Jim,

We updated the shape for 37-2165B this morning pursuant to your request. It is not yet available for viewing online. I believe that it updates to the public website overnight, so it should be available for viewing of the website tomorrow morning.

Corey,

This will work - thanks. Let me know when the updated shape is online.

Jim,

I took a look at your maps that you provided and looked at some 2017 imagery and made an attempt to recreate a shape that hopefully covers what you and your client are looking for. I have attached an image that shows the shape I created with 2017 imagery as a background. This shape is 6.7 acres. If this would work, I can update 37-2165B to this shape.

Corey,

Attached is what we would like to be the new GIS POU for this water right. The actual area within the yellow is somewhat more than the 6.7A allowed to be irrigated. However, a portion of this along the West and North fence lines is only drip irrigation of trees. I have attached a second photo from June 2017 highlighting this area which shows the trees. Is this acceptable? If so, we will proceed with a Water Supply Bank lease application for the 2.84A that are not irrigated within this new POU. Thanks for your help.

Corey,

Thanks - this makes the most sense. We will get you the new shape file soon.

Jim,

If I understand correctly, all you are wanting to do is to change the GIS shape file for the water right without changing a recorded element of the water right (6.7 acres will still be irrigated within the SWSW and no conditions on the right will change). If the water right holder provides a new 6.7 acre GIS shape within the SWSW of Section 1, along with a request to update the shape, we can update the shape file without a transfer.

Subject: 37-2165B Place of Use

Corey,

Attached is a copy of the IDWR GIS map of the place of use for this right. The home you see under construction is now complete and some of the land to be irrigated with this right now lies outside the GIS POU and within the red outline I have added. All of this land is within the SWSW of S. 1. The total area irrigated by this right remains at 6.7A. Do we need to file a transfer application to get approval of this change? Thanks.

Jim
