From: Michele Edl

Re: Renumbering

The 18 water right permits listed above are split portions or child permits of Application for Permit 1-7084A. Application 1-7084A was the unprocessed remnant portion of 1-7084. Portions 1-7084B, and 1-7084C have been confirmed by field exams and licenses have been issued to their respective projects.

Each of the above child-permits represents a different hydropower project or potential project which is to be developed on the North Side Canal Company's system. Parent Application for Permit 1-7084A identified a diversion rate of 3200 cfs. Therefore as a group, the 18 child-permits are limited to a combined total diversion rate of 3200 cfs at licensing.

The parent application was advertised some 30 years ago. But because a permit was not issued, there was no timeline set for the development of the 18 proposed hydropower projects. As of the date of this memo, only the hydropower facility associated with 1-10576 has been constructed. Not all of the sites will prove economically feasible to build and the permit holder's legal counsel/representative has indicated to IDWR that some of the child-permits will be relinquished.
