2. 131 Prior to the diversion and use of water under Transfer approval 72809, the right holder shall install and maintain acceptable measuring device(s), including data logger(s), at the authorized point(s) of diversion and in accordance with Department specifications, or shall obtain an approved variance from the Department to determine the amount of water diverted from power records or to maintain an existing measuring device.
3. T19 Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.

Such gains have not been quantified at this time. The right holder retains the right to seek quantification of such gains resulting from Transfer approval 72809. Protestants retain the right to object to the quantification of such gains. If such reach gains are quantified and acknowledged by the Department, credits for such gains shall be available for use only after the Department has implemented a system for administering such credits.

8. T07 The right holder shall accomplish the change authorized by this transfer within one year of the date of this approval.
9. R64 This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the lands above.
10. R43 The right holder shall maintain lockable controlling works of a type approved by the Department in a manner that will provide the watermaster suitable control of the diversion(s).
11. To mitigate for the depletion of water resulting from Transfer Approval 72809, and to prevent injury to senior water right holders, the right holder shall rent water from the water supply bank operated by the Idaho Water Resource Board in the amounts specified below:

Right No.	Rate (cfs)	Volume (AF)	Acres
45-2505	2.44	560.0	140.0
45-7008	0.54	170.0	42.5

Total Acres: 2785

Conditions of Approval:

1. X61 The period of use for the irrigation described in this approval may be extended to a beginning date of 3/15 and an ending date of 11/15 provided that beneficial use of the water can be shown and other elements of the right are not exceeded. The use of water before 4/1 and after 10/31 is subordinate to all water rights having no subordinated early or late irrigation use and a priority date earlier than the date of this approval.
2. T07 The right holder shall accomplish the change authorized by this transfer within one year of the date of this approval.
3. R43 The right holder shall maintain lockable controlling works of a type approved by the Department in a manner that will provide the watermaster suitable control of the diversion(s).
4. R55 This right is for the use of trust water and is subject to review 20 years after the issuance of the permit to determine availability of water and to re-evaluate the public interest.
5. X35 Rights 36-2339 and 36-8403 when combined shall not exceed a total diversion rate of 4.71 cfs, a total annual maximum diversion volume of 1272 af at the field headgate, and the irrigation of 318 acres.
6. 114 The model used to calculate depletion effects and mitigation for the Milner to King Hill reach may also show gains in other reaches of the Snake River. Such gains have not been quantified at this time. The right holder retains the right to seek quantification of such gains resulting from Transfer approval 72809. Protestants retain the right to object to the quantification of such gains. If such reach gains are quantified and acknowledged by the Department, credits for such gains shall be available for use only after the Department has implemented a system for administering such credits.
7. 131 Prior to the diversion and use of water under Transfer approval 72809, the right holder shall install and maintain acceptable measuring device(s), including data logger(s), at the authorized point(s) of diversion and in accordance with Department specifications, or shall obtain an approved variance from the Department to determine the amount of water diverted from power records or to maintain an existing measuring device.
8. R64 This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the lands above.
9. Rights 36-2339, 36-8403, 36-2340, 36-2360, 36-2431, 36-15165, 36-2346, 36-2389, 36-2451, 36-2363, 36-4200, 36-16419, 36-16423, 36-16425, 36-16417, and 36-16421 when combined shall not exceed a total diversion rate of 34.89 cfs, a total annual maximum diversion volume of 8952.0 af at the field headgate, and the irrigation of 2238 acres.
10. To mitigate for the depletion of water resulting from Transfer Approval 72809, and to prevent injury to senior water right holders, the right holder shall rent water from the water supply bank operated by the Idaho Water Resource Board in the amounts specified below:

Right No.	Rate (cfs)	Volume (AF)	Acres
45-2505	2.44	560.0	140.0
45-7008	0.54	170.0	42.5

The rental agreement shall be executed prior to diversion of water under Transfer Approval 72809 and shall remain in effect for one irrigation season.
11. X36 Rights 36-2339, 36-2340, 36-2360, 36-2431, 36-15165, 36-2346, 36-2389, 36-2451, 36-2363, 36-4200, 36-16419, 36-16423, 36-16425, 36-16417, and 36-16421 are also diverted through the points of diversion described above.
12. R05 Use of water under this right will be regulated by a watermaster with responsibility for the distribution of water among appropriators within a water district. At the time of this approval, this water right is within State Water District No. 130.
13. T08 Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.

Evaluation of overall mitigation requirements per reach Steady State and Transient State, and Off-Setting Benefits (Sum of reach debits only where mitigation is required and credits)

Carry out one way analysis. If reach depletions go up, it is a debit, if they go down, it is a credit. Sum all debits, only where mitigation is required (dark yellow), and all credits (light yellow). Mitigation is required for the full amount of the summed values if greater than zero.

Steady state analysis represents permanent mitigation requirements at future steady state (or last timestep from the ESPAM Transfer Tool model run).

Transient state analysis represents mitigation requirements for the worst or maximum time step in the model run.

Evaluation of transient state mitigation requirement is not comprehensive across all time steps. Instead this evaluation finds the maximum stream depletion following the start of the transfer and looks at depletion amounts from that time step. In many instances this depletion is greater than the depletion associated with the steady state condition or final time step. This evaluation is merely an indicator of whether transient depletions must be considered, not an indicator of all transient impacts.

Evaluation of Permanent Mitigation Efforts (non-use, sewage consolidation) in Addition to Off-Setting Transfer Benefits - Steady State Evaluation Only

Evaluation of overall mitigation requirements per reach Steady State and Transient State; and Off-Setting Benefits (Sum of reach debits only where mitigation is required and credits)

Carry out one way analysis. If reach depletions go up, it is a debit, if they go down, it is a credit. Sum all debits, only where mitigation is required (dark yellow), and all credits (light yellow). Mitigation is required for the full amount of the summed values if greater than zero.

Steady state analysis represents permanent mitigation requirements at future steady state (or last timestep from the ESPAM Transfer Tool model run).

Transient state analysis represents mitigation requirements for the worst or maximum time step in the model run.

Evaluation of transient state mitigation requirement is not comprehensive across all time steps. Instead this evaluation finds the maximum stream depletion following the start of the transfer and looks at depletion amounts from that time step. In many instances this depletion is greater than the depletion associated with the steady state condition or final time step. This evaluation is merely an indicator of whether transient depletions must be considered, not an indicator of all transient impacts.

Evaluation of Permanent Mitigation Effects (non-use, acreage consolidation); In Addition to Off-Setting Transfer Benefits - Steady State Evaluation Only

MEMORANDUM

TO: Transfer # 80575 File

FROM: Benny Walker

DATE: December 23, 2015

SUBJECT: Filing Fee

The filing fee of \$2,780.00, for this transfer is based on the total amount of water being transferred, 38.84 cfs. The transfer fee schedule for a transfer involving 19.01-20.00 cfs indicates that the filing fee is \$2,020.00. For each additional 1.0 cfs or part thereof over the first 20.0 cfs is an additional \$40.00. Therefore the fee for the first 20.0 cfs is \$2,020.00 plus \$40.00 for approximately 19.0 additional cfs (19 cfs X \$40 = \$760.00) totals \$2,780.00

Re: Evaluation of Sufficiency of Information Submitted

Application proposes creating a 3,110 acre permissible place of use for 17 ground water irrigation rights. The proposed permissible place of use and points of diversion are located approximately 8.5 -11.5 miles north and 6.2 - 9.7 miles east of Hazelton. The application proposes the diversion of 38.84 cfs from eight existing wells for the irrigation of 2,545.9 acres within the 3,110 acre permissible place of use. The proposed permissible place of use and points of diversion are located within the ESPA. Two groundwater model analyses were performed and included with the transfer. These analyses modeled two worst case scenarios which involved adding points of diversion to right 36-16501 at the outermost located wells in the proposed permissible place of use. Note that the well for water right 36-16501 is in the same model cell as a point of diversion listed on the sixteen other rights. The model analyses showed depletions to hydraulically connected reaches of the Snake River were small enough not to require mitigation.

The place of use and points of diversion are located within Water District 130 so watermaster comments will be requested.

- **Authority to File:**
The applicant is listed as the current owner of the water rights involved with the transfer according to IDWR records. Department records from previous ownership changes for the water rights involved in this transfer included the warranty deeds showing that the applicant is the owner of the proposed permissible place use.
- **Water Right Validity:**
All the rights have been decreed in the SRBA, except for water right 36-8403 which is a license right and not subject to the SRBA. Aerial photography indicates the place of use has been irrigated in recent years.
- **Injury to Other Water Rights:**
None anticipated. The model analysis indicated no mitigation required.
- **Enlargement of Use:**
None anticipated. The water rights will be limited to 2545.9 acres within the 3110 acre permissible place of use.
- **Local Public Interest:**
Application will be subject to public notice and protest.
- **Beneficial Use/Conservation of Water Resources:**
Proposed use is recognized as a beneficial use of water.
- **Effect on Economy of the Local Area:**
None anticipated.
- **Effect of the Agricultural Base of the Local Area:**
None anticipated.

Review of the application finds there is no clear inconsistency with criteria set forth in Section 42-222 Idaho Code preventing processing of this application.

Re: Global AG Properties USA LLC C/O Westchester Group Investment
Management

Dear Mr. Merritt:

Global AG Properties USA LLC desires to create a permissible place of use (PPU) for 17 irrigation water rights and 8 ground water wells. The farm is located in Township 08 South Range 21 East Sections 4, 8, 9, 10, 11, 12, 15 and 16. This farm has a locally known as the Wickel Farm.

It is proposed to create 3,111.0 acre permissible place of use with a 2,545.9 acre place of use (POU). The wells are already hydraulically connected to one another and approved flowmeters have been installed on the wells.

Water has been rented from the Idaho Water Supply Bank for the past several years and applied to acres located in Section 15 within the proposed PPU.

ESPA model was performed for water right 36-16501 (1,231.6 AFA) from Cell 66 49. The analysis is required because water right 36-16501 will be adding 7 additional wells as authorized PODs on the farm. This analysis simulated the worst case scenario of required pumping from furthest distance away wells on the farm. The ESPA model analysis was run twice. Once to Cell 68 50 and once to Cell 68 48. Both model runs indicate that no mitigation will be required for this transfer.

No ESPA model analysis was performed to analyze the addition of the one POD currently listed for 36-16501. No analysis was performed because one of the existing PODs authorized for the 17 other water rights is located inside model Cell 66 49. No modeling is required if the current POD or PODs are within the same or adjacent ESPA model cells.

The ownership, beneficial use and period of use will not be changing with this transfer.
