Boise, ID 83720-0098

RE: Field Examination for Permit 63-33721

Dear Mr. Nelson:

Attached is the completed Beneficial Use Field Report for the above permit in the name of Hoot Nanney Farms Inc. The permit is for irrigation to supplement the diversion rate under water rights 63-2958 and 63-31988.

Based on my field measurements, a licensing amendment will be necessary to correctly locate the new point of diversion. The application for amendment has not been prepared pending IDWR review of the enclosed field exam. The injection and redirection probably need to remain on the license since the new water diverted from the old wells utilizes those locations. The water developed under the new well does not use the injection and redirection locations.

The Department is requested to remove the data logger requirement for diversions from ground water. Both meters that measure ground water diversions have totalizer capability and the water right owner understands the need to record annual diversions and report those diversions if or when required.

Please let me know if you have questions or if I can provide you with any additional information.

Yours truly,
