I think I'm just going to reduce my cfs down to the .02 per acre for a total of .10 cfs if you could help me draft that up please. When I spoke to the board he told me that would satisfy them to do that and it also states that in the protest so I'm assuming that's all I need to do. Thank you so much for helping me with this.

Richard

Hi Richard,

If you want to increase any part of your application (diversion rate/# acres/etc), I could help you draft the changes but be aware that we would have to re-advertise it which involves a \$50 re-advertising fee and it would be subject to an additional protest period. One other thing to keep in mind is the metering requirement. You would probably want to confirm with Cindy Yenter in our Salmon office, but there may be a difference in metering requirements for over 5 acres vs. 5 acres or less.

If you want to reduce the rate down to .02 cfs/ac, I could draft that change for you and send it to you for your signature. There's no re-advertising or anything if you reduce your original filing. If you want to go that route, it would probably be good to ask the Board what exactly they would want in order to withdraw their protest so that processing could resume.

Let me know if you have any other questions.

Allison

I spoke with the board today and he said maybe I could increase my acreage to get the bit of extra I actually own 6 acres and only applied for 5 do you think that is still an option to increase that part or would I have to go through the whole application process again? Also if I just decide to settle with the .02 cfs per acre to satisfy the board how do I amend the application?

Richard,

I had another idea for your property that I wanted to share in case it is helpful. Sometimes landowners will divert their water into a small pond at the diversion rate listed on their permit, but then they can pump out of that pond and into the irrigation system at a higher rate. There is something called the 24 hour fill rule which allows you to have a pond for this purpose without having a specific water right for storage as long as the pond doesn't hold any more water than the amount that could be diverted in 24 hours at the rate listed on the permit.

This link is an internal memo that we use for guidance. The bottom of page 2 shows an example calculation. <https://idwr.idaho.gov/files/water-rights/20130418-Utilization-of-the-24-Hour-Fill-Allowance-for-Impoundments.pdf>

Feel free to give me a call if you have any questions or we could talk about some example calculations.
