

MEMORANDUM

TO: Water Right Permit File 65-23684

FROM: Daniel A. Nelson

DATE: October 27, 2017

SUBJECT: Field Examination Required

At the time proof of beneficial use was supplied, there was not adequate aerial photography in the Department's data base or on Google Earth to confirm irrigation. The permit was filed and proof made in 2017, and the latest aerial imagery I could find was 2015. An in-house exam may be possible once 2017 or later aerial imagery is available for this area, but until that imagery is available, a field visit would be needed to properly verify the irrigation use for this permit.
