To Whom It May Concern,

Listed below are the current steps Silverwood Theme Park has taken to help conserve water followed by future water saving goals.

- Installed automatic timers and rain sensors on irrigation equipment.
- Daily water readings at well locations and wastewater treatment facility to help detect abnormalities and leaks in the water system.
- More hardscape in lieu of normally landscaped and manicured areas.
- Installation of more improved, updated, and efficient equipment in toilet and restroom facilities.
- Use of treated wastewater to irrigate grass and alfalfa fields.

Future Goals:

- Remote monitoring of wells and lift stations to help more closely monitor usage.
- Promote the use of various pool backwash procedures into a useful irrigation system.

Sincerely,

Chris Lempesis
