MEMORANDUM

Date: June 9, 2017
To: Transfer 81518
From: Michele Edl
Re: Review & Evaluation of Sufficiency of Information

This application for transfer proposes changes to 6 water rights held by the applicant. 4 of the rights will be split to accommodate changes to their POU's. POD changes are proposed for all 6 rights. This application was submitted by Allen Bradbury (project planner, Upper Salmon Basin Watershed Program) on behalf of Pratt Creek Ranch.

Authority to File: Pratt Creek Ranch LP is the right holder-of-record for the 6 rights involved in this transfer. IDSOS lists it with business entity ID# L2132. Phil F. Moulton is listed as a general partner and he signed the transfer application.

Available Lemhi County taxlot information shows that the POU's and the POD are within property held by Pratt Creek Ranch LP.

Water Right Validity: The six water rights which are involved in this transfer are: 74-195, 74-196, 74-753, 74-754, 74-1857 and 74-2019. They were all decreed in the SRBA on 7/9/2007.

Aerial photography shows that the POU's have been regularly irrigated. Forfeiture is not a concern at this time.

POU

Rights 74-195, 74-196, 74-753 and 74-754 will be split by this transfer and companion transfer 81519. The splits are needed to segregate the water which will be delivered through two new pipelines. The southernmost of the two pipelines (also identified as the lower pipeline) will carry 3.87 cfs total from the new, fish-friendly POD to a 188.2-acre PPU. The new PPU is closely equivalent to the existing irrigation but it represents the combined pieces of the six transferred water rights.

POD

The six different, authorized PODs for the six transferred rights will be retired. They will be replaced with a single POD identified by the Office of Species Conservation as LPC-03, which is located upstream of the existing diversions. The new POD is the intake of the lower pipeline. I created the POD shape based on the application maps.

Injury to Other Water Rights: Review staff has no information indicating that other water rights will be injured.

There do not appear to be any other rights which divert from Pratt Creek between the old PODs and the new POD (LPC-03).

The rights will be subject to control by the watermaster of WD#74F-Pratt Creek.

Enlargement of Use: No enlargement is evident through this transfer. Overlapping rights were appropriately split and the transfer will be conditioned with combined limits.

Local Public interest: Review staff has no information to suggest this application is inconsistent with the local public interest.

Beneficial Use/Conservation of Water Resources: The transfer appears consistent with the conservation of water resources in Idaho.

Effect on Economy the Local Area: Review staff has no information to suggest this transfer will negatively impact the economy of the local area.

Effect on Agricultural Base of the Local Area: Review staff has no information to suggest this transfer will negatively impact the agricultural base of the local area.

Review of the application finds there is no clear inconsistency with criteria set forth in Section 42-222 Idaho Code preventing processing of this application.

Re: Pratt Creek Ranch Water Transfer (lower system)

The Upper Salmon Basin Watershed Program is assisting Phil Moulton of Pratt Creek Ranch LP in the attached application for transfer of water rights 74-2019, 74-1857, 74-196, 74-195, 74-753, 74-754. Four of the rights will be split to accommodate the segregation of the rights into two separate systems for irrigation of the entire ranch. This application describes the Lower System.

This application seeks a permissible place-of-use (PPU) for the Pratt Creek Ranch Lower irrigation system. Currently, there are six unscreened diversions located on the ranch which supply water via six ditches from Pratt Creek to the lower part of the ranch. Gravity ditches carry the water to places-of-use (POU) on both sides of the creek to flood irrigation systems. The ranch currently irrigates approximately 189 acres from Pratt Creek from the lower diversions.

This project proposes to install infrastructure in the fall of 2017 to allow more efficient on-farm management of water. Approximately 7,700 feet of new pipeline will be installed with six upwellers for flood irrigation on the north side of the creek. Another 5,400 feet of pipeline will be installed on the southside of the creek to supply handlines.

The six diversions will be consolidated into a single point-of-diversion (POD). The completed project will include a legal fish screen installed by the Idaho Department of Fish and Game. The new PPU would encompass 188.2 acres.
