RE: Petition for reconsideration
Permit 63-33643
Sent by fax 208-334-2348 and regular mail.

Rachael:

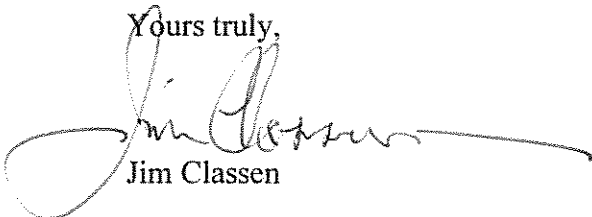

I am requesting reconsideration of the detailed requirements pertaining to the referenced water right.

Under conditions of approval, item 3, "install a lockable device, subject to the approval of the Department, in a manner that will provide the watermaster suitable control of the diversion." This old Boise River meander channel is split into two portions with a culvert with a slide gate to the north and an open culvert to the south leading to one overall pond. Thus with or without the "diversion" drain waters enter the pond and exit unencumbered. There is no need for any water measurement as water will drain to the same level with or without any "diversion." We don't use the slide gate anyway except as an open culvert.

Under conditions of approval, item 4, "provide a means acceptable to the department to measure the amount of water entering the reservoir and the amount of water released from the reservoir." This is a natural drain that has been widened by Idaho Fish & Game forming a ponding area as part of the historical channel or drain sourced primarily by natural drainage from Ray Abbot's farmland. The amount of water in the drain primarily depends upon natural seepage and waste waters. The ponding is essentially a wide spot in the drain with or without any diversion. We do not feel obligated to have measuring devices on drains.

The only reason I applied for this water right was that Rob Whitney thought it would be appropriate to have it of record. It has been constructed since 1998. If you or others need any additional information or questions, please call me. I have had Rex Barrie involved in this matter to ensure we are doing things appropriately.

Yours truly,

Jim Classen
