to surface water headwaters, there is reason to consider the potential impact of the recharge activity on surface water

FAX: 736•8506

beneficial uses when evaluating this project. The default beneficial uses for Silver Creek and its tributaries include cold water aquatic life and secondary contact recreation. As such, DEQ is requesting a ground water monitoring plan that characterizes the constituents that impact these beneficial uses, utilizing the spring discharge and subsequent surface water flow as a surrogate for direct ground water monitoring. The sample locations, constituents of interest, and sample frequency are identified below.

- Sample Locations:
  - Influent: DEQ requests samples be collected from a location prior to the recharge basin for the purpose of characterizing the influent (recharge water).
  - Surface Water: DEQ requests sample be collected from 3 surface water locations. In addition to the surface water sample locations identified in the 2003 ground water monitoring plan (Mud Creek and Grove Creek), DEQ requests samples be collected from Wilson Creek.
- Constituents of Interest:
  - It is requested that bacteria (E. coli), nutrients (total phosphorus, ammonia-nitrogen and nitrate-nitrogen), and temperature be collected from all sample locations. DEQ requests stream flow or spring discharge be provided with the analytical data collected.
  - If there is any chemical treatment of the recharge basin(s), DEQ requires sample collection for the chemicals used.
- Sample Frequency:
  - It is requested that the above-mentioned samples be collected monthly beginning in May and ending in November, for the first year of this project (2018).

Please submit two final amended copies of the monitoring plan, with the above information reflected, to DEQ state office for review and acceptance. After completion of one year of monitoring, the ground water monitoring frequency may be reevaluated per your request.

Please let me know if you have any concerns or questions.
Thanks.
Kathryn Elliott

It is my understanding that you have visited with your supervisor at IDWR, and this communication is sufficient to satisfy IDWR that the water quality concern associated with groundwater recharge has been complied with.

Wildlife Volume:

We have evaluated the diversion rates into the Price Lane wildlife pond and the eastern wildlife ponds from 2015 through 2017. The annual diversion volume for these years is presented in Table 1. Recorded hourly data is

BROCKWAY

2016 NORTH WASHINGTON STREET • SUITE 4

TWIN FALLS, IDAHO 83301

208•736•8543

FAX: 736•8506

provided in Appendix C. Unfortunately, we do not have diversion rate records prior to 2015 that used the 2003 water measurement plan.

Table 1. Annual diversion volume delivered through the Price Lane and Wildlife measurement devices.

Year	Max Wildlife Diversion Rate (cfs)	Wildlife Volume (acft)
2015	51.35	6,887
2016	40.47	5,695
2017	49.95	5,715

The permits list the wildlife storage volume as 150 afa. The condition on the permit says, "Rights 37-20653 and 37-20654 when combined shall not exceed a total annual maximum storage volume of 150 af." It is my understanding that this volume is the volume of the wildlife ponds, not the volume diverted into the ponds. Therefore, it is my opinion that the most appropriate annual diversion volume for these permits based on historical records is 6,887 afa. I would propose a combined condition on both waste water rights as follows: Rights 37-20653 and 37-20654 when combined shall not exceed an annual maximum diversion volume of 6,887 afa and a maximum storage volume of 150 af.

Groundwater Recharge Volume:

We approached the groundwater recharge volume in the same fashion that you outlined in your letter, using the seepage losses from ponds using IDWR's pond spreadsheet. Unfortunately, we were unable to replicate your seepage rate of 40 af.

Using the 2009 and 2017 aerial photography, we determined the pond sizes within the groundwater recharge/wildlife system as 46 acres. This is less than the authorized surface area of 46.4 acres in the water right permit conditions. Ponds located next to Price Lane are approximately 12 acres in size and have an average depth of approximately 10 feet. Using the Web Soil Survey, this ground has a soil classification of SM or 0.2 ft/day. This results in a seepage volume of 876 afa at just the Price Lane Ponds. This estimate is reasonable based on personal experience with water going into this pond and rapidly infiltrating into the ground. The spreadsheet with this data is available in Appendix D.

BROCKWAY

Hydraulics
Hydrology
Water Resources

The other ponds and ditches in the place of use have a surface area of approximately 33.9 acres and shallower depths. Based on the Web Soil Survey, we classified this area with ML soils that have a seepage rate of 0.02 ft/day. This results in a seepage volume of 248 afa. The spreadsheet with this data is available in Appendix D.

Combined together, the total calculated seepage volume for the groundwater recharge is 1124 afa. A similar combined condition could be given to both water rights: Rights 37-20653 and 37-20654 when combined shall not exceed an annual maximum groundwater recharge volume of 1124 afa.

Sincerely,

G. Erick Powell, P.E.

Seepage Loss Calculations

This spreadsheet has been designed by Idaho Department of Water Resources to estimate the total annual seepage losses from a pond.

FILE NUMBER	37-20653
REVIEWER	Tyler Maasjo
DATE	4/27/2018

User Input
Calculated value
Formula Explanations

INPUTS

Pond Surface Area (AC.)	12	AC.
Pond Surface Area (SQ. FT.)	522720	SQ. FT.
I used the following method to obtain my Soil Classification information:	NRCS Web Soil Survey	
My Soil Classification is	SM	
Suggested Seepage Rate (FT./DAY)	0.2000	FT./DAY

Formula: (Surface Area X Seepage Rate) X 7.48 = Gallons Per Day Loss

Convert to GPD	781989	GPD
Total Seepage Loss (AFA)	875.9	AFA

Though sand and gravel seepage rates may actually be higher, the maximum allowable rate is 0.2 ft/day, pursuant to Administrative Memo "Seepage Loss Standards for Ponds and Reservoirs."

Suggested Seepage Rates for Different Soil Types:
GW, GP, GM, GC, SW, SP and SM (silty sand, sand silt mixtures and gravel mixtures) = **0.2 ft per day**
OL and ML (inorganic silts - very fine sands, silty, or clayey fine sands) = **0.02 ft per day**
SC (clayey sands, sand clay mixtures) = **0.007 ft per day**
CL (Low to medium plasticity clays) = **0.003 ft per day**
MH, OH, PT and CH (high plasticity clays) = **0.0003 ft per day**
LINED PONDS (liners can be chemical, fabric, or bentonite) = **0 ft per day**
Ponds Intercepting Groundwater (excavated ponds filled by ground water) = **0 ft per day**

PLEASE NOTE: The initial basis for the Suggested Seepage Rates in the table above is found on Page 16 of Seepage from Fish Ponds, Bulletin 599, August 1989 Alabama Agricultural experiment Station, Auburn University, Auburn University Alabama. If you don't know the soil type, please refer to the map provided at the NRCS Web Soil Survey (Tab #1) , an ArcMap Soil Classification Map (Tab #1.1), or published NRCS Soil Survey (Tab #1.2) . Use "0" if the pond fill relies on the water table.

Appendix D
Groundwater Recharge Calculations

Seepage Loss Calculations

This spreadsheet has been designed by Idaho Department of Water Resources to estimate the total annual seepage losses from a pond.

FILE NUMBER	37-20653
REVIEWER	Tyler Maasjo
DATE	4/27/2018

User Input
Calculated value
Formula Explanations

INPUTS

Pond Surface Area (AC.)	12	AC.
Pond Surface Area (SQ. FT.)	522720	SQ. FT.

I used the following method to obtain my Soil Classification information:	NRCS Web Soil Survey	
My Soil Classification is	SM	
Suggested Seepage Rate (FT./DAY)	0.2000	FT./DAY

Formula: (Surface Area X Seepage Rate) X 7.48 = Gallons Per Day Loss

Convert to GPD	781989	GPD
Total Seepage Loss (AFA)	875.9	AFA

Though sand and gravel seepage rates may actually be higher, the maximum allowable rate is 0.2 ft/day, pursuant to Administrative Memo "Seepage Loss Standards for Ponds and Reservoirs."

Suggested Seepage Rates for Different Soil Types:
GW, GP, GM, GC, SW, SP and SM (silty sand, sand silt mixtures and gravel mixtures) = **0.2 ft per day**
OL and ML (inorganic silts - very fine sands, silty, or clayey fine sands) = **0.02 ft per day**
SC (clayey sands, sand clay mixtures) = **0.007 ft per day**
CL (Low to medium plasticity clays) = **0.003 ft per day**
MH, OH, PT and CH (high plasticity clays) = **0.0003 ft per day**
LINED PONDS (liners can be chemical, fabric, or bentonite) = **0 ft per day**
Ponds Intercepting Groundwater (excavated ponds filled by ground water) = **0 ft per day**

PLEASE NOTE: The initial basis for the Suggested Seepage Rates in the table above is found on Page 16 of Seepage from Fish Ponds, Bulletin 599, August 1989 Alabama Agricultural experiment Station, Auburn University, Auburn University Alabama. If you don't know the soil type, please refer to the map provided at the NRCS Web Soil Survey (Tab #1) , an ArcMap Soil Classification Map (Tab #1.1), or published NRCS Soil Survey (Tab #1.2) . Use "0" if the pond fill relies on the water table.
