Department of Water Resources
Eastern Region

Dear James Cefalo;

I want to challenge the water rights of the application #79037 which are the water rights of 11-2102, 11-2107A, 11-2107B, 11-2141, and 11-2144 under these questions.

1. What is it going to do the water flow of soda creek 11B?
2. What is it going to do to the aquifer?
3. Have they done any kind of studies on what it's going to do to the aquifer?
4. How big are the casings on the wells, they are going to put in?
5. How deep are the wells going down?
6. Who is monitoring how much water they are pulling out of the wells now?
7. We want to see how much water they are pulling out of the wells now?
8. Why do they want to merge all the water rights together?

We think the water rights should stay with the individual wells and not be allowed to merge together.

I think we have raised to many questions, on what it's going to do to the aquifer levels, and what's its going to do to the water on soda creek 11B.

We strongly object to this proposal!
