

MEMORANDUM

Date: March 28, 2017
To: Water Right File: 63-31183
From: Michele Edl
Re: Micron Annual Report to IDWR

On March 14, 2017, IDWR received the annual report from Ann Dickey (Environmental Compliance Manager, Micron Technology Inc,) which had been a requirement of permit 63-31183.

On March 27, 2014, I was asked to review the report as a part of a monitoring plan and compliance review project.

Permit 63-31183 required annual reports and those conditions did not have a sunset date. A license was issued for Right 63-31183 on June 23, 2015. The license doesn't require the annual reports, but information that is the basis of the report should be collected and maintained by Micron. One way to ensure that is to continue to collect these annual reports.

Micron is an active party to the SEBGWMA. The data that Micron submits to that entity overlaps but doesn't exactly duplicate the data that is the basis of these annual reports. The recharge amounts are information unique to these annual reports and should be collected and stored by Micron in anticipation of on-demand request related to out of priority use of Right 63-31183.

Today, March 28, 2017, I discussed with Jeff Peppersack (Bureau Chief) whether IDWR should continue to expect and accept these annual reports or should notify Micron personnel that the reports are no longer required. IDWR has decided to continue to accept these annual reports.

I have reviewed the submittals and found that they satisfy the permit requirement for an annual analysis and report. The 2016 report included hydrographs and a table summarizing well/recharge operations, but did not include the support data for the graphs.
