Dan –

That all makes good sense to me. Thanks.

Terry

Subject: Permit 63-33341

Hello Terry,

During our telephone conversation this morning, I expressed some concerns we were having with the measurement point for this permit being after water is diverted from the pond. I spoke with Shelley, and we decided to not request any additional information at this time. We are going to add a condition that may require better measurement capability in the future if needed. We decide this would be the best route at this time, since the watermaster has already signed off on the way this permit is currently being measured.

However, you may want to let your client know that need to be careful to match water being diverted from the Boise River to the water being diverted for irrigation from the pond. It could avoid issues further down the road. If a complaint is filed, they may need to provide evidence that they are doing exactly what their water right allows.
