Thank you.

I liked the extra columns and computations in the 2015 and 2016 reports. So I vote that Brockway Engineering continue to provide them.

And your brief explanation of the significant figures between 2014 and 2015 was the reassurance that I needed to know I was interpreting correctly.

Sincerely,

Michele (with one L please) Edl

Michelle-

The 8/3/2014 and 4/23/15 meter readings were the same as the infiltration basin was turned off on 8/3/2014 and turned back on, on 4/23/15. Although we were not consistent in reporting significant figures for these dates, the meter readings were the same on these two dates. If a new meter were installed, it would start off at 0 acre feet. I do not understand your comment regarding an additional column when comparing the 2015 data with the 2016 data. There are five columns in each Daily Recharge Volume summary sheet, with each sheet reporting the same five metrics. Additional columns were added to the 15/16 data when compared to the 14 data as I choose to show the data computations at my discretion.

Please let me know if you have any additional questions, thanks for your time.

Zach Latham

Dr. Brockway,

I was assigned to review your December 28, 2016 submittal for The Valley Club Inc. As you know, the annual reports are a requirement of Transfer 78255.

Thank you for providing both the 2015 and 2016 annual reports. The water right files are now up to date.

Earlier today I left your office a voice message, but I don't always leave coherent messages, so this email is intended to clarify my phone call and request.

I have a couple questions related to the data. When I compared the 2014 data with the 2015 data, I found that the last reading for 2014 was taken on 8/3/2014 and was 13.2 AF. But the first reading of 2015 taken on 4/23/2015 was 13.23 AF and is a small but unexplained difference.

The 2015 and 2016 data is also presented in additional columns, so I inferred that there may been a meter upgrade sometime between 2014 and 2015 and maybe that small difference is due to a change in equipment and equipment sensitivity or rounding.

When you get a minute, please provide me and the water right files a quick explanation for the difference in the data and in its presentation.

Sincerely,
Michele Edl
