Subject: 63-32103 Field Exam

Dear Dan:

In response to your letter dated June 16, 2015 regarding the above referenced field exam, this letter responds to your question regarding maximum flow rate required for commercial use. The attached graph provides 24-hour diversions at Sorrento Lactalis for the period of January 2005 through May 2015. Peak 24-hour diversion rate recorded was 2.33 cfs on December 20, 2014. Given the large amount of data contained, I will provide the chart and daily data electronically in Excel format.

Sorrento has not provided me with any additional measurement information for Well No. 1.

Please contact me with any questions or comments.

Sincerely,

A handwritten signature in blue ink, reading "Terry M. Scanlan".

Terry M. Scanlan, P.E., P.G.
