

Wulf & Brian,

Enclosed you will find the transfer application to bring your water rights into compliance. Look through the application and make sure everything looks right to you and the "Water Right Proposed Place of Use" will work for you. If we need to make any adjustments to the application or the water right shape just let me know and we will see what we can do.

Notice the Pivot on the east side of the property does not include the ground being irrigated in the NESW ¼. This end gun will need to be shut off for this portion of its rotation. I have also adjusted the shape in the NESE ¼ to match what you are irrigating, as well as where the BLM boundary is. I know you were curious what the distance was from the edge of your water right, to the edge of what you are irrigating currently in the NWSE ¼, so I went ahead and measure that to be 150 feet on the north side and 170 feet on the south side. I hope this helps you in moving your stops, but if you need any more clarification on this just let me know.

The Fee schedule for a water right falling between 0.00-0.20 CFS is \$200, which is what you fall under. Your water rights are good for more than this amount, but we technically are not transferring the entire water right, just small portions. So luckily you fall under the minimum application fee.

Once you have reviewed this, and if everything looks correct, have your dad sign it and either mail this back to our office, or bring it in personally. You can pay by either cash or check, and amounts would be made out to Idaho Department of Water Resources.

Again, if you have any questions or concerns about the application don't hesitate to give me a call or come by the office. I am more than happy to help you any way I can. Thanks Brian!
