PROOF ACKNOWLEDGEMENT LETTER

RE: Permit No. 63-34063

Dear Permit Holder(s):

The Department acknowledges receipt of the proof of beneficial use form submitted for the above referenced permit. The next step in the process of developing a water right is for the Department to conduct a field examination to determine and confirm the use being made of the water.

Well construction rules of the Department require additional drilling permit fees in cases where an increased use of water is authorized from wells originally constructed for domestic use of water. This permit identifies diversion of water from a well constructed for domestic use. **Department records indicate that an additional drilling permit fee in the amount of \$125.00 is due based on the non-domestic water use developed under this water right permit.** Failure to pay this fee may be cause for cancellation of your water right permit. Please submit the \$125.00 upgrade fee to the Department referencing drilling permit no. D0053528 and water permit no. 63-34063.

Please be advised that Section 42-248, Idaho Code, requires you or the owner of this water right to maintain current ownership and address records on file with the Department. Forms to file a change of ownership of a water right and/or a change in the address of the water right owner are available from any Department office or at the Department's website at www.idwr.idaho.gov.

If you have any questions concerning the field examination, please contact the Western Region Office of the Department located in Boise at (208) 334-2190.

Sincerely,

Darla Block

MEMORANDUM

TO: Water Right Permit File 63-34063

FROM: Daniel A. Nelson

DATE: May 30, 2017

SUBJECT: Field Examination Required

Water right permit 63-34063 was held for an in-house field examination. The aerial photos available to the Department don't show any irrigation. The satellite imagery does suggest that there could be some irrigation going on at this location, unfortunately, I was unable to determine the extent of irrigation from the satellite imagery. Early spring satellite imagery suggests that the ground is irrigated, but I can't be sure that irrigation did not come from the unreasonable wet spring. We either need to visit this property to determine the extent of irrigation or we need to hold the file until more recent aerial or satellite imagery is available.
