DEPARTMENT OF
WATER RESOURCES

12/15/15

Darla,

I apologize for missing the deadline for Statement of Completion. We have one permit # that covers two irrigation wells + two stock water wells. So, I filled out two forms, one for each well. The shape file for 71-10949 needs just a little of adjustment, maybe 2 acres moved from one place to another, in order to compensate for us putting in a small pivot, compared to a handline, and the different location of a pivot barricade. The two stock water wells were originally test wells drilled by independent drilling + were used to justify the drilling of the two irrigation wells. The stock water wells are about 100 ft. from the irrigation wells. The \$275 enclosed fee is intended for both wells, since they are both covered under the same permit + total pumping capacity of 7.8 CFS. I hope this covers the information you need for submission proof of beneficial use. Both wells were pumped for a short period during the irrigation season of 2015. If you have any questions or need any further information, please let me know.

Thank you,
Michael J. Henslee W

P.S. This site is at 7,200 ft. elevation

I think the best time for a field exam could be around the end of May or 1st of June.
