Attach additional pages if necessary and label it **Part 1A.2**.

Applicant proposes to consolidate the POU of two groups of stacked water rights, both surface and groundwater, and reconfigure the acres to reflect current practices. In addition, this transfer proposes to add two existing PODs to each water right.

Narrative of Proposal

Applicant Pancheri Inc. proposes to update the water rights pertaining to lands near Howe, Idaho.

Existing Water Rights

There are 17 water rights proposed to be included in this transfer. They are grouped with combined limitations based on source and original places of use. Table 1 below divides the water rights based on shared elements and limitations. Group A (referenced on other attachments as SW 33-24 et al), which is all surface water rights that share a Place of Use of 1464 acres, is partially overlapped by Group B (referenced on other attachments as GW 33-2117A et al), which is a group of ground water rights that share a well in Section 14, T5N R29E. Together, they are limited to the irrigation of 1464 acres.

Table 1 Water Rights Proposed to be Transferred

Group C (referenced on other attachments as SW & GW 33-36 et al), pertains to lands directly adjacent to Groups A and B. The irrigation system for all of these lands is already connected through mainline that delivers surface and ground water rights. The current well for the ground water right 33-2108A is

located in Section 33, T6N R29E. This right is a supplemental water right, and will remain with the original surface water rights for delivery. The historical use of this water right will remain the same.

Applicant has installed pivot irrigation systems, graded corners, and made other small changes in past years to reconfigure acres in order to increase efficiency. The proposed place of use reflects the existing irrigation. Total irrigated acres is 1655 amongst all 17 water rights.

Proposed Changes

This transfer proposes to combine the described surface and ground water rights into one Permissible Place of Use (PPU) to reflect the actual irrigation practices occurring. Corners and other small acreages will be formally retired from irrigation. There are no forfeiture concerns, since the water has already been informally moved to other acreages. The final Place of Use description includes 1655 acres irrigable by the water rights. The total change in acreage is only 85 acres by legal description. The three different groups of water rights described above vary in the changed acreages as indicated in Table 2.

In addition, this transfer proposes to combine the two wells currently diverting water under the identified ground water rights and add a third well to the system. The third well is an existing well that currently diverts water under Water Right Nos. 33-2094 and 33-7038. These rights are not included in this transfer.

The surface water rights are only proposed to be changed to update the Place of Use. No changes are proposed to the Points of Diversion for the surface water rights. Proportionate transfer quantities for surface water rights are identified in Tables 3 and 4.

APPLICATION FOR TRANSFER OF WATER RIGHT

PART 3

A. PLAT MAP (See Part 3A of Instructions for application for transfer for complete requirements.)

- ☒ Attach a map of the diversion, measurement, control, and distribution system. Label it **Attachment #7a**.
- ☒ If the transfer application proposes to change the place or purpose of use of an irrigation right attach a Geographic Information System (**GIS**) shape file, or an aerial photo or other image clearly delineating the location and extent of existing acres and changes to the place of use. Label it **Attachment #7b**.

If the place of use currently consists of a permissible place of use, then the attachment is not required if the application contains a clear statement that the boundaries for the place of use are not proposed to be changed by the transfer and the total number of irrigated acres within the place of use before and after the transfer is clearly stated.

If any part of the irrigation water right is leased to the Water Supply Bank, you must also specify the location and number of acres that will remain idled for the duration of the lease contract at the new, proposed place of use.

B. CHANGES IN NATURE OF USE (Water Balance)

- ☐ If you propose to change the nature of use or period of use of all or part of the right(s) listed in this application, attach documentation describing the extent of historic beneficial use of the portion of the right(s) proposed to be changed. Also attach documentation showing that the portion of the right(s) to be changed will not be enlarged in rate, volume, or consumptive use through the proposed change. Label it **Attachment #8a**.

C. PLACE OF USE CHANGES TO SUPPLEMENTAL IRRIGATION RIGHTS

- ☐ If you propose to change the place of use of a supplemental irrigation right, answer below and attach supporting documentation. Label it **Attachment #8b**.

Describe how the supplemental water rights have been used historically in conjunction with other water rights at the existing place of use. Describe the time during the irrigation season that the supplemental rights have been used. Include information about the availability or reliability of the primary right(s) being supplemented, both before and after the change. If the applicant is proposing to change a supplemental irrigation right to a primary right, provide the information required on Part 3B above:

Eastern Snake Plain Aquifer Analysis

The Applicant proposes to combine ground water rights into the same system to share a Permissible Place of Use. The water rights involved in the transfer pertain to two wells, located in Sec 14, T5N R29E (R133, C130) and Sec 33, T6N R29E (R29, C129). An additional well located in Section 29, T6N R29E (R28, C129) is proposed to be included in this diversion system to add redundancy; this well already exists and is a point of diversion for other water rights owned by the applicant. To reflect the proposed changes, the ESPAM 2.1 was used to simulate depletions.

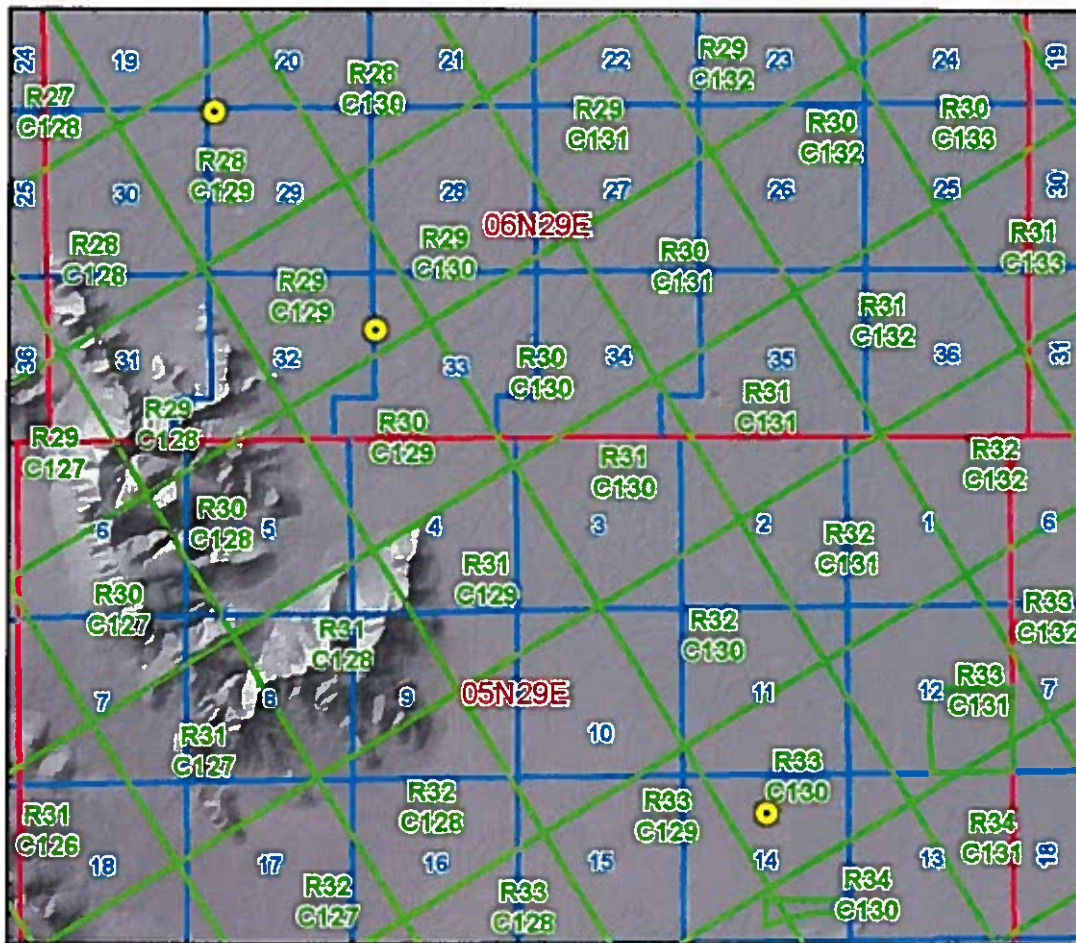

Figure 1 Well Locations

The well in R33 C130 is currently maxed out in capacity and pumping will not increase at that well after this transfer. The ground water rights will likely be diverted from a combination of the approved three well locations. Therefore, the modeling below shows both existing wells and their current water right capacities being transferred to the farthest well in R28, C129 as a worst case scenario.

Figures 2-4 include excerpts from the ESPAM 2.1 simulation. Results show that by transferring 4767 AFA (1589 AF/trimester) to R28 C129, the effects of pumping at that diversion do not exceed 2.0 AF/trimester in any reach of the Snake River. No mitigation is required.
