Kristin:

The acreage is fine.. Because of the concern with enlargement of the ground water rights, there must be defined acreage for a condition that will appear on the approval of the transfer approval. Rod still has freedom to use the water within the combined place of use. This is the same process that is required for ground water and surface water overlaps in the Big Lost Basin. Due to recent activities any combined place of use where the ground water is insufficient to cover the property in its entirety will need to define the ground water acres.

I can send the application to advertising, but it can no further without the map. Hope this answers your questions.

Thank you,

Kerrie Mathews

Good morning,

By my accounts, the ground water rights should add up to 1362 acres: 1253 ac from the group including 33-2117A and 109 ac from 33-2108A. Do you disagree? I am finalizing the map this morning. If there is a reason to exclude 33-2108A, then let me know. I recognize it is supplemental, but it is still a ground water right.

I am a little curious as I have thought about this as to why we have to specify the location of the ground water rights. In a permissible place of use, the objective is to allow greater flexibility as to where to put the water within the boundary. If we identify the ground water rights as pertaining to certain acres within the PPU, will that prevent the owner from having the flexibility that he desires with the PPU? Or can he rotate so long as he provides a new map to IDWR when he makes changes? Can the transfer approval reflect the PPU boundary as the POU with the appropriate acre limitations subject to the locations specified in the ground water irrigation map that we submit?

I would like to maintain as much flexibility as possible.

Subject: Pancheri Transfer

Good Afternoon Kristin:

The Pancheri ground water rights cover 1253 acres, if you add the surface water rights to the ground water rights you end up with 1655 acres. To prevent the appearance of enlargement through this transfer, the Department will require that a separate map indicating the location of ground water use within the place of use be provided.

If you have any questions, please let me know.

Thank you,

Kerrie Mathews
