Actually, since the transfer hasn't been approved and if the flow rate and volume remain the same, you can amend this transfer to make the requested changes. We would have to readvertise the transfer, and the additional fee to readvertise is only \$50.00. ESPAM modeling may also be required if the proposed new location moves the POD out of a model cell adjacent to the model cell the current POD is located in.

Subject: Water rights transfer #81110

Bill,

The applicant Southfield Properties would like to move the water right place of use and diversion point proposed in the transfer #81110 to the 80 acres south of the proposed location. We don't necessarily want to retract the transfer. Since the current transfer is not yet complete, what would you suggest the best approach would be? Contingent upon the current water right transfer being completed, would filing a transfer with attached transfer information (from the website) be appropriate?

Thanks

Donell Fluckiger, P.E.
