Subject: Petitions by the above parties for
reconsideration of the "preliminary orders"
issued to:

AD Cattle Co Inc - Permit No. 2-10460

Bigfoot Farms LLC - Permit No. 2-10463

We the undersigned petition the IDWR
for reconsideration of the "preliminary orders"
voiding the above described permits.

It was our understanding that the limiting
factor in regard to these permits was the
canal not being capable of carrying any
additional volume of water than that
which was pumped jointly by all four
applicants. For this reason we did not
respond to the "Notice of Intent to Void"
letters because we were waiting to find out
the results for the Allen Noble Farms Inc canal

Catherine Vandersteldt permits so we could make sure our (all four entities) combined average was as high as possible.

When the field examiners tested each applicants' pump(s) separately, it became apparent that some of the pumps were operating very poorly. After they were examined by the pump company it was determined that they needed significant repair or cleaning (ie. debris in impellers).

We feel that these pumps pumped considerably more during the development period than at the time of the field examination.
