WATER RESOURCES
WESTERN REGION

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES
APPLICATION FOR PERMIT
To appropriate the public waters of the State of Idaho

Ident. No. 67-15138

1. Name of applicant(s) Kirk Chandler And Allis Chandler Phone 208-549-0085
 Name connector (check one): ☐ and ☒ or ☐ and/or
 Mailing address 1227 Devils Elbow RD City Weiser
 State ID Zip 83672 Email kachandler8@hotmail.com
2. Source of water supply Ground Water which is a tributary of _____
3. Location of point(s) of diversion:

TWP	RGE	SEC	Govt Lot	1/4	1/4	1/4	County	Source	Local name or tag #
12N	05W	33			SE	SW	Washington	Ground Water	
12N	05W	33			NE	NW	Washington	Ground Water	
12N	05W	33			SW	NW	Washington	Ground Water	
12N	05W	33			SW	NW	Washington	Ground Water	

4. Water will be used for the following purposes:
 Amount 4.44 cfs for Irrigation purposes from 3/1 to 11/1 (both dates inclusive)
 (cfs or acre-feet per year)
 Amount _____ for _____ purposes from _____ to _____ (both dates inclusive)
 (cfs or acre-feet per year)
 Amount _____ for _____ purposes from _____ to _____ (both dates inclusive)
 (cfs or acre-feet per year)
 Amount _____ for _____ purposes from _____ to _____ (both dates inclusive)
 (cfs or acre-feet per year)
5. Total quantity to be appropriated is (a) 4.44 cfs cubic feet per second (cfs) and/or (b) _____ acre feet per year (af).
6. Proposed diverting works:
 a. Describe type and size of devices used to divert water from the source. Up to four(4) wells with pump to pipeline.

 b. Height of storage dam NA feet; active reservoir capacity NA acre-feet; total reservoir capacity NA acre-feet. If the reservoir will be filled more than once each year, describe the refill plan in item 11. For dams 10 feet or more in height OR reservoirs with a total storage capacity of 50 acre-feet or more, submit a separate Application for Construction or Enlargement of a New or Existing Dam. Application required? ☐ Yes ☒ No
 c. Proposed well diameter is 8 inches; proposed depth of well is 200 feet.
 d. Is ground water with a temperature of greater than 85°F being sought? ☐ Yes ☒ No
 e. If well is already drilled, when? NA; drilling firm NA;
 well was drilled for (well owner) NA; Drilling Permit No. NA.
7. Description of proposed uses (if irrigation only, go to item 8):
 a. Hydropower; show total feet of head and proposed capacity in kW. NA
 b. Stockwatering; list number and kind of livestock. NA
 c. Municipal; complete and attach the Municipal Water Right Application Checklist.
 d. Domestic; show number of households NA
 e. Other; describe fully. NA

8. Description of place of use:

- a. If water is for irrigation, indicate acreage in each subdivision in the tabulation below.
- b. If water is used for other purposes, place a symbol of the use (example: D for Domestic) in the corresponding place of use below.
See instructions for standard symbols.

TWP	RGE	SEC	NE				NW				SW				SE				TOTALS
			NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	
11N	5W	4	24																24
			GL1																
12N	5W	33			23				1	31	35	3	10	15	10	29	26	37	183
12N	5W	34											15						15
																			222

Total number of acres to be irrigated: 85(P) / 137(S) 174(S) KC 1/20/15

9. Describe any other water rights used for the same purposes as described above. Include water delivered by a municipality, canal company, or irrigation district. If this application is for domestic purposes, do you intend to use this water, water from another source, or both, to irrigate your lawn, garden, and/or landscaping?

New acres of irrigation have no other water rights.

10. a. Who owns the property at the point of diversion? Applicant
- b. Who owns the land to be irrigated or place of use? Applicant
- c. If the property is owned by a person other than the applicant, describe the arrangement enabling the applicant to make this filing:

11. Describe your proposal in narrative form, and provide additional explanation for any of the items above. Attach additional pages if necessary.

Drill up to four (4) wells to provide primary groundwater for 85 acres of new irrigation and 149 acres of supplemental irrigation. Supplemental acres are currently irrigated by Sheep Creek water rights, Groundwater, and some Monroe Creek rights.

12. Time required for completion of works and application of water to proposed beneficial use is 5 years (minimum 1 year).

13. **MAP OF PROPOSED PROJECT REQUIRED** - Attach an 8½" x 11" map clearly identifying the proposed point of diversion, place of use, section #, township & range. A photocopy of a USGS 7.5 minute topographic quadrangle map is preferred.

The information contained in this application is true to the best of my knowledge. I understand that any willful misrepresentations made in this application may result in rejection of the application or cancellation of an approval.

RE: Application for Permit No. 67-15138

Dear Legal Notice Department:

Please publish the enclosed legal notice on the dates indicated (once a week for two consecutive weekly issues). If you cannot publish the notice on the proposed dates, please contact us immediately.

An affidavit of publication must be submitted to the Department along with the publication bill. Please send the affidavit and bill to this office before 10/26/2015. Your cooperation is appreciated.

Sincerely,

Rachel Neely
Administrative Assistant

Enclosure(s)

The following application has been filed to appropriate the public waters of the State of Idaho:

Application for Permit No. 67-15138

Dear Applicant(s):

The Department of Water Resources has received your water right application. Please refer to the number referenced above in all future correspondence regarding this application.

A legal notice of the application has been prepared and is scheduled for publication in the UPPER COUNTRY NEWS REPORTER, WEISER SIGNAL on 10/8/2015 and 10/15/2015. Protests to this application may be submitted for a period ending ten (10) days after the second publication.

If the application is protested, you will be sent a copy of each protest. All protests must be resolved before the application can be considered for approval. If the protest(s) cannot be resolved voluntarily, the Department will conduct a conference and/or hearing on the matter.

If the application is not protested, the Department will process your application and notify you of any action taken on the application. If your application is approved, the Department will send you a copy of the permit.

Please contact this office if you have any questions regarding the application.

Sincerely,

Rachel Neely
Administrative Assistant

MEMORANDUM

TO: Application for Permit No. 67-15138

FROM: Phill Hummer

DATE: September 29, 2015

RE: Analysis of Large Diversion Rule 40.05.c-g Information

Kirk Chandler (the applicant) submitted an application for permit requesting 4.40 cfs of ground water to irrigate 85 acres of new land and adding 137 acres to be supplemental land. The supplemental acres are currently irrigated under water rights; 67-700, 67-701, 67-702, 67-703, and 67-7446 which divert surface water from Sheep Creek and Monroe Creek, and 67-2357 which diverts ground water. In phone conversations with Kirk he indicated Sheep Creek and Monroe Creek have not carried enough water to irrigate their crops properly in recent years. During years when the applicant requires the full use of water requested under the new application he will be irrigating 222 acres of crop land. Irrigation projects of this size are termed "large diversion projects" and require additional information about the project and the project area as defined by the Water Appropriation Rule 40, Rule Subsection 040.05 part c through 040.05 part g (Rule 40). This information was requested on 9/9/2015. The applicant responded via email on 9/16/15. The applicants response was evaluated and it was determined the information contained in the response did not satisfy the Rule 40 requirements. The applicant did not supply a map or information regarding the effect the proposed project will have on existing water rights. The applicant did not provide any plans intended to reduce impacts of the project or any information on the properties of the aquifer as it relates to the sufficiency of the water supply. An email was sent on 9/21/15 clarifying the information needed by the department to properly assess large diversion applications. The applicant responded via email on 9/22/15. This response included the necessary information in support of his application required under Rule 40. The following summary explains the applicant's fulfillment of Rule 40.

40.05.c Effect On Existing Water Rights

The applicant submitted a map that shows the wells and springs within a ½ mile radius of the proposed wells. 5 wells are located near the proposed wells. Four are domestic wells that supply water to households on the applicant's property, and the other well is used to supply supplemental water to irrigate 49.7 acres under water right 67-2357. The wells most likely effected by the addition of new wells in the area are owned and used by the applicant. The applicant is aware of the risks associated with the proposed project. The department believes this project poses no significant risk to other senior water users in the area.

40.05.d Sufficiency of Water Supply

The applicant expects to use one miner's inch to the acre over the 240-day irrigation season with a total consumptive use of 3.0 acre-feet per acre on the 85 acres of proposed primary irrigation and expects to use a similar amount of water when supplementing the surface water rights. During a typical season the applicant expects to use supplemental water from June 15th to November 11th, about 153 days of the irrigating season

According to the applicant, a nearby well used for irrigation produces 80 gal/min. However, through conversations with a well driller he expects the proposed wells to produce around 300 to 400 gallons per minute from a depth of 200 to 300 feet. The department has recommended the applicant drill a test well to determine the potential supply rate of the aquifer. The applicant has decided not to drill a test well and understands that if the water supply is inadequate for the proposal, any subsequent license will be limited to the beneficial use developed from the existing water supply.

40.05.e Good Faith

The applicant has communicated with the department that the property to be irrigated has been developed in anticipation of approval of this application. He has built 3 pivots and has hired a company to drill the proposed wells upon approval. The department believes the applicant intends to use the applied for water for the indicated use and has not submitted the application for speculative purposes.

40.05.f Information Relative to Financial Resources

The department did not request proof of financial resources based on the fact the proposal is mostly for supplemental irrigation on an existing farm.

40.05.g Conflict of Interest

The proposed place of diversion and place of use are located on private land and are not within the boundaries of any irrigation district, city limit, tribal reservation, or canal company. The applicant proposes to use ground water for irrigation and does not need to seek comment from the Department of Fish and Game, the Department of Environmental Quality, or any other state or federal agency. The applicant has provided confirmation that the county does not oppose to the applicant developing his private property.

For the reasons discussed, the department has determined the information submitted by the applicant fulfills the Rule 40 requirements. Based on the information provided and the data available to the department, application for permit No. 67-15138 is complete and accurate and will be submitted to be advertised according to Idaho Code § 42-203A.

To: Miller, Nick

Subject: Map with Wells

Nick, Here is the map with the wells and spring that are in the area of the purposed wells. There are no other wells in section 28, 29, 32, 4, or 5. The closet wells that are not in the area are in 34 and 3. The well marked on the west side of 33 is a irrigation well that has a constant flow of around 80 gals. per minute. The other wells marked are domestic wells for the house and stock water.

The water required for the 85 acres of new water right would be the 3 acre feet per acre for the irrigation season. The water for the 137 acres of supplemental water would be the 3 acre feet per acre for some years, but average years we use all the surface water available by the middle of July. The last 3 years we have been completely out of water by June 15th. So I would think that we would need 1.5 to 2 acre feet for those acres.

The available water would be dependent on whether we can find water when we drill the proposed wells. If we do not get the water needed to make developing the wells worth it we would not need the additional water rights. We have been informed by the well driller that from his experience when you drill into basalt rock in our area there is good water there. The well in the north west side of 33 when drilled was at basalt rock when it was drilled, due to a mishap with dropping a sledge hammer down the well we could not drill any further. The driller that exploratory drilled for gold just south of the proposed well of the south west side hit 300 to 400 gals per minute when they drilled into the rock around 200 to 300 feet deep. The proposed wells are in areas that we should hit the basalt rock quite shallow. We are estimating that we would not have to go any deeper than around 350 feet deep. Let me know if you need any additional information.

Please consider letting us drill to see if there is available water needed for the water rights requested.

Thank-you for your help. Kirk Chandler

Subject: Supplemental Information for Application 67-15138
Attachments: GWmap.pdf

Mr. Chandler,

As we discussed on the phone this morning, your email in response to Phill Hummer's September 9, 2015 letter provided some, but not all of the information we need to continue processing your application. Each item requested is listed below along with some description of the information you should submit.

1. Effect on existing water rights. Please print the attached map and note locations of existing wells and springs that fall within the red circles (each circle represents the ½ mile radius from each of the proposed wells). You can either scan and email us the map with the locations, or you can mail it in.
2. Sufficiency of water supply.
 - a. Expected water requirements: The rules require you provide us with an estimate of the water requirements of the proposed project. The application proposes 85 acres of primary irrigation and 137 acres of supplemental irrigation. In order to estimate the diversion and consumptive use expected, we can assume one miner-inch (0.02 cfs) to the acre over the 240-day irrigation season and a total consumptive use of 3.0 acre-feet per acre for the primary acres. We can make a similar assumption about the supplemental acres, but you should provide us an estimate of the average number of days the groundwater would be used on those supplemental acres. This approach would give us the largest estimate of your expected usage, but if you have information that you will be using other than one-inch to the acre (if your system is designed for something more or less) please provide some description of that to improve the estimate of usage. Likewise, if your crops are known to consume more or less than 3.0 acre-feet per acre, please let us know as well.
 - b. Availability of water: To the extent you have information supporting the ability of the aquifer to provide the amount of water you are proposing to use, please provide it. Information such as the productivity of nearby wells is often sufficient. However, if you do not have information about the aquifer, you could propose to drill one or more test wells to obtain that information. Note that a permit to drill a test well does not authorize a well to be completed; the test bore must be abandoned.
3. Good faith, Delay, Speculation. No further information is needed.
4. Financial resources. No further information is needed.
5. Local public interest. No further information is needed.

As I mentioned on the phone today, another option is to reduce the total number of irrigated acres to 200 or less and you would not have to provide the information above. However, in my opinion the information we need isn't difficult to provide and I'd hate to see you give up 22 acres over it.

I realize you are not interested in any further delay, so I doubt it will come into play, but we always have to put a deadline on these requests for information. So, please provide the requested information within the next ninety (90) days or IDWR will either void the application or continue processing it with a 200-acre limitation.

Please feel free to call or email me or Phill if you have further questions.

Thanks,

Nick Miller.

Categories: Red Category

This is the response to the questions asked in the letter you sent concerning the permit application No. 67-15138. Please let me know if this is sufficient to have the permit approved.
Thank-you Kirk Chandler

Department of Water Resources:

Dear Sirs,

I am writing this to address the issues that were requested of me in my application for additional water rights. (Permit No. 67-15138)

First off I would like to put in writing that I put in an application for these requested water rights and additional rights last November 2014. In the spring after the 3 months I was told it would take to get them done I called and they had lost, or didn't know what had happened to them. That put me 3 months behind on the application period. I came to the Western Region office and visited with someone and they told me the project was too big and if I would reduce the acres it would go right through. I did that, I went back over and sat down with them and we filled out the application together, looked up all the existing water rights, put all the requested land in the right section, quarter section, listed what we were wanting to do and where the proposed wells would be. That was July 1st 2015 and Danny and Nick helped me fill everything out and I was told that there would probably be no other information needed because they made sure everything was filled in right. I was told that because I had reduced the acres that it would not be considered a "large diversion project". In talking to Phill on Sept 15th 2015 he said that I would need to answer the requested information, even though most of it is on the existing application.

1. (effect on existing water rights) This was answered in the application. The supplemental water right application is for water that we have a water right out of Monroe creek and Sheep creek. These two sources dry up completely many summers. It does not affect anyone else's rights because we are the last one to use the water on these creeks. Monroe creek irrigation district starts at the bottom of our place and the water applied for is not in that area. The new water rights that we have applied for is on the north and west side of our farm ground and near the proposed wells that we have been waiting to drill since last November when we first put in the original application that was lost.
2. (sufficiency of water supply) The water supply depends on the wells that we have proposed and have been waiting on to drill. We have a well driller that has been waiting since last spring when this application should have been done. This information is already addressed in the application because it states that the water right applied for is from proposed wells.
3. (good faith, delay or speculative purposes) I think that the fact that I have applied for the water right shows good faith. The Delay is all on you in not processing the application, losing it to start with. The speculation is whether we will ever be able to get this done. I have been patient and doing the best I can to work with this department to do this right and it seems like it is getting to the point of, will it ever happen. I have paid the application fee also in good faith that the Water Resource department will process this application in a timely manner.
4. (financial resources) We have been waiting for this to happen. We have the money for the well drilling. If the wells do not provide the needed water we would not go on with the diversion project. We have built 3 pivots in anticipation of the supplemental water right. We would like permission to go ahead and drill to see if the water is there. The well driller has been waiting and was the one who directed us to get the water rights before we drilled.
5. (local and public interest) The land that we have applied for is not in an irrigation district, not in a city, I discussed this with one of the other county commissioners in our meeting on Monday

and the county has no authority over my drilling a well to develop more land on my private property, I don't live on a tribal reservation, the proposed wells are on our land over a mile from the wells of neighbors, this project will improve the wildlife habitat on our ranch, and it will be a benefit to us in making a living and we will make more money and pay more taxes. It is a win win for everyone. I paid the water resource dept. the filing fee which is for the purpose of advertising this application to the public which gives them the right to comment.

In visiting with Phill this morning he said that if I would address these issues listed in the letter (9-9-2015) he would print this response off the email and put it with the application. Please do that and please get this application done as quickly as possible and if possible give us the permission to go ahead and drill the wells to see if there is the water we need to develop the project proposed.

Thank-you for your timely response to this issue, I have been waiting for you to get this done for close to a year now. Please make this a priority.

Thank-you,

Kirk R. Chandler

Re: Application for Permit No. 67-15138

Dear Applicant:

Your recent application for permit regarding the appropriation of ground water for irrigation is being processed. To assist the Idaho Department of Water Resources (IDWR) in completing the initial processing steps, please submit additional information required by IDAPA 37.03.08.040.05 for "large diversion projects." This requirement includes the following items discussed in Water Appropriation Rule 40, Rule Subsections 040.05c through 040.05g (copy attached):

1. effect on existing water rights
2. sufficiency of water supply
3. good faith, delay or speculative purposes
4. financial resources
5. local public interest.

For item G, you only need to seek comments from the governing body of the city and/or county and any irrigation district or canal company within which the proposed project is located. Please provide IDWR with a copy of your comment letter(s) and any response(s) you receive.

Please submit the requested information for application processing to continue. You may seek additional time to provide the information if necessary. Your written response is needed within the next ninety (90) days. The application will be voided without a timely written reply. Refunds are not available for voided applications.

IDWR rules, forms and other information are available on the Internet at www.idwr.idaho.gov. Please contact me at 208-334-2190 if you need more information. Thank you for your attention to these matters.

Sincerely,

Phill Hummer
Water Resource Agent
Idaho Department of Water Resources

Email: phill.hummer@idwr.idaho.gov

Water Appropriation Rules 40.05.c through 40.05.g

c. Information relative to the effect on existing water rights, Section 42-203A(5)(a), Idaho Code, shall be submitted as follows:

i. For applications appropriating springs or surface streams with five (5) or fewer existing users, either the identification number, or the name and address of the user, and the location of the point of diversion and nature of use for each existing water right shall be submitted.

ii. For applications appropriating groundwater, a plat shall be submitted locating the proposed well relative to all existing wells and springs and permitted wells within a one-half mile radius of the proposed well.

iii. Information shall be submitted concerning any design, construction, or operation techniques which will be employed to eliminate or reduce the impact on other water rights.

d. Information relative to sufficiency of water supply, Section 42-203A(5)(b), Idaho Code, shall be submitted as follows:

i. Information shall be submitted on the water requirements of the proposed project, including, but not limited to, the required diversion rate during the peak use period and the average use period, the volume to be diverted per year, the period of year that water is required, and the volume of water that will be consumptively used per year.

ii. Information shall be submitted on the quantity of water available from the source applied for, including, but not limited to, information concerning flow rates for surface water sources available during periods of peak and average project water demand, information concerning the properties of the aquifers that water is to be taken from for groundwater sources, and information on other sources of supply that may be used to supplement the applied for water source.

e. Information relative to good faith, delay, or speculative purposes of the applicant, Section 42-203A(5)(c), Idaho Code, shall be submitted as follows:

i. The applicant shall submit copies of deeds, leases, easements or applications for rights-of-way from federal or state agencies documenting a possessory interest in the lands necessary for all project facilities and the place of use or if such interest can be obtained by eminent domain proceedings the applicant must show that appropriate actions are being taken to obtain the interest. Applicants for hydropower uses shall also submit information required to demonstrate compliance with Sections 42-205 and 42-206, Idaho Code.

ii. The applicant shall submit copies of applications for other needed permits, licenses and approvals, and must keep the department apprised of the status of the applications and any subsequent approvals or denials.

f. Information Relative to Financial Resources, Section 42-203A(5)(d), Idaho Code, shall be submitted as follows:

i. The applicant shall submit a current financial statement certified to show the accuracy of the information contained therein, or a financial commitment letter along with the financial statement of the lender or other evidence to show that it is reasonably probable that financing will be available to appropriate the water and apply it to the beneficial use proposed.

ii. The applicant shall submit plans and specifications along with estimated construction costs for the project works. The plans shall be definite enough to allow for determination of project impacts and implications.

g. Information Relative to Conflict with the Local Public Interest, Section 42-203A(5)(e), Idaho Code, shall be submitted as follows:

The applicant shall seek comment and shall submit all letters of comment on the effects of the construction and operation of the proposed project from the governing body of the city and/or county and tribal reservation within which the point of diversion and place of use are located, the Idaho Department of Fish and Game, the Idaho Department of Environmental Quality, and any irrigation district or canal company within which the proposed project is located and from other entities as determined by the director.
