Please find enclosed forms and \$275 to change the ownership of several water rights. This ownership change is being driven by the passing of both my mother and father, Helen and Maurice Toler. Their deaths triggered the necessity for me to update many records, these water rights just being an example.

There is no conveyance document involved as this ownership change is basically just a renaming of assets from Mom and Dad's estate, or in the case of the spring rights, from their personal names. Since none of these water rights are being split, nor are they in the water supply bank, there is not a plot map either. Each water right document as it currently exists clearly provides the legal description of the point of diversion and the place of use. None of that is changing.

I do have one question. Water Right 29-11424 is not included in this listing. The document I have on it shows its status as "Withdrawn". Is there any way it can be reinstated to "Active"? If so, what needs to be done? If that can be done, I will request an ownership change for it under a separate cover since it appears the possibility exists that it may be a lost resource.

Thank you very much; I appreciate the service you perform for me.
