Re: 206 Map Update

I visited Justin Wooten of Black Mesa Farms on April 4, 2018, to evaluate his irrigation practices. There hasn't been any recent 206 map submitted even though they are required to submit one each time they change the irrigated acres (it appears the irrigated acres change on an annual basis).

During my visit I received 206 maps from Black Mesa that reflects both the regular season acres and the late season (fall) irrigation to prep the field in the next season dating back to 2016. Because in a single year they can change their 838 irrigated acres to accommodate late season prep, the place of use digitized exceeds the 838-acre limit. Please refer to the submitted map that deciphers the regular season and late season irrigated place of use.

- Rachael in WR's conducted the shape update & updated the spring season POU at this time & she will re-visit the 206 map to update the shape for the fall.
