

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES
BENEFICIAL USE FIELD REPORT

A. GENERAL INFORMATION

Permit No: 71-10899
Exam Date: 6/16/2016

1. Current Owner:
SCOTT ELISON And MICHELLE ELISON
3407 MOONLIGHT DR KIMBERLY ID 83341 (661) 978-1851
2. Accompanied by: Scott Elison, Permit Holder
3. **SOURCE:** SALMON RIVER **TRIBUTARY:** SNAKE RIVER

B. OVERLAP REVIEW

1. Other water rights with the same place of use: Permit 71-10900
2. Other water rights with the same point-of-diversion: Permit 71-10898

C. DIVERSION AND DELIVERY SYSTEM**1. LOCATION OF POINT(S) OF DIVERSION:**

SALMON RIVER L2 (NW $\frac{1}{4}$ NE $\frac{1}{4}$ NW $\frac{1}{4}$) Sec. 10, Twp 10N, Rge 13E, B.M. CUSTER County

Method of Determination: Field Observation and GPS

2.

PLACE OF USE: DOMESTIC

Twp	Rge	Sec	NE				NW				SW				SE				Totals
			NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	
10N	13E	10					X L 2												

Method of Determination: Field observation and Aerial Photo

3.

Delivery System Diagram Attached (required). Indicate all major components and distances between components. Indicate weir size/pipe as applicable.

Map Attached Showing Location(s) of point(s) of diversion and place(s) of use (required). Scale must be 1:24,000 or greater.

X

X

Aerial Photo Attached (required for irrigation of 10+ acres).

X

Photo of Diversion and System Attached

4.

Well or Diversion ID No.*	Motor Make	Hp	Motor Serial No.	Pump Make	Pump Serial No. or Discharge Size
N/A	Goulds	1.5	C48C53A06	GT15	Serial #30315J2

D. FLOW MEASUREMENTS

A measurement is not required for domestic use if diversion rate does not exceed 0.24 cfs according to new Beneficial Use Examination Rules dated 3/29/2012

Not required for permits with irrigation less than five (5) acres per new Beneficial Use Examination Rules implemented 3/29/2012

Theoretical yield: $Q = \frac{8.8 \times (HP) \times (EFF)}{H}$

Where: HP = 1.5 HP (acquired from plate on pump)

EFF = Pump Efficiency = 70% (assumed)

H = Total Dynamic Head = (total lift) + (2.31 x operating pressure). Total lift was estimated at 5 ft based on field observations. Operating pressure estimated at 40 psi based on typical lawn sprinkler.

$$H = 5 \text{ ft} + (2.31 \times 40.0 \text{ psi}) = 97.4 \text{ feet}$$

$$Q = \frac{8.8 \times (1.5) \times (0.70)}{97.4} = 9.24$$

$$Q = 0.10 \text{ CFS}$$

Manufacture Pump Efficiency Curves

Where: Based on data acquired from Goulds Pumps for a 1.5 hp motor/pump (model no. GT 15), operating at a discharge pressure of 40 psi and 5 ft of dynamic suction lift will be able to produce 45 GPM (0.10 CFS).

Under either flow analysis, rate exceeds permitted amount of 0.04 CFS, therefore use permitted amount.

E. FLOW CALCULATIONS

Measured Method: None

Additional Computation Sheets
Attached

F. VOLUME CALCULATIONS

Not required for permits with irrigation using natural stream flow from a stream or spring per new Beneficial Use Examination Rules implemented 3/29/2012.

G. NARRATIVE/REMARKS/COMMENTS

Application for Permit 71-10899 was filed on May 17, 2006 by Scott and Michelle Elison for the diversion of 0.04 cfs for domestic use from the Salmon River. The permit was approved on July 26, 2006 and proof of beneficial use was due on or before August 1, 2007. Proof of Beneficial use was submitted on April 2, 2007. On June 16, 2016 I met with Scott Elison to conduct the licensing exam. During my visit Mr. Elison verified the point of diversion and place of use as well as demonstrated the capability of the irrigation system. The system developed under permit 71-10899 consists of a 1.5 HP Goulds pump that diverts water from the Salmon River by the use of a fish screen and a 2" line to a 1.5" intake at the pump and a 1.5" discharge line to the underground irrigation system. The IDF&G provided the fish screen for the applicant's use. Because of the type of fish screen provided by IDF&G for the applicant this satisfies the screening and approach velocity condition requirement at the point of diversion. A theoretical estimate of the system and pump manufacturer data indicates that a 1.5 HP pump can produce up to 0.1 cfs, which exceeds the permitted rate of 0.04 cfs. Beneficial Use Examination Rules states, for irrigated acreage of five (5) acres or less, a diversion rate up to three one-hundredths (0.03) cfs per acre may be allowed on the license to be issued by the Director. It is recommended that license 71-10899 be issued for domestic purposes with a rate of 0.02 cfs. The applicant has an additional permit, 71-10900, for domestic use from ground water for a well located adjacent to the applicant's home. Permit 71-10900 is to be licensed concurrently with this permit. Therefore it is recommended that this right, 71-10899, along with any additional domestic rights, is limited to 13,000 gpd and no more than 0.5 acres of irrigation. During the exam the applicant submitted a change in address form to update department records. The permit was issued with Water District 170 standard conditions for watermaster requirements. At licensing these conditions should be removed as a result of the preliminary order for Water District 170, dated December 10th, 2012, exempting domestic water rights as defined by Idaho Code §§ 42-111 and 42-1401A(11) from watermaster regulation.

Have conditions of permit approval been met? ☒ Yes ☐ No

H. RECOMMENDATIONS**1. Recommended Amounts**

<u>BENEFICIAL USE</u>	<u>PERIOD OF USE</u>	<u>DIVERSION RATE</u>	<u>ANNUAL VOLUME</u>
DOMESTIC	05/01 to 10/31	0.02 CFS	N/A
<u>Totals:</u>		0.020 CFS	

2. Recommended Amendments

☐ Change P.D. as reflected above ☐ Add P.D. as reflected above ☒ None

☐ Change P.U. as reflected above ☐ Add P.U. as reflected above ☒ None
