Re: Water Right Permit 85-15690 – Request for Issuance of License

Dear Shelley:

I am writing on behalf of my client Tammany View 3, Inc. ("TV3"), which is the holder of Water Right Permit 85-15690 ("Permit"). This Permit was reinstated by the Department in September after TV3 submitted its request for reinstatement, a beneficial use field report prepared by a certified water rights examiner and its statement of completion.

Among other things, the beneficial use field exam and other materials submitted to the Department in support of TV3's request for reinstatement of the Permit demonstrate that beneficial use was established as of 2008 based upon construction of two wells, installation of distribution main line and stubbing of each of the thirty-eight lots. The two wells for the project were completed in the summer 2007 as described in the well driller's reports filed with the Department by the driller. These reports certify that the minimum well construction standards were complied with at the time the drilling rig was removed. As such, TV3 requests that the Department issue a license for water right 85-15690 authorizing diversion of water for the purposes and to the extent demonstrated by the beneficial use field exam and indicated on the Permit using the existing wells as the authorized means of diversion.

TV3 wishes to move forward with its project. Given the interval of time since the system was completed, TV3 will need to renew its efforts with the Idaho Department of Environmental Quality to obtain certification of the wells and distribution system as a community water system. These efforts will be facilitated by prompt issuance of the license.
