Sherman,

Thanks. That is the exact information I needed. Because the current water use at the bank is non-consumptive, the ground water diversion will not be curtailed. To avoid being listed on future curtailment orders, you may want to revise water right 25-7517 to remove the outside irrigation components. It is also possible to abandon the water right altogether. The current water use at the bank is likely less than 2,500 gallons per day, the minimum threshold for needing a ground water right. If you want to retain the water right, you should consider updating the ownership records by filing the attached form with the appropriate fee (\$25).

I know my phone call about the curtailment order was unexpected. I appreciate your prompt response.

James

James,

I checked with our technician and the well only serves the building cooling system. It is used as condenser water for the chiller and injected back in to the water table as a closed loop. The building drinking water and irrigation are on city water.

Please let me know if there is anything else you need.

Thank you,
Sherman

Subject: 2016 Curtailment Notice

Mr. Allen,

The following link is to a page containing all of the materials relating to the delivery call and curtailment order:
<https://idwr.idaho.gov/News/WaterCalls/Surface%20Coalition%20Call> The document that is most relevant is the May 18, 2016 "Final Order Curtailing Ground Water Rights Junior to February 8, 1989".

The curtailment order does apply to Key Bank's water right 25-7517 (still in the name of Valley Bank Inc.). The order does not apply to non-consumptive uses of water. If the bank can show that it is only using water for the cooling system (through a closed loop or through a diversion/injection system), then the Bank's use of water would be non-consumptive. Please contact me by the end of the week to discuss a plan for resolution.
