Evaluation of overall mitigation requirements per reach, Steady State and Transient State, and Off-Setting Benefits (Sum of reach debits only where mitigation is required and credits)

Carry out one way analysis. If reach depletions go up, it is a debit. If they go down, it is a credit. Sum all debits, only where mitigation is required (dark yellow), and all credits (light yellow). Mitigation is required for the full amount of the summed values if greater than zero.

Steady state analysis represents permanent mitigation requirements at future steady state (or last timestep from the ESPAM Transfer Tool model run).

Transient state analysis represents mitigation requirements for the worst or maximum time step in the model run.

Evaluation of transient state mitigation requirement is not comprehensive across all time steps. Instead this evaluation finds the maximum stream depletion following the start of the transfer and looks at depletion amounts from that time step. In many instances this depletion is greater than the depletion associated with the steady state condition or final time step. This evaluation is merely an indicator of whether transient depletions must be considered, not an indicator of all transient impacts.

Evaluation of Permanent Mitigation Efforts (non-use, storage consolidation), in Addition to Off-Setting Transfer Benefits - Steady State Evaluation Only

Re: Toeys Transfer

Dear Mr. Cefalo:

This transfer application was previously submitted to IDWR for processing but was returned by IDWR. Corrections have been made to the transfer and the transfer is being re-submitted at this time.

William Toeys desires to transfer 50.0 acres of irrigation water from water rights 35-7632A, 35-13609 and 35-7246M to a proposed well location at NWNW Section 29 Township 6 South Range 29 East.

Water right 35-7632A, 35-13609 and 35-7246M have been leased into the Idaho Water Supply Bank off and on for several years. The current leases contract expires December 31, 2015.

The Toeys have entered into an agreement with the current land owner of the proposed well and new irrigation place of use. Ownership of the water rights will be changed after this transfer is processed and approved by IDWR.

ESPA model analysis of this transfer indicates that no mitigation will be required for this transfer to be approved.

Please copy our office on all correspondence regarding this application.

Sincerely,

Greg Sullivan, M.S., Engineer
