Subject: Beneficial Use Field Reports 63-31256 Johnson & 63-32236 Johnson Research LLC

Terry,

I am reviewing the exams you provided for licensing Permits 63-31256 and 63-32236. Right 63-31256 is proposed split to show the separate domestic and irrigation of 1 acre from one well and system, and the balance of the right is combined with 63-31256 to provide 47 acres of irrigation through partial pivots and hand lines.

You recommended a permissible place of use of 55 acres for the irrigation system that includes small areas outside the existing sprinkler system on the same parcel of land. I haven't found any imagery that supports the irrigation of the additional acres during the development period of these two permits from approval in 2008 and 2009 until Statement of Completion was filed in 2013. Since the system wasn't developed as a permissible place of use shifting acres from year to year to other areas, the irrigation use should reflect the actual 47 acre system. If you have other information to provide to support the permissible place of use recommendation, please provide it now for licensing review.

The maps provided with these applications include shapes for both the smaller 1 acre irrigation system and the 47 acre irrigation system within the larger 55 acre parcel. Please provide these shapes if they are available.

My recommendations should be completed soon and licensing amendments sent out for both portions of the split right to address the change in nature of use and the addition of Lot 6(NWSW), Section 6, Township 5N, Range 4W in the 47 acre place of use. Please respond within the next 14 days to allow completion of the licensing recommendations.

Thank you for your assistance in this matter.

Pam
