Re: No Access Ranch Transfer Applications

Dear Kerrie,

On behalf of No Access Ranch, the following letter and attachments address the information requested in your letter dated October 18, 2016.

Ground Water Mitigation

- Provide a proposed amended mitigation plan for water right 34-7595. Application 34-13789 will need re-advertised because of changes to the proposed mitigation.

Response: An amended mitigation plan for water right 34-7595 is included as Attachment A. Withdrawal of application 34-13789 is included as Attachment B. As a result of the application withdrawal, the Stacey Ranch East (SRE) transfer is no longer necessary resulting in modifications to the remaining two transfers, which will now be referred to as Stacey Ranch (SR) and Idaho Cowboy Ranch (ICR). Amended transfer applications and a signed request for withdrawal of the SRE transfer application are included in Attachment C. Total filing fees submitted with the original transfer package were \$2,220. Based on the amended transfers and withdrawal of the SRE transfer, total filing fees now calculate to \$1,720. Please refund the applicant the \$500 balance.

Authorized Pond

- Confirm the following actions have been taken, as required by Transfer Approval 5004 and associated settlement agreement, for creation and use of the storage reservoir (pond):
 1. Pond must be constructed by February 28, 2001? No
 2. A measuring device maintained at the point of injection into Warm Springs Creek?
No

3. A measuring device installed on the turnout from Fish Hatchery Canal? Yes
4. The installation of a weir at the inlet and outlet of the pond? Yes
5. Survey results of the pond providing final volume calculations? No
6. Evaluations of whether pond losses exceed the 0.1096 cfs set aside for mitigation?
No

Thank you for your attention to this matter Kerrie. Please contact us with any further questions.

Sincerely,

Lori Graves, Water Rights Specialist
