Dear Mr. Keyes,

Thank you for speaking with me on the telephone today. During our telephone conversation, we agreed to allow you until November 30, 2016 to provide me with pictures of your measurement devices for the pond. As stated in the telephone conversation, I will need pictures of both the measurement device upstream of the pond and downstream of the pond. You also stated, that there is now only one outlet to the pond, so you can place the measurement device anywhere on the pond that would provide an acceptable measurement.

We also spoke about the dimensions and design of various measuring devices. The Bureau of Reclamation Measurement manual has various designs and dimension requirements to construct a standard measurement device. The link to the manual is <https://www.usbr.gov/tsc/techreferences/mands/wmm/> . If you have any further questions, please don't hesitate to contact me.

Thank you.

Hello Dan,

I would like to have my license to irrigate from my pond.

See picture for current set up of water out flow. Spill way.

If possible I would rather not have a measurement device on the pond, It can only get so full, although im not against it. I can do what ever is required as long as it does not cost me a bunch of \$\$\$\$. You can call me or I will call you on Monday to see what my options are.

Cheers Rich Keyes 208 781 0686
