Re: Review of aerial photography confirms irrigation use

Today, as part of office day duty, I received a phone call from the current owner of the property to which the above water right is appurtenant.

The caller Stephanie Beauchamp had recently spoken to Western Region personnel about the options for protecting the right from forfeiture. She had additional questions about the Water Supply Bank and an Extension of Time to Prevent Forfeiture.

She stated that she and her husband had purchased the property in 2012. And when they attempted to start irrigating they instead developed geysers in the field where the irrigation system had developed holes. They have been unable to repair the system and as a consequence they have not irrigated for several years. I recommended that she and her husband submit an application to lease the right to the Water Supply Bank and gave her a brief description of how the bank worked.

I reviewed the archive of aerial photography and found that the property appeared to have been irrigated in 2010 but it did not appear to have been irrigated from 2011 to present. I have attached a screen shot of the August 2010 irrigation that I found.

The right would be an acceptable lease candidate.
