

MEMORANDUM

TO: File 75-14606

FROM: Daniel Nelson – Staff Hydrologist

DATE: March 2, 2015

SUBJECT: Field exam required.

This permit was originally scheduled for an in-house field exam. The permit stated that they had ½ acre of property and that they believed they would acquire the other ½ acre of property that they used and maintained. Our tax lot data shows they still only own ½ acre of land.

It is impossible from the mapping to determine if the owner's irrigation pump is used to irrigate the two domestic properties or just the one domestic property. Without visiting the site and confirming whether or not the owner's are still irrigating the full property or not, we cannot make a reasonable determination of where the water is used, or if it needs to be split into separate ownership.

This is a very volatile area, so it is best to perform a field examination on this property to ensure that what is done on this ground is properly recorded.
