

April 12, 2018

Leslie Nona
Chairperson
Dry Creek Rural Neighborhood Association
6411 West Dry Creek Road
Boise, ID 83714

*Subject: 2017 Annual Water Level Monitoring Report for the Dry Creek Ranch
Aquifer Monitoring Plan*

Dear Leslie,

This letter summarizes the status of the Dry Creek Ranch Aquifer Monitoring Plan (Plan) dated April 2008.

Description of Monitoring Plan. The Plan was implemented by JMM Dry Creek (JMM) as part of a Water Rights Agreement (Agreement) between the Dry Creek Rural Neighborhood Association (DCRNA) and JMM Dry Creek (JMM). The Agreement, with an effective date of January 14, 2009, was established to resolve the DCRNA protest of JMM's Application for Permit 63-32423 and to avoid a possible protest of JMM's Application for Transfer 73817.

Note that JMM changed its name to P&F Dry Creek, LLC, in July 2014. Idaho Department of Water Resources changed the name on Permit 63-32423 on August 25, 2014. JMM subsequently assigned Permit 63-32423 to BHH Investors 1414 LLC on August 31, 2016. Monitoring is currently being conducted on behalf of BHH Investors 1414 LLC.

Monitoring Wells. Well locations are shown on Figure 1 in Appendix A.

The Plan originally included six wells located on the Dry Creek Ranch property and four off-site wells. The on-site wells were Well 9, Payne Well, Big Pump Well, Hot Well, Stockwater Well, and Pasture Well. The four off-site wells were the Beliveau Well, Thompson Well, Graves Well, and the Dater Well. Monitoring of these ten wells began in June 2007. Measurements were taken every two months through 2008, and then every 6 months thereafter. The most recent set of measurements were taken on April 10, 2018.

- Artesian pressure has not been measured from the Pasture Well since April 2010. The well head was leaking at this time, preventing an accurate measurement of pressure. The Pasture Well was abandoned by Post Drilling Inc. on December 8, 2016, and has been removed from the monitoring plan. A copy of the well abandonment report can be found in Appendix B.

- During Fall 2012 monitoring, SPF Water Engineering's (SPF) electric line well sounder became snagged somewhere along the drop pipe/power cable in the Graves Well. Any future monitoring at this well would require installation of a well sounding tube. Connie Graves declined SPF's offer to install a well sounding tube free of charge. As a result, the Graves Well has been removed from the monitoring plan.
- During Spring of 2015, the new homeowner of the Thompson Well requested that his well be removed from the monitoring program. It has not been monitored since.
- The original Dater Well was monitored through April 2016. This was a shallow well with a static water level that fluctuated between 35 and 51 feet. Measurements in October 2016 and April 2017 encountered an obstruction above the water level at approximately 40 feet. A new, deeper well was drilled in 2013 which has been monitored in place of the shallow well since October 2016.
- Artesian pressure was measured at the Payne well through April 2013. Between April and October 2013, the artesian flow was redirected down a pipe with no hose bib so pressure measurements were no longer possible. The Payne Well was abandoned by Post Drilling Inc. on April 3, 2018 by filling it with cement and was observed to no longer be flowing during the April 10, 2018 monitoring event. A copy of the well abandonment report can be found in Appendix B. The Payne Well will be removed from the monitoring program.

The Agreement also required adding six off-site DCRNA wells to the Plan. Seven (7) DCRNA wells have been added so far. Three were added in April 2009 (Johnston, Podolan, Rishel), three more were added in April 2010 (Chapin, Golis, Hull), and one was added in April 2016 (Jordan). The wells added in 2009 and 2010 were measured every two months during their first year in the monitoring program, then every six months thereafter. The Jordan well has been measured every six months since it was first included in the monitoring program. All of the named wells were most recently measured on April 10, 2018 and are included on Figure 1.

Monitoring Program Status. Measurements from six of the ten original wells (excluding the Pasture Well, Thompson Well, Graves Well, and Payne Well) plus seven off-site DCRNA wells will continue to be taken twice a year (April and October) until termination of the program, measurements are no longer physically possible, or a well is withdrawn from the program by the well Owner. In accordance with the Plan, monitoring will continue until at least 2025 (i.e., 15 years after permit approval).

Fall 2017 and Spring 2018 Monitoring. Fourteen wells were visited during the Fall 2017 and Spring 2018 monitoring events. At least one measurement was obtained from 13 of the 14 wells.

- The Payne Well was not measured due to flowing conditions in October 2017 and abandoned in April 2018, making measurement impossible.

- The obstruction previously encountered in the Golis Well appears to no longer be an issue and the well water level was measured in October 2017 and April 2018.

Summary of Data. Water level measurements collected to date from 18 monitoring wells are presented in Table 1 in Appendix A. In order to more clearly present the collected data, the measurements are presented in three figures in Appendix B. Figure 2 shows data for wells with depth to water of 100 feet or less, Figure 3 shows data for wells with depth to water of greater than 100 feet, and Figure 4 shows pressure measurements at the artesian wells.

Please contact myself or Jason Thompson at SPF (208-383-4140) with any questions you may have regarding the information contained in this letter.

Sincerely,

Sean Albertson, E.I.T.
Associate Engineer

(1) No measurement, most of artesian flow escaping from well head

(2) Pumping water level; pump on during measurement

(3) Sounder engaged in well, unable to measure water level; removed from program

(4) No measurement; pump on, unable to measure PWL due to constriction at approximately 220R

(5) No measurement; artesian flows bypassing pipe with hose bib used for pressure measurement

(6) No measurement; blockage between drop pipe and well casing at approximately 182 feet depth

(7) New head with hose bib was installed. No water was flowing; appears to be isolated with gate valve, but unable open gate valve to verify.

(8) New hose ewer requested that his well be removed from the monitoring program

(9) Gate locked, unable to gain access to well

(10) Pump on, water spraying all around tap opening, unable to collect measurement

(11) Well currently used for providing water for well drilling

(12) Well abandoned 12/08/2016

(13) Well abandoned 4/3/2018

APPENDIX B
WELL ABANDONMENT REPORTS

ID NUMBER _____

Payne Well

State of Idaho Department of Water Resources
AUTHORIZATION TO ABANDON (DECOMMISSION) A WELL

1. WELL OWNER INFORMATION: (The well owner is the person who legally owns the property.)

Name: BHH Investments 1414 LLC
Current Mailing Address: 1025 S Bridgeway Pl, Suite 290
City: Eagle State: ID Zip Code: 83616
Telephone: (_____) _____

2. WELL LOCATION: (GPS required in Degrees Decimal Minutes.)

Twp. 5N, Rge. 1E, Sec. 35, _____ 1/4 NE _____ 1/4 NE _____ 1/4
(10) (40) (160)
Gov't Lot No. _____ County Ada Lat. 43° 44.016 Long. 116° 17.660
Street Address of Well Location: Off of Hwy 55 Between W. Brookside Ln & W. Dry Creek Rd.
City: Eagle Lot, block and subdivision: _____

3. TYPE OF WELL:

DOMESTIC MONITORING IRRIGATION OTHER _____ (Describe)

4. WELL INFORMATION: (*Casing size, well depth & static water level data are required.)

Well Tag Number: None Previous Drilling Permit Number: Unknown
Water Right Number: _____
Well Log on File? (Provide if available) Yes No Temperature: less than 85°F greater than 85°F
*Casing Size: 8-inch *Material: Steel *Well Depth 250+ ft. (measured)
*Current Static Water Level: _____ (measured) Flowing Artesian? Yes No

5. REASON FOR ABANDONMENT OF WELL:

No longer needed

6. PROPOSED METHOD OF ABANDONMENT: (Must be consistent with IDAPA 37.03.09. This Application must be reviewed prior to commencement of abandonment.)

Fill hole from bottom to surface with cement

7. Drilling company name: Post Drilling Inc. company lic. No. 670

8. Date of abandonment: 4/3/2018

9. Applicants signature: [Signature]

10. Title: Principal Driller date: 4/3/2018

ACTION OF THE DEPARTMENT OF WATER RESOURCES

This application for abandonment has been reviewed by IDWR on _____ / _____ / _____

This review does not constitute an endorsement by IDWR of the proper abandonment of this well. Pursuant to Section 42-238(12), Idaho Code, all abandonments must meet the requirements of the Administrative Rules for Well Construction Standards. **Abandonment of this well will require the services of a well driller licensed in the State of Idaho unless a waiver has been granted.**

Signature of Authorized Department Representative
